*A Call to Arms* Maury Klein,2013-07-16 The colossal scale of World War II required a mobilization effort greater than anything attempted in all of the world's history. The United States had to fight a war across two oceans and three continents--and to do so, it had to build and equip a military that was all but nonexistent before the war began. Never in the nation's history did it have to create, outfit, transport, and supply huge armies, navies, and air forces on so many distant and disparate fronts. The Axis powers might have fielded better-trained soldiers, better weapons, and better tanks and aircraft, but they could not match American productivity. The United States buried its enemies in aircraft, ships, tanks, and guns; in this sense, American industry and American workers, won World War II. The scale of the effort was titanic, and the result historic. Not only did it determine the outcome of the war, but it transformed the American economy and society. Maury Klein's *A Call to Arms* is the definitive narrative history of this epic struggle--told by one of America's greatest historians of business and economics--and renders the transformation of America with a depth and vividness never available before.

**Natural Resources in Afghanistan** John F. Shroder,2014-06-04 Natural Resources in Afghanistan: Geographic and Geologic Perspectives on Centuries of Conflict details Afghanistan's physical geography — namely climate, soils, vegetation, water, hazards, and basic geologic background and terrain landforms — together with details of its rich natural resources, ethnic problems, and relevant past histories. The book couples these details with the challenges of environmental degradation and new environmental management and protection, all of which are considered finally in both pessimistic and optimistic modes. The reader comes away with a nuanced understanding of the issues that are likely to have great affect for this pivotal region of the world for decades to come. With an estimated \$1-3 trillion dollars of ore in the ground, and multiple cross-reinforcing cancellations of big Asian power machinations (China, India, Iran, Pakistan), Afghanistan has an opportunity to gain more economic independence. At the same time, however, historic forces of negativity also pull it back toward the chaos and uncertainty that has defined the country and constrained its economic progress for decades. Authored by the world's foremost expert on the

geology and geomorphology of Afghanistan and its lucrative natural resources Aids in the understanding of the physical environment, natural hazards, climate-change situations, and natural resources in one of the most geographically diverse and dangerous terrains in the world Provides new concepts of resource-corridor development in a country with no indigenous expertise of its resources

*Critics of Enlightenment Rationalism* Gene Callahan,Kenneth B. McIntyre,2020-05-13 This book provides an overview of some of the most important critics of "Enlightenment rationalism." The subjects of the volume—including, among others, Burke, Kierkegaard, Nietzsche, T.S. Eliot, Wittgenstein, Heidegger, C.S. Lewis, Gabriel Marcel, Russell Kirk, and Jane Jacobs—do not share a philosophical tradition as much as a skeptical disposition toward the notion, common among modern thinkers, that there is only one standard of rationality or reasonableness, and that that one standard is or ought to be taken from the presuppositions, methods, and logic of the natural sciences. The essays on each thinker are intended not merely to offer a commentary on that thinker, but also to place that thinker in the context of this larger stream of anti-rationalist thought. Thus, while this volume is not a history of anti-rationalist thought, it may contain the intimations of such a history.

The Natural History of Earth Richard John Huggett,2006-09-27 Using a broad selection of classic and current sources, *The Natural History of the Earth* probes selected discussions within biology, climatology, geology, and geomorphology and explores a selection of debates about Earth and life history, considering their origins and their present state-of-play. After outlining the arguments, placing them in an historical context and indicating their significance, the book goes on to deal with specific debates. In the geosphere section, topics covered include geological processes, the bombardment hypothesis, frigid climates and cataclysmic floods, and in the section concerning the biosphere, the topics covered include evolutionary patterns, mass extinctions, patterns in life's history and life-environment connections. Written in a clear and accessible style, this volume will interest Earth and life scientists, physical geographers and any informed person fascinated by long-term Earth history. This accessible volume is illustrated throughout with over fifty informative diagrams, photographs, tables and over 700 references.

Humean Nature Neil Sinhababu,2017 Neil Sinhababu defends the Humean Theory of Motivation, according to which desire drives all human action and practical reasoning. Desire motivates us to pursue its object. It makes thoughts of its object pleasant or unpleasant. It focuses attention on its object. Its effects are amplified by vivid representations of its object. These aspects of desire explain why motivation usually accompanies moral belief, how intentions shape our planning, how we exercise willpower, what human selves are, how action can express emotion, why we procrastinate, and how we daydream. Some philosophers claim that the Humean Theory can't explain such phenomena. In fact, it provides better explanations than rival theories can. The Humean Theory has revolutionary consequences for ethics. It shows that currently popular theories leave humans incapable of making moral judgments, and suggests an alternative that upholds moral objectivity while explaining moral concepts in terms of our feelings.--

**Neo-Aristotelian Perspectives on Contemporary Science** William M.R. Simpson,Robert C. Koons,Nicholas J. Teh,2017-10-19 The last two decades have seen two significant trends emerging within the philosophy of science: the rapid development and focus on the philosophy of the specialised sciences, and a resurgence of Aristotelian metaphysics, much of which is concerned with the possibility of emergence, as well as the ontological status and indispensability of dispositions and powers in science. Despite these recent trends, few Aristotelian metaphysicians have engaged directly with the philosophy of the specialised sciences. Additionally, the relationship between fundamental Aristotelian concepts—such as hylomorphism, substance, and faculties—and contemporary science has yet to receive a critical and systematic treatment. Neo-Aristotelian Perspectives on Contemporary Science aims to fill this gap in the literature by bringing together essays on the relationship between Aristotelianism and science that cut across interdisciplinary boundaries. The chapters in this volume are divided into two main sections covering the philosophy of physics and the philosophy of the life sciences. Featuring original contributions from distinguished and early-career scholars, this book will be of interest to specialists in analytical metaphysics and the philosophy of science.
