### **A Practical Introduction to Hardware/Software Codesign** Patrick R.

Schaumont, 2010-09-09 This is a practical book for computer engineers who want to understand or implement hardware/software systems. It focuses on problems that require one to combine hardware design with software design – such problems can be solved with hardware/software codesign. When used properly, hardware/software co- sign works better than hardware design or software design alone: it can improve the overall performance of digital systems, and it can shorten their design time. Hardware/software codesign can help a designer to make trade-offs between the flexibility and the performance of a digital system. To achieve this, a designer needs to combine two radically different ways of design: the sequential way of decomposition in time, using software, with the parallel way of decomposition in space, using hardware. Intended Audience This book assumes that you have a basic understanding of hardware that you are familiar with standard digital hardware components such as registers, logic gates, and components such as multiplexers and arithmetic operators. The book also assumes that you know how to write a program in C. These topics are usually covered in an introductory course on computer engineering or in a combination of courses on digital design and software engineering.

### **Readings in Hardware/Software Co-Design** Giovanni De Micheli, Rolf

Ernst, Wayne Wolf, 2002 This title serves as an introduction and reference for

the field, with the papers that have shaped the hardware/software co-design since its inception in the early 90s.

Electronic Business and Education Wendy Chin, Frederic\*accents Patricelli, V. Milutinovic, 2012-12-06 In order to establish technical prerequisites for efficient electronic business and education on the Internet, appropriate system support is needed as a vital condition for maximization of both short-term and long-term profits. Electronic Business and Education: Recent Advances in Internet Infrastructures discusses current research topics in the domain of system support for e-business and e-education on the Internet, and stresses the synergistic interaction of these two components. Attention is given to both scientific and engineering issues. Electronic Business and Education: Recent Advances in Internet Infrastructures is suitable as a secondary text for a graduate level course and as a reference for researchers and practitioners in industry, particularly in the area of e-business and e-education on the Internet. 'There is no longer any question that the Internet and electronic communication are the major new tools for collaborative advances in the creation of new knowledge and in future learning.' Excerpt from Foreword by Robert C. Richardson, Nobel Laureate 1996, Cornell University, USA

Viral Spiral David Bollier, 2008 From free and open-source software, Creative Commons licenses, Wikipedia, remix music video mashups and open science, digital media has spawned a new sharing economy in competition with

media giants. Media journalist Bollier provides a comprehensive history of the attempts of this new free culture' community to create a digital republic committed to freedom and innovation. Interweaving disparate and eclectic strands of activity with major technological developments, pivotal legal struggles and case studies, Bollier exposes the magical processes of this era.'

### **Research and Practical Issues of Enterprise Information Systems II Volume 2**

Li Xu,A. Min Tjoa,Sohail S. Chaudhry,2007-12-29 This volume presents work from the IFIP TC 8 WG 8.9 International Conference on the Research and Practical Issues of Enterprise Information Systems (CONFENIS 2007).

Enterprise information systems (EIS) have become increasingly popular. EIS integrate and support business processes across functional boundaries in a supply chain environment. In recent years, more and more enterprises worldwide have adopted EIS such as Enterprise Resource Planning (ERP) for running their businesses.

### **Total Solar Eclipses and How to Observe Them** Martin Mobberley,2007-08-03

This is the ultimate, easy-to-read guide for eclipse-chasers which includes everything an eclipse chaser needs. There are some important eclipses coming up in the years ahead and the technology available to amateur astronomers is improving fast. The book provides eclipse virgins with a good feeling for what a trip abroad to an eclipse is like – including a humorous look at all the things that can and have gone wrong. Travel details are included,

essential in these days of high-security. And of course the first part of the book contains a wealth of information about solar eclipses and what can be observed only during a total eclipse.

**Sophisticated Sabotage** Thomas O. McGarity, Sidney A. Shapiro, David Bollier, 2004 *Sophisticated Sabotage: The Intellectual Games Used to Subvert Responsible Regulation* explores regulatory cost-benefit analysis, quantitative risk assessment, the monetization of intangible values, comparative risk assessment and cost-effectiveness analysis, and related sub-disciplines. By explaining the arguments advanced by supporters of these tools, and discussing contrary views through short excerpts from the literature, *Sophisticated Sabotage* describes how dubious risk assessment and economic models have come to dominate regulatory decisionmaking and now stymie urgently needed health, safety and environmental protections. Each excerpt is thoroughly explained and previewed. Each chapter concludes with an extensive annotated listing of further readings. The authors are leading experts in administrative and environmental law.

**Shape Analysis and Retrieval of Multimedia Objects** Maytham H. Safar, Cyrus Shahabi, 2012-12-06 *Shape Analysis and Retrieval of Multimedia Objects* provides a comprehensive survey of the most advanced and powerful shape retrieval techniques used in practice today. In addition, this monograph addresses key methodological issues for evaluation of the shape retrieval methods. *Shape Analysis and Retrieval of Multimedia Objects* is designed to

meet the needs of practitioners and researchers in industry, and graduate-level students in Computer Science.

**Sound, Media, Ecology** Milena Droumeva, Randolph Jordan, 2019-06-27 This volume reads the global urban environment through mediated sonic practices to put a contemporary spin on acoustic ecology's investigations at the intersection of space, cultures, technology, and the senses. Acoustic ecology is an interdisciplinary framework from the 1970s for documenting, analyzing, and transforming sonic environments: an early model of the cross-boundary thinking and multi-modal practices now common across the digital humanities. With the recent emergence of sound studies and the expansion of "ecological" thinking, there is an increased urgency to re-discover and contemporize the acoustic ecology tradition. This book serves as a comprehensive investigation into the ways in which current scholars working with sound are re-inventing acoustic ecology across diverse fields, drawing on acoustic ecology's focus on sensory experience, place, and applied research, as well as attendance to mediatized practices in sounded space. From sounding out the Anthropocene, to rethinking our auditory media landscapes, to exploring citizenship and community, this volume brings the original acoustic ecology problem set into the contemporary landscape of sound studies.

**How to Pass OSCP Series: Windows Privilege Escalation Step-By-Step Guide** Alan Wang, 2020-11-13 This book is the first of a series of How To Pass OSCP books and focus on techniques used in Windows Privilege Escalation. This is a

step-by-step guide that walks you through the whole process of how to escalate privilege in Windows environment using many common techniques. We start by gathering as much information about the target as possible either manually or using automated scripts. Next, we search for misconfigured services or scheduled tasks, insufficient file permission on binaries or services, vulnerable kernel, vulnerable software running with high privileges, sensitive information stored on local files, credential saved in the memory, registry settings that always elevate privileges before executing a binary, hard-coded credential contained in the application configuration files, and many more.

*Distributed Multimedia Retrieval Strategies for Large Scale Networked Systems* Bharadwaj Veeravalli, Gerassimos Barlas, 2006-10-11 Several works on multimedia storage appear in literature today, but very little if any, have been devoted to handling long duration video retrieval, over large scale networks. Distributed retrieval of multimedia documents, especially the long duration documents, is an imperative step in rendering high-quality, high-fidelity, and cost-effective services for network service providers. *Distributed Multimedia Retrieval Strategies for Large Scale Networked Systems* presents an up-to-date research status in the domain of distributed video retrieval. This professional book will include several different techniques that are in place for long duration video retrieval. An experimentally tested technology under the JINI platform, demonstrates a practical working system which serves as a feasibility study, as well as the first step in realizing such a technology.

The Herschel Objects and How to Observe Them James Mullaney, 2007-08-22 Amateur astronomers are always on the lookout for new observing challenges. This exciting book retraces the steps of the greatest visual observer and

celestial explorer who ever lived. This is a practical guide to locating and viewing the most impressive of Herschel's star clusters, nebulae and galaxies, cataloging more than 600 of the brightest objects, and offering detailed descriptions and images of 150 to 200 of the best.

*Heart-life in Song* Frances Harrison Marr, 1883

*The Moon and How to Observe It* Peter Grego, 2005-12-16 This revolutionary new book is written for practical amateur astronomers who not only want to observe, but want to know the details of exactly what they are looking at. The Moon is the most commonly observed of all astronomical objects. This is the first book to deal equally with the Moon itself - its formation, geology, and history - as well as the practical aspects of observation. The concept of the book - and of the series - is to present an up-to-date detailed description of the Moon, including its origins, history, and geology (part one); and then (part two) to consider how best to observe and record it successfully using commercially-available equipment. *The Moon and How to Observe It* is a mine of information for all levels of amateur observers, from the beginner to the experienced

**A Healthy Mouth for Your Baby** , 1995

**The Annenbergs** John E. Cooney, 1982 This is the colorful and dramatic biography of two of America's most controversial entrepreneurs: Moses Louis Annenberg, 'the racing wire king, ' who built his fortune in racketeering, invested it in publishing, and lost much of it in the biggest tax evasion

case in United States history; and his son, Walter, launcher of TV Guide and Seventeen magazines and former ambassador to Great Britain.--Jacket.

Building as Ornament Michiel van Raaij, 2014 The ornament is back in architecture, but now on the scale of the building as a whole. One letter out of the alphabet, a pile of pebbles or a national emblem - the diversity of forms the new architecture can take seems infinite. In this book, Michiel van Raaij, in ten interviews, investigates how this new architecture emerged in the late 1990s and how it developed at the start of the twenty-first century. A new generation of architects sees the design of the upscaled ornament as an inextricable element of their practice. What are their motivations? How do they place their ideas in the tradition of their age-old profession? Michiel van Raaij argues that the design of the ornament, the iconography of the building, is bound by certain rules. A successful ornament represents a virtue and clarifies the function, status, construction, organization and context of the building.--Back cover.

*Buildings Must Die* Stephen Cairns, Jane Margaret Jacobs, 2014 Part memento mori for architecture, and part invocation to reimagine the design values that lay at the heart of its creative purpose. Buildings, although inanimate, are often assumed to have life. And the architect, through the act of design, is assumed to be their conceiver and creator. But what of the death of buildings? What of the decay, deterioration, and destruction to which they are inevitably subject? And what might such endings mean for architecture's

sense of itself? In *Buildings Must Die*, Stephen Cairns and Jane Jacobs look awry at core architectural concerns. They examine spalling concrete and creeping rust, contemplate ruins old and new, and pick through the rubble of earthquake-shattered churches, imploded housing projects, and demolished Brutalist office buildings. Their investigation of the death of buildings reorders architectural notions of creativity, reshapes architecture's preoccupation with good form, loosens its vanities of durability, and expands its sense of value. It does so not to kill off architecture as we know it, but to rethink its agency and its capacity to make worlds differently. Cairns and Jacobs offer an original contemplation of architecture that draws on theories of waste and value. Their richly illustrated case studies of building deaths include the planned and the unintended, the lamented and the celebrated. They take us from Moline to Christchurch, from London to Bangkok, from Tokyo to Paris. And they feature the work of such architects as Eero Saarinen, Carlo Scarpa, Cedric Price, Arata Isozaki, Rem Koolhaas and François Roche. *Buildings Must Die* is both a memento mori for architecture and a call to to reimagine the design values that lay at the heart of its creative purpose.
