Accelerators for Convolutional Neural Networks Arslan Munir, Joonho Kong, Mahmood Azhar Qureshi, 2023-10-16

Accelerators for Convolutional Neural Networks Comprehensive and thorough resource exploring different types of convolutional neural networks and complementary accelerators Accelerators for Convolutional Neural Networks provides basic deep learning knowledge and instructive content to build up convolutional neural network (CNN) accelerators for the Internet of things (IoT) and edge computing practitioners, elucidating compressive coding for CNNs, presenting a two-step lossless input feature maps compression method, discussing arithmetic coding -based lossless weights compression method and the design of an associated decoding method, describing contemporary sparse CNNs that consider sparsity in both weights and activation maps, and discussing hardware/software co-design and co-scheduling techniques that can lead to better optimization and utilization of the available hardware resources for CNN acceleration. The first part of the book provides an overview of CNNs along with the composition and parameters of different contemporary CNN models. Later chapters focus on compressive coding for CNNs and the design of dense CNN accelerators. The book also provides directions for future research and development for CNN accelerators. Other sample topics covered in Accelerators for Convolutional Neural Networks include: How to apply arithmetic coding and decoding with range scaling for lossless weight compression for 5-bit CNN weights to deploy CNNs in extremely resource-constrained systems State-of-the-art research surrounding dense CNN accelerators, which are mostly based on systolic arrays or parallel multiply-accumulate (MAC) arrays iMAC dense CNN accelerator, which combines image-to-column (im2col) and general matrix multiplication (GEMM) hardware acceleration Multi-threaded, low-cost, log-based processing element (PE) core, instances of which are stacked in a spatial grid to engender NeuroMAX dense accelerator Sparse-PE, a multi-threaded and flexible CNN PE core that exploits sparsity in both weights and activation maps, instances of which can be stacked in a spatial grid for engendering sparse CNN accelerators For researchers in AI, computer vision, computer architecture, and embedded systems, along with graduate and senior undergraduate students in related programs of study, Accelerators for Convolutional Neural Networks is an essential resource to understanding the many facets of the subject and relevant applications.

Concrete Admixtures Handbook, 2nd Ed. V.S. Ramachandran, 1996-12-31 Since the publication of the first edition ten years ago, significant developments have occurred in the use of admixtures in concrete. Eight new chapters and a full update of the preceding ten chapters bring this book up to date; reflecting the relative advances made in the science and technology of different groups of admixtures. The increased role and development of admixtures in concrete technology is evidenced by a number of conferences, publications, and novel admixtures available in the market place. These developments in the field caused the modification of many chapters in the first edition in order to reflect the advances. Although individual chapters refer to standards and specifications of admixtures, those only interested in the standards or techniques used in investigating admixtures will find the second chapter (Research Technologies, Standards, and Specifications) useful. Admixtures are not as inert as may be presumed. They may chemically interact with the constituents of concrete and affect the properties of the fresh and hardened concrete and its durability. The third chapter deals with these aspects. It was important to devote a chapter to recent attempts in developing new admixtures.

IBM Real Time Compression Appliance Application Integration Guide Roland Tretau, Misa Miletic, Steven Pemberton, Tom Provost, Teddy Setiawan, IBM Redbooks, 2012-07-18 Continuing its commitment to developing and delivering industry-leading storage technologies, IBM® is introducing the IBM Real-time Compression Appliances for NAS, an innovative new storage offering that delivers essential storage efficiency technologies, combined with exceptional ease of use and performance. In an era when the amount of information, particularly in unstructured files, is exploding, but budgets for storing that information are stagnant, IBM Real-time Compression technology offers a powerful tool for better information management, protection, and access. IBM Real-time Compression can help slow the growth of storage acquisition, reducing storage costs while simplifying both operations and management. It also enables organizations to keep more data available for use rather than storing it offsite or on harder-to-access tape, so they can support improved analytics and decision making. IBM Real-time Compression Appliances provide online storage optimization through real-time data compression, delivering dramatic cost reduction without performance degradation. This IBM Redbooks® publication is an easy-to-follow guide that describes how to design solutions successfully using IBM Real-time Compression Appliances (IBM RTCAs). It explains best practices for RTCA solution design, application integration, and practical RTCA use cases. This is a companion book to Introduction to IBM Real-time Compression Appliances, SG24-7953.

Tunnel Visions Michael Riordan, Lillian Hoddeson, Adrienne W. Kolb, 2015-11-20 In October 1993 the US Congress terminated the Superconducting Super Collider at the time the largest basic-science project ever attempted, with a total cost estimated to exceed \$10 billion. Its termination was a watershed event a pivot point not only in the history of physics but also for science in general. Tunnel Visions follows the evolution of the endeavor from its origins in the Reagan Administration's military buildup of the early 1980s to its post-Cold War demise a decade later. The failure of the SSC raises the question of whether Big Science has become too big and expensive; can scientists and their government backers effectively manage such enormous undertakings? The case of the Super Collider offers important lessons about the conditions required to build and sustain a large scientific laboratory, and the rise and fall of the SSC also serves as a cautionary tale about the long-term viability of a research community that comes to depend as much as did US high-energy physics upon a single experimental facility of such an unprecedented scale. Riordan, Hoddeson, and Kolb have written the definitive history of the SSC.

On Beyond Uranium Sigurd Hofmann,2018-10-08 In the early nineteenth century chemists knew of the existence of ninety-two chemical elements, from Hydrogen to Uranium. For nearly forty years scientists thought they knew the content of our planet and all of its contents. In the late 1930s the world of chemical science began to discover elements beyond Uranium - the 'transuranics'. These new, super-heavy elements are probably not found in nature at all but can be detected, if only for a few fractions of a second, in precisely designed experiments using powerful nuclear tools. *On Beyond Uranium: Journey to the End of the Periodic Table* is full of exciting new concepts and tells the story of the author's quest to discover elements never before known to man.

The effectiveness of EU research and innovation proposals Great Britain: Parliament: House of Lords: European Union Committee,2013-04-30 Research and innovation (R&I) is crucial to boost economic growth. However, in recent years, the EU's competitiveness has been increasingly threatened by R&I efforts in emerging economies. In 2010 the Commission and Member States unveiled Europe 2020 as a new strategy for growth and Horizon 2020, its flagship R&I programme. Consideration of the budget for Horizon 2020 is still underway, and the Committee urges that it be increased, or at the very least maintained at its current level. During 2012, the Committee examined a number of proposals for projects and strategies which contained a strong emphasis on R&I and identified a number of cross-cutting issues including: concerns about the effectiveness of impact assessments; a lack of information about monitoring and evaluation of projects; and the importance of stakeholder consultation and private sector participation. This report provides a more in-depth analysis of these issues and how they relate to the Commission's R&I strategy. It is agreed with the Commission that a focus on 'excellence' in R&I proposals offers the best chance of growth through R&I. To this end more work should be done to ensure consistency in this area, and realistic expectations for output of R&I projects. The bureaucracy and complexity of EU R&I programmes acts as a barrier to private sector participation, especially for Small and Medium Sized Enterprises (SMEs) without the resources to navigate complicated and inflexible funding processes. The long 'time-to-grant' period presents a further obstacle. The Government should highlight the opportunities to UK businesses, and continue strengthening their support structures for those businesses wishing to participate

Superconductivity, Magnetism and Magnets Lannie K. Tran,2006 Superconductivity is the ability of certain materials to conduct electrical current with no resistance and extremely low losses. High temperature superconductors, such as $\text{La}_{2-x}\text{Sr}_x\text{CuO}_x$ ($T_c=40\text{K}$) and $\text{YBa}_2\text{Cu}_3\text{O}_{7-x}$ ($T_c=90\text{K}$), were discovered in 1987 and have been actively studied since. In spite of an intense, world-wide, research effort during this time, a complete understanding of the copper oxide (cuprate) materials is still lacking. Many fundamental questions are unanswered, particularly the mechanism by which high- T_c superconductivity occurs. More broadly, the cuprates are in a class of solids with strong electron-electron interactions. An understanding of such strongly correlated solids is perhaps the major unsolved problem of condensed matter physics with over ten thousand researchers working on this topic. High- T_c superconductors also have significant potential for applications in technologies ranging from electric power generation and transmission to digital electronics. This ability to carry large amounts of current can be applied to electric power devices such as motors and generators, and to electricity transmission in power lines. For example, superconductors can carry as much as 100 times the amount of electricity of ordinary copper or aluminium wires of the same size. Many universities, research institutes and companies are working to develop high- T_c superconductivity applications and considerable progress has been made. This volume brings together new leading-edge research in the field.

Fusion Reactor Operated by the Accelerator Dolya Sergey,2015-02-02 Fusion Reactor to produce energy without nuclear waste. The total energy release in the (D, T) reaction is 17.6 MeV. A 100% interaction of deuterium and tritium nuclei in the target ensures the energy release $W = 17.6 \cdot 10^6 \cdot 1.5 \cdot 10^{14} = 3.5 \cdot 10^{21}$ eV or approximately 560 J. Assuming that one gram of TNT releases 4 kJ of energy, the energy of a microburst in this case will be equal to 140 mg of TNT. When the accelerator is operated in the continuous mode, $f_{0in} = 2.4 \cdot 10^7$ tube segments can be accelerated per one second. If each segment releases 560 J of energy during the interaction with the deuterium-tritium target, the total energy release will be greater than 13 GJ / s or 13 GW.

Repowering Cities Sara Hughes,2019-11-15 City governments are rapidly becoming society's problem solvers. As Sara Hughes shows, nowhere is this more evident than in New York City, Los Angeles, and Toronto, where the cities' governments are taking on the challenge of addressing climate change. *Repowering Cities* focuses on the specific issue of reducing urban greenhouse gas (GHG) emissions, and develops a new framework for distinguishing analytically and empirically the policy agendas city governments develop for reducing GHG emissions, the governing strategies they use to implement these agendas, and the direct and catalytic means by which they contribute to climate change mitigation. Hughes uses her framework to assess the successes and failures experienced in New York City, Los Angeles, and Toronto as those agenda-setting cities have addressed climate change. She then identifies strategies for moving from incremental to transformative change by pinpointing governing strategies able to mobilize the needed resources and actors, build participatory institutions, create capacity for climate-smart governance, and broaden coalitions for urban climate change policy.
