**Overcoming Fieldwork Challenges in Social Science and Higher Education Research** El Shaban, Abir,2020-12-18 Conducting social science and education research studies that require involvement in fieldwork is not an easy task. Many graduate students and novice researchers face difficulties efficiently and effectively conducting the practical aspects of their research in fieldwork. One reason for this difficulty may be due to the lack of finding and/or accessing authentic and realistic descriptions of previously conducted fieldwork experiences and processes in a variety of fields. This could be the case whether the research is going to be on a virtual platform or in a real and actual context. Thus, it is critical to shed light on the successes and pitfalls of the personal experiences of fieldwork. *Overcoming Fieldwork Challenges in Social Science and Higher Education Research* is an essential reference book that draws on the experience of conducting fieldwork in different contexts and world regions that are relevant to social science and education studies. The diverse experiences in research processes and contexts that this book offers provide readers with an authentic and realistic description of how research data is collected, the tools needed to envision some of the challenges that they might face, and how to effectively solve them. Highlighting topics such as methodology, data collection, and fieldwork partnerships in fields that include counseling, psychology, language studies, and teacher education, this book is ideal for social science and education studies professors who have research as a mandatory part of their

curriculum, administrators and policymakers, independent and novice researchers, and graduate students planning to conduct their research studies with humans in different contexts.

Jain, 2018-07-03 This book explores some of the emerging scientific and technological areas in which the need for data analytics arises and is likely to play a significant role in the years to come. At the dawn of the 4th Industrial Revolution, data analytics is emerging as a force that drives towards dramatic changes in our daily lives, the workplace and human relationships. Synergies between physical, digital, biological and energy sciences and technologies, brought together by non-traditional data collection and analysis, drive the digital economy at all levels and offer new, previously-unavailable opportunities. The need for data analytics arises in most modern scientific disciplines, including engineering; natural-, computer- and information sciences; economics; business; commerce; environment; healthcare; and life sciences. Coming as the third volume under the general title MACHINE LEARNING PARADIGMS, the book includes an editorial note (Chapter 1) and an additional 12 chapters, and is divided into five parts: (1) Data Analytics in the Medical, Biological and Signal Sciences, (2) Data Analytics in Social Studies and Social Interactions, (3) Data Analytics in Traffic, Computer and Power Networks, (4) Data Analytics for Digital Forensics, and (5) Theoretical Advances and Tools for Data Analytics. This research book is intended for both experts/researchers in the field of data analytics, and readers working in the fields of artificial and computational intelligence as well as computer science in general who wish to learn more about the field of data analytics and its applications. **Morphometrics with R** Julien Claude, 2008-12-15 This book aims to explain how to use R to perform morphometrics. Morphometric analysis is the study of shape and size variations and covariations and their covariations with other variables. Morphometrics is thus deeply rooted within statistical sciences. While most applications concern biology, morphometrics is becoming common tools used in archeological, palaeontological, geographical, or medicine disciplines. Since the recent formalizations of some of the ideas of predecessors, such as D'arcy Thompson, and thanks to the development of computer technologies and new ways for appraising shape changes and variation, morphometrics have undergone, and are still undergoing, a revolution. Most techniques dealing with statistical shape analysis have been developed in the last three decades, and the number of publications using morphometrics is increasing rapidly. However, the majority of these methods cannot be implemented in available software and therefore prospective students often need to acquire detailed knowledge in informatics and statistics before applying them to their data. With acceleration in the accumulation of methods accompanying the emerging science of statistical shape analysis, it is becoming important to use tools that allow some autonomy. R easily helps fulfil this need. R is a language and environment for statistical computing and graphics. Although there is an increasing number of computer applications that perform morphometrics, using R has several advantages that confer to users considerable power and possible new horizons in a world that requires rapid adaptability.

**Cyber-Physical Systems: Advances in Design & Modelling** Alla G. Kravets, Alexander A. Bolshakov, Maxim V. Shcherbakov, 2019-11-25 This book presents new findings on cyber-physical systems design and modelling approaches based on AI and data-driven techniques, identifying the key industrial challenges and the main features of design and modelling processes. To enhance the efficiency of the design process, it proposes new approaches based on the concept of digital twins. Further, it substantiates the scientific, practical, and methodological approaches to modelling and simulating of cyber-physical systems. Exploring digital twins of cyber-physical systems as well as of production systems, it proposes combining both

mathematical models and data processing techniques as advanced methods for cyber-physical system design and modelling. Moreover, it presents the implementation of the developed prototypes, including testing in real industries, which have collected and analyzed big data and proved their effectiveness. The book is intended for practitioners, enterprise representatives, scientists, and Ph.D. and master's students interested in the research and applications of cyber-physical systems in different domains.
