**Real-World Flash Game Development** Christopher Griffith,2012-11-12 Your deadline just got moved up. Your artist has never worked with Flash before. Your inner programmer is telling you that no OOP is a big Oops! Any Flash developer can share similar tales of woe. This book breaks down the process of Flash game development into simple, approachable steps. Never heard of a game loop before? No idea what a design pattern is? No problem! Chris Griffith gives you real-world expertise, and real-world code that you can use in your own games. Griffith has been building games in Flash long enough to know what works and what doesn't. He shows you what you need to know to get the job done. Griffith covers Flash for the everyday developer. The average Flash developer doesn't have luxurious timelines, employers who understand the value of reusability, or the help of an information architect to design a usable experience. This book helps bridge the gap for these coders who may be used to C++, Java, or C# and want to move over to Flash. Griffith covers real-world scenarios pulled from his own experiences developing games for over 10 years in the industry. The 2nd edition will include: completely new game examples on more advanced topics like 3D; more robust physics and collision detection; and mobile device coverage with Android platform development for us on phones and tablets. Also coverage of the new features available in Flash CS5, Flash Player 10.1, and AIR 2.0 that can be used for game development. The associated web site for the book: [www.flashgamebook.com](http://www.flashgamebook.com) gets close to 1,000 visits a month. On the site, readers can find all the source code for the examples, news on industry happenings, updates and special offers, and a discussion forum to ask questions and share ideas.

*Our School* Sam Chaltain,2014-03-01 Almost every major American city is experimenting with school choice, a deeply controversial idea that is dramatically reshaping public education. Will the wider array of school options help parents and educators identify better strategies for helping all children learn? Or will the high stakes of the marketplace end up privatizing this most public of institutions? Education activist Sam Chaltain believes that before we can answer these questions, we must put a human face on the modern landscape of teaching and learning. *Our School* documents a year in the life of two schools in the nation's capital, one a new charter school just opening its doors, the other a neighborhood school that first opened in 1924. Chaltain weaves together the observations and emotions of the people whose lives intersect there, and the triumphs and the challenges they experience. The result is an unsettling, complex portrayal of American public education. *Our School* is important reading for educational policymakers, administrators, parents, the media, and anyone who aspires to be a teacher.

*Edgar Allan Poe, Eureka, and Scientific Imagination* David N. Stamos, 2017-02-28  
Explores the science and creative process behind Poe's cosmological treatise. Silver Winner for Philosophy, 2017 Foreword INDIES Book of the Year Awards In 1848, almost a year and a half before Edgar Allan Poe died at the age of forty, his book *Eureka* was published. In it, he weaved together his scientific speculations about the universe with his own literary theory, theology, and philosophy of science. Although Poe himself considered it to be his magnum opus, *Eureka* has mostly been overlooked or underappreciated, sometimes even to the point of being thought an elaborate hoax. Remarkably, however, in *Eureka* Poe anticipated at least nine major theories and developments in twentieth-century science, including the Big Bang theory, multiverse theory, and the solution to Olbers' paradox. In this book—the first devoted specifically to Poe's science side—David N. Stamos, a philosopher of science, combines scientific background with analysis of Poe's life and work to highlight the creative and scientific achievements of this text. He examines Poe's literary theory, theology, and intellectual development, and then compares Poe's understanding of science with that of scientists and philosophers from his own time to the present. Next, Stamos pieces together and clarifies Poe's theory of scientific imagination, which he then attempts to update and defend by providing numerous case studies of eureka moments in modern science and by seeking insights from comparative biography and psychology, cognitive science, neuroscience, and evolution. David N. Stamos teaches philosophy at York University in Toronto. He is the author of several books, including *Darwin and the Nature of Species*, also published by SUNY Press.
