Narrating Locative Media Vasileios N. Delioglani, 2023-10-30 This book offers a multidisciplinary approach to locative media, concentrating on specific authors and practitioners whose works exist in print and digital manifestations. The book shapes the discourse for an extensive theorization of locative media works from a narrative perspective. It investigates how different genres — print novels, fictional and non-fictional locative narratives, locative games, and audio texts — are affected by locative media practice. Part I examines print manifestations of locative media in William Gibson's fiction. Part II discusses e-book and audio book locative narrative experimentations, suggesting ways to create and categorize locative texts. Drawing on hypertext theory, Part III views Niantic locative games as an instantiation of locative media storytelling practice that challenges digital narrativity. This study captures a transition from a print-based textuality to a digital locative textuality and culture, and proposes flexible innovative models of interpreting narrative textual forms emerging from the convergence of locative and narrative media.

Critics of Enlightenment Rationalism Gene Callahan, Kenneth B. McIntyre, 2020-05-13 This book provides an overview of some of the most important critics of "Enlightenment rationalism." The subjects of the volume—including, among others, Burke, Kierkegaard, Nietzsche, T.S. Eliot, Wittgenstein, Heidegger, C.S. Lewis, Gabriel Marcel, Russell Kirk, and Jane Jacobs—do not share a philosophical tradition as much as a skeptical disposition toward the notion, common among modern thinkers, that there is only one standard of rationality or reasonableness, and that that one standard is or ought to be taken from the presuppositions, methods, and logic of the natural sciences. The essays on each thinker are intended not merely to offer a commentary on that thinker, but also to place that thinker in the context of this larger stream of anti-rationalist thought. Thus, while this volume is not a history of anti-rationalist thought, it may contain the intimations of such a history.

Nobel Universal Graphical Language Milan Randić, 2010-05-24 Nobel is a pictographic language based on some 120 basic signs and many arrows of different shape that are mutually combined. It is named after Alfred Nobel (1833-1896), Swedish chemist and industrialist, inventor of dynamite, who left most of his fortune to a foundation that annually gives awards to individuals whose work is characterized as greatest benefit to mankind, known as Nobel Prizes. Besides the awards for sciences and literature significantly, Alfred Nobel included, among others, a prize for peace

(that besides individuals, also organizations may obtain). Although it would be utopian to believe that human conflicts could be avoided if communication tools would improve, the emergence of universal languages certainly cannot make the situation worse! Universal languages are a communication tool, which makes it possible for people of no common language to communicate. They are graphic, but they should be distinguished from picture writings, which only passively offer information on some event or give messages. Universal languages have more similarity with the sign languages that are used for people who lost hearing or the sign language of American Plains Indians, who spoke different languages and could communicate by sign language that they developed. However, written language has some advantages over hand sign languages in that one can communicate at a great distance, particularly today in the age of fax and computer communications, and that one can leave messages for posterity. This is not the place to argue for or against the promise of written sign languages. Graphic (written) sign languages exist today, and the best known are Chinese characters used in China and Japan. The problem with Chinese characters is that there are too many characters and it is difficult to learn so many. It takes years for children in China and Japan to learn so many different characters, and the task would be even harder for grown people to learn if they have not done this when young. Nobel is designed to remove this difficulty and is based on the following requirements: 1. SMALL NUMBER OF BASIC SIGNS 2. SIGNS SHOULD BE EASY TO RECOGNIZE 3. SIGNS SHOULD BE EASY TO REPRODUCE 4. COMBINATIONS LIMITED TO THREE SIGNS 5. COMPLEMENTARY We have already mentioned that Nobel uses about 120 basic signs, which can be viewed as a small number, particularly in view of over 100 signs of Nobel that are so obvious that they can be easily absorbed. The other requirements are also very important. There are many signs that can be easily recognized, but in order to be acceptable for Nobel, they also need to be easily reproduced, because that will facilitate communication. Also, when making combinations of signs, one has to make some restriction in order to maintain clarity, so we decided to have no more than three signs combined into single word. Finally, the last requirement, that of complementarities, needs some explanation. Besides having signs that one can easily recognize and easily draw, one needs some structure to be embedded into composition of signs that facilitates one to remember and learn signs easily. We refer to this structure as complementary or, broadly speaking, associational, and what it implies is that words and objects that are related should have related signs. Thus, for example, pairs of words like man-woman, cat-dog, coffee-tea, good-bad, love-hate, etc., should have signs that are in some opposition, while words like smoke-flame-fire, tree-wood-forest, water-sea-ocean, good-better-best should have signs that are in competition. With this in mind when one sees and learns the basic signs, the meaning of many combinations of signs can be in advance anticipated. This helps one to learn Nobel rather fast; not months, not weeks, perhaps not even days, but a couple of hours may suffice that one may learn hundreds and hundreds of words. In this respect, Nobel may be unique among languages written, spoken of,

Inside Jokes Matthew M. Hurley,Daniel C. Dennett,Reginald B. Adams, Jr.,2011-03-04 An evolutionary and cognitive account of the science behind why we crack up—“one of the most complex and sophisticated humor theories ever presented” (Evolutionary Psychology). Some things are funny—jokes, puns, sitcoms, Charlie Chaplin, The Far Side, Malvolio with his yellow garters crossed—but why? Why does humor exist in the first place? Why do we spend so much of our time passing on amusing anecdotes, making wisecracks, watching The Simpsons? In Inside Jokes, Matthew Hurley, Daniel Dennett, and Reginald Adams offer an evolutionary and cognitive perspective. Humor, they propose, evolved out of a computational problem that arose when our long-ago ancestors were furnished with open-ended thinking. Mother Nature—aka natural selection—cannot just order the brain to find and fix all our time-pressured misleaps and near-misses. She has to bribe the brain with pleasure. So we find them funny. This wired-in source of pleasure has been tickled relentlessly by humorists over the centuries, and we have become addicted to the endogenous mind candy that is humor.

Compression reduces the file size, making it easier to share and download. Can I fill out forms in a PDF file? Yes, most PDF viewers/editors like Adobe Acrobat, Preview (on Mac), or various online tools allow you to fill out forms in PDF files by selecting text fields and entering information. Are there any restrictions when working with PDFs? Some PDFs might have restrictions set by their creator, such as password protection, editing restrictions, or print restrictions. Breaking these restrictions might require specific software or tools, which may or may not be legal depending on the circumstances and local laws.
