Providing an accessible introduction to agrarian political economy, he shows clearly how the argument for bringing class back in provides an alternative to inherited conceptions of the agrarian question. He also ably illustrates what is at stake in different ways of thinking about class dynamics and the effects of agrarian change in today's globalized world. Financing Metropolitan Governments in Developing Countries Roy W. Bahl,Johannes F. Linn,Deborah L. Wetzel,2013 The economic activity that drives growth in developing countries is heavily concentrated in cities. Catchphrases such as "metropolitan areas are the engines that pull the national economy" turn out to be fairly accurate. But the same advantages of metropolitan areas that draw investment also draw migrants who need jobs and housing, lead to demands for better infrastructure and social services, and result in increased congestion, environmental harm, and social problems. The challenges for metropolitan public finance are to capture a share of the economic growth to adequately finance new and growing expenditures and to organize governance so that services can be delivered in a cost-effective way, giving the local population a voice in fiscal decision making. At the same time, care must be taken to avoid overregulation and overtaxation, which will hamper the now quite mobile economic engine of private investment and entrepreneurial initiative. Metropolitan planning has become a reality in most large urban areas, even though the planning agencies are often ineffective in moving things forward and in linking their plans with the fiscal and financial realities of metropolitan government. A growing number of success stories in metropolitan finance and management, together with accumulated experience and proper efforts and support, could be extended to a broader array of forward-looking programs to address the growing public service needs of metropolitan-area populations. Nevertheless, sweeping metropolitan-area fiscal reforms have been few and far between; the urban policy reform agenda is still a long one; and there is a reasonable prospect that closing the gaps between what we know how to do and what is actually being done will continue to be difficult and slow. This book identifies the most important issues in metropolitan governance and finance in developing countries, describes the practice, explores the gap between practice and what theory suggests should be done, and lays out the reform paths that might be considered. Part of the solution will rest in rethinking expenditure assignments and instruments of finance. The "right" approach also will depend on the flexibility of political leaders to relinquish some control in order to find a better solution to the metropolitan finance problem.

Forest Hydrology Devendra Amatya,Thomas Williams,Leon Bren,Carmen de Jong,2016-09-14 Forests cover approximately 26% of the world's land surface area and represent a distinct biotic community. They interact with water and soil in a variety of ways, providing canopy surfaces which trap precipitation and allow evaporation back into the atmosphere, thus regulating how much water reaches the forest floor as through fall, as well as pull water from the soil for transpiration. The discipline forest hydrology has been developed throughout the 20th century. During that time human intervention in natural landscapes has increased, and land use and management practices have intensified. The book will be useful for graduate students, professionals, land managers, practitioners, and researchers with a good understanding of the basic principles of hydrology and hydrologic processes.

New Ecologies for the Twenty-First Century Associate Professor of Political Science Arun Agrawal,2014-05-21 Annotation In Kumaon in northern India, villagers set hundreds of forest fires in the early 1920s, protesting the colonial British state's regulations to protect the environment. Yet by the 1990s, they had begun to conserve their forests carefully. In his innovative historical and political study, Arun Agrawal analyzes this striking transformation. He describes and explains the emergence of environmental identities and changes in state-locality relations and shows how the two are related. In so doing, he demonstrates that scholarship on common property, political ecology, and feminist environmentalism can be combined--in an approach he calls environmentality--to better understand changes in conservation efforts. Such an understanding is relevant far beyond Kumaon: local populations in more than fifty countries are engaged in similar efforts to protect their environmental resources.Agrawal brings environment and development studies, new institutional economics, and Foucauldian theories of power and subjectivity to bear on his ethnographical and historical research. He visited nearly forty villages in Kumaon, where he assessed the state of village forests, interviewed hundreds of Kumaonis, and examined local records. Drawing on his extensive fieldwork and archival research, he shows how decentralization strategies change relations between states and localities, community decision makers and common residents, and individuals and the environment. In exploring these changes and their significance, Agrawal establishes that theories of environmental politics are enriched by attention to the interconnections between power, knowledge, institutions, and subjectivities.

Shark Utilization, Marketing and Trade Stefania Vannuccini,1999 Sharks are only a small proportion of world recorded fish landings, but they are a versatile and valuable resource.
