Cigarette Nation Daniel J. Robinson,2021-02-05 In the 1950s, the causal link between smoking and lung cancer surfaced in medical journals and mainstream media. Yet the best years for the Canadian cigarette industry were still to come, as per capita cigarette consumption rose steadily in the 1960s and 1970s. In *Cigarette Nation*, Daniel Robinson examines the vibrant and contentious history of smoking to discover why Canadians continued to light up despite the publicized health risks. Highlighting the prolific marketing and advertising practices that helped make smoking a staple of everyday life, Robinson explores socio-cultural aspects of cigarette use from the 1930s to the 1950s and recounts the views and actions of tobacco executives, government officials, and Canadian smokers as they responded to mounting evidence that cigarette use was harmful. The persistence of smoking owes to such factors as product development, marketing and retailing innovation, public relations, sponsored science, and government inaction. Domestic and international tobacco firms worked to furnish Canadian smokers with hope and doubt: hope in the form of reassuring marketing, as seen with light and mild cigarette brands, and doubt by means of disinformation campaigns attacking medical research and press accounts that aligned cigarettes with serious disease. Drawing on a wide range of primary sources, including thousands of industry records released during a landmark tobacco class-action trial in 2015, *Cigarette Nation* documents in rich detail the history of one of Canada's foremost public health issues.

The Science of Michael Crichton Kevin R. Grazier,2008-02-09 Wherever the cutting edge of

science goes, Michael Crichton is there. From dinosaur cloning to global warming, nanotechnology to time travel, animal behavior to human genetics, Crichton always takes us to the cutting edge of science and then pushes the envelope. *The Science of Michael Crichton* examines the amazing inventions of Crichton's books and lifts up the hood, revealing the science underneath. In intelligent and well-thought essays, scholars and experts decide what Crichton gets right and what he gets wrong. They examine which Crichton imaginings are feasible and which are just plain impossible. Scenarios examined include whether dinosaurs can be cloned, if nanotechnological particles can evolve intelligence, and if we can go back in time.

**Quantitative Psychology** M. Nowakowska,2000-04-01 Examining selected statistical and modeling approaches in psychology, the book concentrates on the topics of mental test theory and theory of measurement. The main objective is not only to present a critical view of the approaches suggested up until now, but also their reinterpretation, extension and enrichment by new theories and concepts, for example, formal theories of semiotics and knowledge, and a unifying theory of actions. The book also shows a relation between test theory and the foundations of fuzzy set theory. It presents new models of measurement tools and new measurement theories of concepts such as objective and subjective time, risk or utility, and discusses the cognitive foundations of these theories, namely the theory of perception and observability.
