Around the World in 60 Seconds Nuseir

Yassin, Bruce Kluger, 2019-11-05 Based on the Nas Daily video series with over 13 million dedicated followers comes the surprising, moving 1,000-day journey of a lifetime in book form In 2016, Nuseir Yassin quit his job to travel for 1,000 consecutive days. But instead of the usual tourist traps, Nas set out to meet real people, see the places they call home, and discover what unites all of us living on this beautiful planet—from villages in Africa and slums in India, to the high-rises of Singapore and the deserts of Australia. While he journeyed from country to country, Nas uploaded a single 60-second video per day for his Nas Daily Facebook following to highlight the amazing, terrifying, inspiring and downright surprising sh*t happening all over the world. Thirteen million followers later, Nas Daily has become the most immersive travel experience ever captured, and finally shows us what we've all been looking for: each other. AROUND THE WORLD IN 60 SECONDS is Nas' unpredictable 1,000-day world tour in book form. At times a striking portrait of the most uncharted places in the world, at others a touching exploration of the human heart, this collection of life-affirming stories and breathtaking photographs changes how we think

about humanity and community and invites us all on a journey to see the world, and each other, anew.

The Hunt for Planet X Govert

Schilling, 2010-01-24 Ever since the serendipitous discovery of planet Uranus in 1781, astronomers have been hunting for new worlds in the outer regions of our solar system. This exciting and ongoing quest culminated recently in the discovery of hundreds of ice dwarfs in the Kuiper belt, robbed Pluto from its 'planet' status, and led to a better understanding of the origin of the solar system. This timely book reads like a scientific 'who done it', going from the heights of discovery to the depths of disappointment in the hunt for 'Planet X'. Based on many personal interviews with astronomers, the well-known science writer Govert Schilling introduces the heroes in the race to be the first in finding another world, bigger than Pluto.

Lexical Priming Michael Pace-Sigge, Katie J. Patterson, 2017-08-15 Published in 2005, Michael Hoey's *Lexical Priming* – A new theory of words and language introduced a completely new theory of language based on how words are used in the real world. In the ten years that have passed, the theory has since gained traction in the field of corpus-linguistics. This volume brings together some of the most important contributions to the theory, in areas such as language teaching and learning, discourse analysis, stylistics as well as the design of language learning software. Crucially, this book introduces aspects of the language that have so far been given less focus in lexical priming, such as spoken language, figurative language, forced primings, priming as predictor of genre, and historical primings. The volume also focuses on applying the lexical priming theory to languages other than English including Mandarin Chinese and Finnish.

Apocalypse Cinema Stephen Prince, 2021-07-16
Vivid images of the apocalypse proliferate throughout contemporary cinema, which pictures the death of civilization in wildly different ways. Some films imagine a future where humanity is wiped out entirely, while others envision humans as an endangered species, enslaved by alien invaders or hunted by zombie hordes. This book provides a lively overview of apocalypse cinema, including alien invasions, nuclear annihilation, asteroid collisions, climate change, and terrifying plagues. Covering pivotal films from the silent era to the present day, including Metropolis, Invasion of the Body Snatchers, Dr. Strangelove, Contagion, and Avengers: Endgame, Stephen Prince explores how these dark visions are rooted in religious and prophetic traditions, and he considers how our love for apocalypse cinema is tied to fundamental existential questions and

anxieties that never go out of fashion.

Riding With The Rocketmen James Witts, 2023-06-08

'Humble and very funny' - Ned Boulting 'Essential reading for any Étape rider' - Daniel Friebe, co-host of The Cyclist Podcast An Everyman dropped into the world of Supermen... Can this amateur cyclist complete L'Étape du Tour? Tadej Pogacar has 7% body fat, Chris Froome's resting heart rate is 30bpm, Mark Cavendish reaches sprint speeds of over 50mph. They're super-human cyclists who ride 3,500km over 21 stages across the Alps and Pyrenees as a matter of course. James Witts is 45 years old, fatty deposits have begun to nestle on his back and he has a penchant for craft ale. He also rides a little. But not a lot. In his job as cycling journalist, however, he does have unparalleled access to the world's best riders and their expert support staff. Which got him thinking: could spending time with the pros, discovering the training, gear and nutritional tricks of the trade, transform this back-of-the-pack sportive straggler into a fit-and-fast frontrunner? In this entertaining and warm-hearted tale, Witts gains access to the world's greatest teams and riders to reveal the tricks of the

trade. Follow along as he trains, rides and eats using the regimes of the planet's toughest athletes, to conquer a stage of the Tour de France. Will he sacrifice the pub for stamina-boosting beetroot juice? Can an altitude mask really send his performance soaring? And will his ego cope with a drag-cutting, little-left-to-the-imagination skinsuit?

The Return of Planet-X Jaysen Q. Rand, 2007 The Return of Planet-X is an educational, informational source examining all aspects of this controversial subject including the record of X's Ancient Science of Prophecy, its Phantom Astronomy, Forbidden Archaeology and the Signs Of Its Approach. This book examines the history and prophecy of Earth's many cultures throughout the millennia and their voluminous references to the reality of X's periodic passages. The most current hypothesis used to examine X's next return through the solar system centers around the fact that X's extended orbit (approximately every 3,600 years -- first passing through the solar system then back out again), suggests that its 'destructive cycle' occurs in two phases. The 'first phase' begins with X's initial pass-through in 2009 separated by three years until its 'second phase.' This passage marks X's return leg back into deep space beginning again its 3,600-year-long trek through the heavens. X's last return visit through the solar system most likely coincided with the Hebrew's exodus from Egypt estimated around 1447 BC -- roughly 3,459 years ago. Did God somehow come to Moses' aid by staging a cosmic event that no one today understands? The Mayan Celestial

Calendar Codex inexplicably ends 21 December 2012. According to ancient Mayan cosmology, 'time' as we know it on Earth will reach its climax on that date. Written across the scroll of time and space, the author believes Planet-X will first return in 2009 and again in 2012.
