- **The Semantic Web – ISWC 2020** Jeff Z. Pan,Valentina Tamma,Claudia d'Amato,Krzysztof Janowicz,Bo Fu,Axel Polleres,Oshani Seneviratne,Lalana Kagal,2020-10-31 The two volume set LNCS 12506 and 12507 constitutes the proceedings of the 19th International Semantic Web Conference, ISWC 2020, which was planned to take place in Athens, Greece, during November 2-6, 2020. The conference changed to a virtual format due to the COVID-19 pandemic. The papers included in this volume deal with the latest advances in fundamental research, innovative technology, and applications of the Semantic Web, linked data, knowledge graphs, and knowledge processing on the Web. They were carefully reviewed and selected for inclusion in the proceedings as follows: Part I: Features 38 papers from the research track which were accepted from 170 submissions; Part II: Includes 22 papers from the resources track which were accepted from 71 submissions; and 21 papers in the in-use track, which had a total of 46 submissions. - **Fluid Simulation for Computer Graphics** Robert Bridson,2015-09-18 A practical introduction, the second edition of Fluid Simulation for Computer Graphics shows you how to animate fully three-dimensional incompressible flow. It covers all the aspects of fluid simulation, from the mathematics and algorithms to implementation, while making revisions and updates to reflect changes in the field since the first edition.

Highlights of the Second Edition New chapters on level sets and vortex methods Emphasizes hybrid particle–voxel methods, now the industry standard approach Covers the latest algorithms and techniques, including: fluid surface reconstruction from particles; accurate, viscous free surfaces for buckling, coiling, and rotating liquids; and enhanced turbulence for smoke animation Adds new discussions on meshing, particles, and vortex methods The book changes the order of topics as they appeared in the first edition to make more sense when reading the first time through. It also contains several updates by distilling author Robert Bridson's experience in the visual effects industry to highlight the most important points in fluid simulation. It gives you an understanding of how the components of fluid simulation work as well as the tools for creating your own animations.

- **State of the art in Biometrics** Jucheng Yang,Loris Nanni,2011-07-27 Biometric recognition is one of the most widely studied problems in computer science. The use of biometrics techniques, such as face, fingerprints, iris and ears is a solution for obtaining a secure personal identification. However, the old biometrics identification techniques are out of date. This goal of this book is to provide the reader with the most up to date research performed in biometric recognition and descript some novel methods of biometrics, emphasis on the state of the art skills. The book consists of 15 chapters, each focusing on a most up to date issue. The chapters are divided into five sections- fingerprint recognition, face recognition, iris recognition, other biometrics and biometrics security. The book was reviewed by editors Dr. Jucheng Yang and Dr. Loris Nanni. We deeply appreciate the efforts of our guest editors: Dr. Girija Chetty, Dr. Norman Poh, Dr. Jianjiang Feng, Dr. Dongsun Park and Dr. Sook Yoon, as well as a number of anonymous reviewers

- *Redesigning Leadership* John Maeda,2011-04-25 Lessons for a new generation of leaders on teamwork, meetings, conversations, free food, social media, apologizing, and other topics. When designer and computer scientist John Maeda was tapped to be president of the celebrated Rhode Island School of Design in 2008, he had to learn how to be a leader quickly. He had to transform himself from a tenured professor—with a love of argument for argument's sake and the freedom to experiment—into the head of a hierarchical organization. The professor is free to speak his mind against "the man." The college president is "the

man." Maeda has had to teach himself, through trial and error, about leadership. In Redesigning Leadership, he shares his learning process. Maeda, writing as an artist and designer, a technologist, and a professor, discusses intuition and risk-taking, "transparency," and all the things that a conversation can do that an email can't. In his transition from MIT to RISD he finds that the most effective way to pull people together is not social networking but free food. Leading a team? The best way for a leader to leverage the collective power of a team is to reveal his or her own humanity. Asked if he has stopped designing, Maeda replied (via Twitter) "I'm designing how to talk about/with/for our #RISD community." Maeda's creative nature makes him a different sort of leader—one who prizes experimentation, honest critique, and learning as you go. With Redesigning Leadership, he uses his experience to reveal a new model of leadership for the next generation of leaders.

- **A Note Of Madness** Tabitha Suzuma,2011-12-31 Life as a student is good for Flynn. As one of the top pianists at the Royal College of Music, he has been put forward for an important concert, the opportunity of a lifetime.But beneath the surface, things are changing. On a good day he feels full of energy and life, but on a bad day being alive is worse than being dead. Sometimes he wants to compose and practise all night, at other times he can't get out of bed. His flatmate Harry tries to understand but is increasingly confused by Flynn's erratic mood swings. His friend Jennah tries to help, but Flynn finds it difficult to be around her as he struggles to control his feelings and behaviour. With the pressure of the forthcoming concert and the growing concern of his family and friends, emotions come to a head. Sometimes things can only get worse before they get better.
- The Semantic Web Karl Aberer,2007-10-22 This book constitutes the refereed proceedings of the joint 6th International Semantic Web

Conference, ISWC 2007, and the 2nd Asian Semantic Web Conference, ASWC 2007, held in Busan, Korea, in November 2007. The 50 revised full academic papers and 12 revised application papers presented together with 5 Semantic Web Challenge papers and 12 selected doctoral consortium articles were carefully reviewed and selected from a total of 257 submitted papers to the academic track and 29 to the applications track. The papers address all current issues in the field of the semantic Web, ranging from theoretical and foundational aspects to various applied topics such as management of semantic Web data, ontologies, semantic Web architecture, social semantic Web, as well as applications of the semantic Web. Short descriptions of the top five winning applications submitted to the Semantic Web Challenge competition conclude the volume.

 MMIXware Donald E. Knuth,2003-06-26 MMIX is a RISC computer designed by Don Knuth to illustrate machine-level aspects of programming. In the author's book series The Art of Computer Programming, MMIX replaces the 1960s-style machine MIX. A particular goal in the design of MMIX was to keep its machine language simple, elegant, and easy to learn. At the same time, all of the complexities needed to achieve high performance in practice are taken into account. This book constitutes a collection of programs written in CWEB that make MMIX a virtual reality. Among other utilities, an assembler converting MMIX symbolic files to MMIX objects and two simulators executing the programs in given object files are provided. The latest version of all programs can be downloaded from MMIX's home page. The book provides a complete documentation of the MMIX computer and its assembly language. It also presents mini-indexes, which make the programs much easier to understand. A corrected reprint of the book has been published in August 2014, replacing the version of 1999.

 Soft Real-Time Systems: Predictability vs. Efficiency Giorgio C Buttazzo,Giuseppe Lipari,Luca Abeni,Marco Caccamo,2006-07-02 Hard real-time systems are very predictable, but not sufficiently flexible to adapt to dynamic situations. They are built under pessimistic assumptions to cope with worst-case scenarios, so they often waste resources. Soft real-time systems are built to reduce resource consumption, tolerate overloads and adapt to system changes. They are also more suited to novel applications of real-time technology, such as multimedia systems, monitoring apparatuses, telecommunication networks, mobile robotics, virtual reality, and interactive computer games. This unique monograph provides concrete methods for building

flexible, predictable soft real-time systems, in order to optimize resources and reduce costs. It is an invaluable reference for developers, as well as researchers and students in Computer Science.

- **The Art of How to Train Your Dragon** Tracey Miller-Zarneke,2010 Featuring more than 350 pieces of development artwork that includes early character designs, story sketches and concept paintings never before released by the studio, The Art of How to Train Your Dragon offers a stunning view of a film about an unlikely alliance between a yoiung Viking and a deadly dragon. The film has been inspired by the original book by Cressida Cowell.
- **Self-Similar Network Traffic and Performance Evaluation** Kihong Park,Walter Willinger,2000-09-04 A collection of work from top researchers in the field, this book covers all aspects of self-similar network traffic. Readers will gain a better understanding of these networks through a broad introduction to the topic, as well as suggestions for future research.
- **Designing Programmes** Karl Gerstner,2007 Karl Gerstner s work is a milestone in the history of design. One of his most important works is Designing Programmes, which is presented here in a new edition of the original 1964 publication. In four essays, the author provides a basic introduction to his design methodology. Instead of set recipes, the method suggests a model for design in the early days of the computer era. The intellectual models it proposes, however, continue to be useful today. What it does not purvey is cut-and-dried, true-or-false solutions or absolutes of any kind - instead, it develops fundamental principles in an innovative and future-oriented way. The book is especially topical and exciting in the context of current developments in computational design, which seem to hold out the possibility of programmed design. With many examples from the worlds of graphic and product design, music, architecture, and art, it inspires the reader to seize on the material, develop it further, and integrate it into his or her own work. 200 illustrations
