Empirical Research towards a Relevance Assessment of Software Clones Saman Bazrafshan, 2017-06-30 Redundancies in program source code - software clones - are a common phenomenon. Although it is often claimed that software clones decrease the maintainability of software systems and need to be managed, research in the last couple of years showed that not all clones can be considered harmful. A sophisticated assessment of the relevance of software clones and a cost-benefit analysis of clone management is needed to gain a better understanding of cloning and whether it is truly a harmful phenomenon. This thesis introduces techniques to model, analyze, and evaluate versatile aspects of software clone evolution within the history of a system. We present a mapping of non-identical clones across multiple versions of a system, that avoids possible ambiguities of previous approaches. Though processing more data to determine the context of each clone to avoid an ambiguous mapping, the approach is shown to be efficient and applicable to large systems for a retrospective analysis of software clone evolution. The approach has been used in several studies to gain insights into the phenomenon of cloning in open-source as well as industrial software systems. Our results show that non-identical clones require more attention regarding clone management compared to identical clones as they are the dominating clone type for the main share of our subject systems. Using the evolution model to investigate costs and benefits of refactorings that remove clones, we conclude that clone removals could not reduce maintenance costs for most systems under study.

Evaluation of Novel Approaches to Software

Engineering Leszek A. Maciaszek, Joaquim Filipe, 2015-12-09 This book constitutes the thoroughly refereed proceedings of the 9th International Conference on Evaluation of Novel Approaches to Software Engineering, ENASE 2014, held in Lisbon, Portugal, in April 2014. The 11 full papers presented were carefully

reviewed and selected from 58 submissions. The papers reflect a growing effort to increase the dissemination of new results among researchers and professionals related to evaluation of novel approaches to software engineering. By comparing novel approaches with established traditional practices and by evaluating them against software quality criteria, the ENASE conferences advance knowledge and research in software engineering, identify most hopeful trends, and propose new directions for consideration by researchers and practitioners involved in large-scale software development and integration.

Search-Based Software Engineering Aldeida

Aleti, Annibale Panichella, 2020-09-30 This book constitutes the refereed proceedings of the 12th International Symposium on Search-Based Software Engineering, SSBSE 2020, held in Bari, Italy, in October 2020. The 13 research papers and 5 short papers presented together with 1 keynote were carefully reviewed and selected from 34 submissions. SBSE is a research area focused on the formulation of software engineering problems as search problems, and the subsequent use of complex heuristic techniques to attain optimal solutions to such problems. A wealth of engineering challenges - from test generation, to design refactoring, to process organization - can be solved efficiently through the application of automated optimization techniques. SBSE is a growing field - sitting at the crossroads between AI, machine learning, and software engineering - and SBSE techniques have begun to attain human-competitive results. Due to the Corona pandemic SSBSE 2020 was held as a virtual event.

Mudah Membuat Referensi & Bibliografi Rudy Agung Nugroho, M. Si., Ph.D, 2015-02-04 Banyak piranti lunak yang memudahkan untuk membuat sitasi, daftar referensi dan daftar pustaka. Perangkat lunak seperti word processor (misal Microsoft Words), JabRef, Zotero, Mendeley, dan EndNote tersedia baik gratis maupun berbayar untuk manajemen referensi dan bibliografi. Sayangnya program aplikasi tersebut belum banyak dikenal oleh para peneliti, pengajar, dan mahasiswa di Indonesia. Untuk membagi informasi tentang program-program tersebut, buku tentang “Mudah membuat referensi dan bibliografi” ini ditulis. Buku ini disusun sebagai dorongan untuk memudahkan manajemen referensi dan bibliografi, serta menambah pengetahuan mahasiswa maupun pengajar yang melakukan penulisan manuskrip untuk jurnal, laporan skripsi hingga disertasi, mengelola pustaka dan sumber informasi. How To Typeset Your Project Report In LATEX Aniruddha Subhashchandra Rumale, Abhidnya Aniruddha Rumale, This book is useful for people in engineering and education for writing project reports, seminars, conference/research papers. LATEX is becoming more popular day by day due to its excellent typesetting and ease of use. But there is no good book available in the market which can talk in terms of the need of the student and/or researchers. This book is a ready reckoner for typesetting a good report/book using LATEX. It covers all necessary and essential information of LATEX required to typeset a good report/book. While typesetting our reports/books, we found that, out of 2600 packages, we hardly used not more than 20 packages. And, if the report/book is heavy in the text then many time not more than 5 packages are ever required to typeset it. This showed us a definite structure to follow for typesetting a report/book.
