The Archaeology of Political Spaces Dominik Bonatz, 2014-04-01 This book, consisting of 12 contributions, amalgamates the most recent results from archaeological research in the Upper Mesopotamian piedmont. Under the growing influence of expanding territorial states which had become established during the 2nd millennium BC, this region experienced a substantial change in social and political life during that time. The discussion is centered around settlement shapes, developments in the material culture, as well as written documents that attest to this change. In summary, this book emphasizes the significant role of archaeological research in the reconstruction of models concerning the formation and transformation of political space in the ancient world.

Aspekte des Menschseins im Alten Mesopotamien Ulrike Steinert, 2012-02-17 Rooted in Assyriology with a strong interdisciplinary outlook, this book offers the first comprehensive study of ancient Mesopotamian notions of the human person, including semantic analyses of Akkadian terms for body parts and multiple aspects of the self.

The Campaigns of Sargon II, King of Assyria, 721–705 B.C. Sarah C. Melville, 2016-07-27 Backed by an unparalleled military force, Sargon II outwitted and outfought powerful competitors to extend Assyrian territory and secure his throne. As Sarah C. Melville shows through a detailed analysis of each of his campaigns, the king used his army not just to conquer but also to ensure regional security, manage his empire's resources, and support his political agenda. Under his leadership, skilled chariotry, cavalry, and infantry excelled in all types of terrain against an array of culturally diverse enemies. This book represents the first in-depth military study of the great Assyrian king. Drawing extensively from original sources, including cuneiform inscriptions, the letters of Sargon and his officials, archival documents, and monumental art, Melville presents Sargon's achievements as king, diplomat, and conqueror. Contrary to the stereotype of the brutal Assyrian despot, Sargon applied force selectively, with deliberate economy, and as only one of several possible ways to deal with external threat or to exploit opportunity. The Campaigns of Sargon II demonstrates how Sargon changed the geopolitical dynamics in the Near East, inspired a period of cultural florescence, established long-lasting Assyrian supremacy, and became one of the most influential kings of the ancient world.

Esther's Revenge at Susa Stephanie Dalley, 2007-11-29 Why are the names of the chief characters in the biblical Book of Esther those of Mesopotamian deities? Stephanie Dalley argues that the narrative reflects real happenings in seventh-century Assyria, where the widespread belief that revenge belongs to the gods explains why Assyrian kings described punitive campaigns as divine acts, leading to the mythologizing of certain historical events. Ashurbanipal's sack of Susa, led by the deities Ishtar and Marduk, underlies the Hebrew story of Esther, and that story contains traces of the cultic calendar of Ishtar-of-Nineveh. Dalley traces the way in which the long-term settlement of 'lost tribes' in Assyria, revealed by the fruits of excavation in Iraq and Syria, inspired a blend of pagan and Jewish traditions.

Handbook of Research on Artificial Intelligence Applications in the Aviation and Aerospace Industries Shmelova, Tetiana, Sikirda, Yuliya, Sterenharz, Arnold, 2019-10-11 With the emergence of smart technology and automated systems in today's world, artificial intelligence (AI) is being incorporated into an array of professions. The aviation and aerospace industry, specifically, is

a field that has seen the successful implementation of early stages of automation in daily flight operations through flight management systems and autopilot. However, the effectiveness of aviation systems and the provision of flight safety still depend primarily upon the reliability of aviation specialists and human decision making. The Handbook of Research on Artificial Intelligence Applications in the Aviation and Aerospace Industries is a pivotal reference source that explores best practices for AI implementation in aviation to enhance security and the ability to learn, improve, and predict. While highlighting topics such as computer-aided design, automated systems, and human factors, this publication explores the enhancement of global aviation security as well as the methods of modern information systems in the aeronautics industry. This book is ideally designed for pilots, scientists, engineers, aviation operators, air crash investigators, teachers, academicians, researchers, and students seeking current research on the application of AI in the field of aviation.

A Biblical Hebrew to English Concordance Bob MacDonald, 2019-06-13 How do we see the decisions made by a translator of an ancient tongue? This volume contains every word in the Hebrew Bible, in Hebrew and the English equivalent for each word as

translated. The glosses provided are for a close translation for the Music. The sequence presented is by Hebrew stem, Hebrew word form, canonical sequence, chapter, verse, and word sequence. In principle, the entire translation can be reconstructed from this data. The draft agreement of the translation with itself (concord) was aided by computer assisted pattern recognition. This volume is a searchable reference book. It makes the decisions of the translator as transparent as possible. We can dig deep into the translation process and be rewarded with the treasury of this beloved text. A Biblical Hebrew to English Concordance is volume 8 of the series, The Hebrew Bible and Its Music.
