### **Programming GPS and OpenStreetMap Applications with Java** Kristof

Beiglböck,2012-01-27 Written by an expert in the development of GPS systems with digital maps and navigation, Programming GPS and OpenStreetMap Applications with Java: The RealObject Application Framework provides a concrete paradigm for object-oriented modeling and programming. It presents a thorough introduction to the use of available global positioning data for the development of applications involving digital maps. The author first describes the different formats of GPS data and digital maps and shows how to use recorded GPS traces to replay and display this data on a digital map. Then, he works through in detail the processing steps of obtaining dedicated data from OpenStreetMaps and how to extract a network for a simple navigation application. For each topic covered—GPS data, OpenStreetMaps, and navigation—Java code is developed that can easily be adapted to the readers' needs and locality. Finally, all components are put together in a sample computer-game application modeled on the well-known board game, Scotland Yard. The computer game is intended to be a basis from which readers can develop and customize their own application for their desired geographical area. The developed application can be published on the Internet and made available for interactive multiplayer competition. This book provides a fun and interesting way to learn distributed programming with Java and real-world data. Open-source software is available on a companion website at [www.roaf.de](http://www.roaf.de)

**Opportunities and Constraints of Land Management in Local and Regional  
Development** Erwin Hepperle, Jenny Paulsson, Vida Maliene, Reinfried  
Mansberger, Anka Lisec, Sonia Guelton, 2018-09-17 Land Management is normally  
embedded in a complex legal context, which frequently consists of  
contradictory objectives, such as: strengthening of rural areas, satisfying  
the need for affordable living and commercial space, protecting environment  
and health, supporting transport infrastructure development, and preserving  
the landscape. Land management can be understood as a process that comprises  
coordination of such activities while managing the use and the development of  
land resources. It can be constrained by the land use specifications  
resulting from spatial planning process. Along with this, the legal framework  
often contains generally formulated concepts and open standards, which  
provide a range of opportunities for realization while balancing the  
different interests. In this process it is important if and how both  
constraints and opportunities are recognised by the actors. In this volume  
this topic is examined from various aspects: first the problems in promoting  
mutual understanding between researchers and the general public, but also  
among scientists of different disciplines; second the success requirements of  
land management instruments as well as unfortunate experience caused by land  
use changes; third covering land management costs by absorbing value increase  
and other trade off aspects; and fourth supporting land management by  
providing geodata with low-cost methods.

Mapping and Spatial Analysis of Socio-economic and Environmental Indicators

for Sustainable Development Noamen Rebai, Mohamed Mastere, 2019-08-01 This book presents most recent research studies on mapping and spatial analysis of socio-economic and environmental indicators used by various national and international contributors to regional development projects. It gathers the best contributions to the 1st International Conference on Mapping and Spatial Analysis of Socio-Economic and Environmental Indicators for the Local and Regional Sustainable Development. The conference was held in southern Tunisia, Tataouine in March 2015. The research studies focused on generating and analyzing indicators in various domains of Agriculture, Energy, Industry, Tourism, Transport, Urban Planning, Exploitation of Natural Resources, Infrastructure, Health, Environment, Education, Information and Communication Technologies, Social Affairs and Employability, and Culture and Sport. Socio-economic and environmental indicators are important in regional development plans and strategies as they allow to observe and analyze changes in the economic growth and to measure their impact on the environment and on social networks/daily life of citizens. On the basis of well-defined geomatic approaches, and particularly, through sophisticated digital mapping and spatio-temporal analyses, authors focused on retrieving indicators to evaluate the exploitation rate of natural resources, intensity of the energy consumption in various economic sector, net migratory flows, quality checking of the air in urban areas, adaptation to climate change, and vulnerability of the coastal domain and risk of marine submersion due to sea-level rise. The book is of interest not only to investors and contributors to regional development projects, but also to all relevant policy makers.
