Development, Social Change and Environmental Sustainability Sumarmi,Nanda Harda Pratama Meiji,Joan Hesti Gita Purwasih,Abdul Kodir,Edo Han Siu Andriesse,Dorina Camelia Ilies,Ken Miichi,2021-06-17 Nowadays, the concept of SDGs (Sustainable Development Goals) is starting to replace the concept of MDGs (Millennium Developmental Goals). It is a global goal adopted by all United Nations member states. It emphasizes the idea that the development of every country can only be achieved by balancing other factors such as social, economic, and environmental sustainability. It is already clear how sustainable development works with environmental ethics and management. However, there are still issues regarding the sustainable development and human well-being. Sustainable development should focus on finding a way for society to meet their present needs for the long term without sacrificing the ability of future generations to meet their needs. This international seminar provides research results and literature regarding the topic of sustainable development concept, the dynamics of sustainable development and social change, and environmental sustainability. The international seminar, entitled 1st International Conference on Contemporary Sociology and Educational Transformation, listed speakers from several countries providing an overview on human and environmental resilience. This book contains a selection of papers presented at the conference.

Java Program Design Edward Sciore,2018-12-08 Get a grounding in polymorphism and other fundamental aspects of object-oriented program design and implementation, and learn a subset of design patterns that any practicing Java professional simply must know in today's job climate. Java Program Design presents program design principles to help practicing programmers up their game and remain relevant in the face of changing trends and an evolving language. The book enhances the traditional design patterns with Java's new functional programming features, such as functional interfaces and lambda expressions. The result is a fresh treatment of design patterns that expands their power and applicability, and reflects current best practice. The book examines some well-designed classes from the Java class library, using them to illustrate the various object-oriented principles and patterns under discussion. Not only does this approach provide good, practical examples, but you will learn useful library classes you might not otherwise know about. The design of a simplified banking program is introduced in chapter 1 in a non-object-oriented incarnation and the example is carried through all chapters. You can see the object orientation develop as various design principles are progressively applied throughout the book to produce a refined, fully object-oriented version of the program in the final chapter. What You'll Learn Create well-designed programs, and identify and improve poorly-designed ones Build a professional-level understanding of polymorphism and its use in Java interfaces and class hierarchies Apply classic design patterns to Java programming problems while respecting the modern features of the Java language Take advantage of classes from the Java library to facilitate the implementation of design patterns in your programs Who This Book Is For Java programmers who are comfortable writing non-object-oriented code and want a guided immersion into the world of object-oriented Java, and intermediate programmers interested in strengthening their

foundational knowledge and taking their object-oriented skills to the next level. Even advanced programmers will discover interesting examples and insights in each chapter.

Another City, Not My Own Dominick Dunne, 2012-02-08 This is the story of the Trial of the Century as only Dominick Dunne can write it. Told from the point of view of one of Dunne's most familiar fictional characters-Gus Bailey-Another City, Not My Own tells how Gus, the movers and shakers of Los Angeles, and the city itself are drawn into the vortex of the O.J. Simpson trial. We have met Gus Bailey in previous novels by Dominick Dunne. He is a writer and journalist, father of a murdered child, and chronicler of justice-served or denied-as it relates to the rich and famous. Now back in Los Angeles, a city that once adored him and later shunned him, Gus is caught up in what soon becomes a national obsession. Using real names and places, Dunne interweaves the story of the trial with the personal trials Gus endures as he faces his own mortality. By day, Gus is at the courthouse, the confidant of the Goldman and Simpson families, the lawyers, the journalists, the hangers-on, even the judge; at night he is the honored guest at the most dazzling gatherings in town as everyone-from Kirk Douglas to Heidi Fleiss, from Elizabeth Taylor to Nancy Reagan-delights in the latest news from the corridors of the courthouse. Another City, Not My Own does what no other book on this sensational case has been able to do because of Dominick Dunne's unique ability to probe the sensibilities of participants and observers. This book illuminates the meaning of guilt and innocence in America today. A vivid, revealing achievement, Another City, Not My Own is Dominick Dunne at his best.

Distributed Applications and Interoperable Systems II Lea Kutvonen, Hartmut König, Martti Tienari, 2013-03-09 Mastering interoperability in a computing environment consisting of different operating systems and hardware architectures is a key requirement which faces system engineers building distributed information systems. Distributed applications are a necessity in most central application sectors of the contemporary computerized society, for instance, in office automation, banking, manufacturing, telecommunication and transportation. This book focuses on the techniques available or under development, with the goal of easing the burden of constructing reliable and maintainable interoperable information systems. The topics covered in this book include: Management of distributed systems; Frameworks and construction tools; Open architectures and interoperability techniques; Experience with platforms like CORBA and RMI; Language interoperability (e.g. Java); Agents and mobility; Quality of service and fault tolerance; Workflow and object modelling issues; and Electronic commerce . The book contains the proceedings of the International Working Conference on Distributed Applications and Interoperable Systems II (DAIS'99), which was held June 28-July 1, 1999 in Helsinki, Finland. It was sponsored by the International Federation of Information Processing (IFIP). The conference program presents the state of the art in research concerning distributed and interoperable systems. This is a topical research area where much activity is currently in progress. Interesting new aspects and innovative contributions are still arising regularly. The DAIS series of conferences is one of the main international forums where these important findings are reported.

Dwelling in Political Landscapes Anu Lounela, Eeva Berglund, Timo Kallinen, 2019-05-22 People all over the globe are experiencing unprecedented and often hazardous situations as environments change at speeds never before experienced. This edited collection proposes that anthropological perspectives on landscape have great potential to address the resulting conundrums. The contributions build on broadly phenomenological, structuralist and multi-species approaches to environmental perception and experience, but they also argue for incorporating political power into analysis alongside dwelling, cosmology and everyday practice. The book's 13 ethnographically rich chapters explore how the material and the conceptual are entangled in and as landscapes, but it also looks at how these processes unfold at many scales in time and space, involving different actors with different powers. Thus it reaches towards new methodologies and new ways of using anthropology to engage with the sense of crisis concerning environment, movements of people, climate change and other planetary transformations. Dwelling in political landscapes: contemporary anthropological perspectives builds substantially upon anthropological work by Tim Ingold, Anna Tsing and Philippe Descola and on related work beyond, which emphasises the ongoing and open-ended, yet historically conditioned ways in which humans and nonhumans produce the environments they inhabit. In such work, landscapes are understood as the medium and outcome of meaningful life activities, where humans, like other animals, dwell. This means that landscapes are neither social/cultural nor natural, but socio-natural. Protesting against and moving on from the proverbial dualisms of modern, Western and maybe capitalist thought, is only the first step in renewing anthropology's methodology for the current epoch, however. The contributions ask how seemingly disconnected temporal, representational, economic and other systemic dynamics fold back on lived experience that are materialised in landscapes. Foremost through studying how socially valued landscapes become irreversibly disturbed, commodified or subjected to wilful markings or

erasures, the book explores a number of approaches to how landscapes are entangled in the ways people gather and organise themselves. Mindful of troubling changes in Earth Systems, all the authors argue from empirics. They show that processes of landscape change are always both habitual and laden with choices. That is, landscape change is political. Undoubtedly, landscape politics is bound up not just in how nature has been imagined, but in long histories of consumption. Today, an alarming quest for raw materials and energy continues to change both political and geological formations. Meanwhile dominant socio-political aspirations mean the exploitation of staggering volumes of cheap resources like fossil fuels in order to sustain economic processes that are as taken-for-granted as they are unsustainable. Like anthropology generally, this book attends to the contextual details buried in such planet-scale pictures. Building on traditional anthropological strengths, many authors consider the details of how the past is brought into the present – or erased from it – in material flows and sensory awareness, as well as in narratives that are explicitly linked to particular landscapes. Colonial identity formation and the different ways that it links with how landscape is viewed and managed (for instance for resource development for a global market), whether in Southern Africa, Israel/Palestine, the Canadian arctic or Indonesia, is a particularly striking example of how to talk about landscape is also to talk about past, present and future. And as the idea that we inhabit the Anthropocene becomes commonplace, the discipline can meaningfully discuss the current era as one of disavowed ruins as well as of poorly understood multispecies relations. To think of landscape as historically produced across multiple scales, does not mean ignoring its sensuous qualities let alone its role in cosmological systems. On the contrary, the analyses in the collection attend to the ways people's movements through the landscape produce it as a material and conceptual resource. Taken together, the book's ethnographic analyses take on board the unprecedented conditions under which people everywhere are having to make sense and forge relationships to the worlds they inhabit. Since landscapes are not what they used to be, neither can anthropology be.

A Chinese Bestiary Richard E. Strassberg, 2023-11-03 A Chinese Bestiary presents a fascinating pageant of mythical creatures from a unique and enduring cosmography written in ancient China. The *Guideways through Mountains and Seas*, compiled between the fourth and first centuries b.c.e., contains descriptions of hundreds of fantastic denizens of mountains, rivers, islands, and seas, along with minerals, flora, and medicine. The text also represents a wide range of beliefs held by the ancient Chinese. Richard Strassberg brings the *Guideways* to life for modern readers by weaving together translations from the work itself with information from other texts and recent archaeological finds to create a lavishly illustrated guide to the imaginative world of early China. Unlike the bestiaries of the late medieval period in Europe, the *Guideways* was not interpreted allegorically; the strange creatures described in it were regarded as actual entities found throughout the landscape. The work was originally used as a sacred geography, as a guidebook for travelers, and as a book of omens. Today, it is regarded as the richest repository of ancient Chinese mythology and shamanistic wisdom. The *Guideways* may have been illustrated from the start, but the earliest surviving illustrations are woodblock engravings from a rare 1597 edition. Seventy-six of those plates are reproduced here for the first time, and they provide a fine example of the Chinese engraver's art during the late Ming dynasty. This beautiful volume, compiled by a well-known specialist in the field, provides a fascinating window on the thoughts and beliefs of an ancient people, and will delight specialists and general readers alike.

The topics cover the physical growth and physiological and genetic alterations in plants, particularly under environmental stress conditions. The Story of the Selma Voting Rights Marches in Photographs David Aretha,2014-01-01 The Civil Rights Act of 1964 was a momentous victory for civil rights activists, but one major obstacle remained in the path toward equal rights for African Americans: the right to vote. In the South, segregationists prevented African Americans from voting. Civil rights leaders believed it was time for strong action and chose Selma, Alabama, as the rallying point. There, the marches and protests captured the nation's attention. Through gripping primary source photographs, author David Aretha explores this important time in American history.
