Mathematics in schools offering the Integrated Programme is usually taught as an integrated subject, so that students will be able to better relate learnt knowledge to new knowledge and transfer conceptual understanding to application, as many mathematical concepts are interconnected. One driving force to write the series is to provide a guidebook especially for students in the Integrated Programme. The other is to share teaching ideas with other Mathematics teachers who love the subject as much as I do. Features: ♦ Each topic begins with a recap of key mathematical concepts to help students consolidate learning. ♦ Worked examples are included to enhance understanding and application of key concepts, with side notes explaining some of the working. ♦ Practice questions are tiered into three levels of difficulty. Level 1 aims to provide students with the necessary practice; Level 2 to further build the confidence and test students' understanding; Level 3 to challenge students with higher order thinking questions. ♦ ♦ Math Wonderland ♦ is one highlight of the book. Activities include extension of the topic, suggested alternative assessment and questions to stretch mathematical thinking. The primary purpose of the Wonderland is to allow students to think deeply about what they have learnt and to appreciate the learning of Mathematics beyond classroom. ♦ Step-by-step solutions to all questions are provided as an additional resource to students' problem solving process. I hope this book will benefit students studying Integrated Mathematics, as well as those with aptitude for the subject who are preparing for the GCE O Level Mathematics and Additional Mathematics examinations.

Cracking the High School Math Competitions Kevin Wang, Kelly Ren, John Lensmire, 2016-01-20 This book contains the curriculum materials of the Math Challenge courses at Areteem Institute. The math competitions for middle and high school students generally do not involve college mathematics such as calculus and linear algebra. There are four main topics covered in the competitions: Number Theory, Algebra, Geometry, and Combinatorics. The problems in the math competitions are usually challenging problems for which conventional methods are not sufficient, and students are required to use more creative ways to combine the methods they have learned to solve these problems. This book covers these topics, along with fundamental concepts required and problem solving strategies useful for solving problems in the math competitions such as AMC 10 & 12, ARML, and ZIML Division JV. For information about Areteem Institute, visit <http://www.aretteam.org>.

Ultimate Math Contest Preparation, Problem Solving Strategies, Math IQ Puzzles Frank Ho, Amanda Ho, 2016-12-13 This is an answers book for the student workbook *Ultimate Math Contest Preparation, Problem Solving Strategies, Math IQ Puzzles* for Grades 2 and 3. It has been almost 20 years since I published the first math contest workbook in 2002. This workbook is 3-in-1, one-of-a-kind and world's first, I believe. In the past 20 years, I created many workbooks and the reason simply is because I could not find suitable teaching materials to use at my own after-school learning centre. Why I created another workbook this time? It is simply because there is a need for it. Let me explain. I created the following workbooks in the past: 1. Basics 2. Math IQ puzzles 3. Math and Chess Integrated workbooks using my invention of Geometry Chess Symbols 4. Math IQ Fitness 5. Integrated math, chess, and puzzles for the Creative minds 6. Math Contest. The trouble is, with every class, we have diversified students with different levels of math ability. Some of them could participate in discussion. Some of them were always quiet. They basically do not get full benefits by the discussion style of teaching. So, I discovered the method of student collaboration and the teach coaching method only makes sense when students are at the same level of play field, otherwise, the star will always be a star and others tend to fade away with no ideas to discuss at all. How to handle this condition of teaching? I need a good arsenal of workbooks. For those who can do math contest quality problems, I give them Math Contest books; for those who need to boost their brain thinking skills, I give them Math IQ Fitness; for those who do not like play competitive chess, I give them chess and math puzzles; for those who are falling behind, I give them Basics workbooks. The result is many students end up with 4 to 6 workbooks on their desks. The assignment marking also is a night mare. With 2-hours math teaching, I need a variety of teaching materials, much like the entertainment variety show. It would be boring if the singer continuously sing for 2-hours. The same reason for teaching math to elementary students, they need varieties of teaching contents, so I

decided to combine some of my workbooks into one that is why this combined workbook is so huge, larger than most of the math workbooks you would find on the market. This workbook is designed to teach in a very small class size preferably 4 or 5 students so that students could get lots of opportunities to discuss with the teacher. One-on-one teaching would be ideal because the student get 100% attention constantly. This workbook can be used in enrichment class because it includes many contest quality problems and thus could also be used for preparing math contests. It includes many mathematical puzzles so it could be used as a fun math teaching workbook. It also includes many mixed computations and advanced word problems, so it could be used for chess clubs while teaching chess lessons. The use of this workbook is multifaceted. <https://www.scribd.com/document/334185794/Sample-of-20-Pages-of-Ultimate-Math-Contest-Grade-2>
