Kakuro Guardian News and Media Ltd,2005-11-14 When the Guardian relaunched their new Berliner sized paper this autumn, they chose Kakuro as one of their launch vehicles. Kakuro (called Kakro in Japan and Cross Sums in the USA) has become the new number puzzle phenomenon gathering millions of fans worldwide. Older than puzzle favourite Sudoku and played for many years in Japan, Kakuro is best described as a kind of mathematical crossword. Like Sudoku, Kakuro is played on grids of varying sizes. Each grid consists of blank and filled squares similar to a crossword puzzle and the object of Kakuro is to fill in each of the white squares with the numbers 1-9 so that each set of blanks

adds up to the total to the left or above. The same number cannot be used more than once in each set. Some filled in squares have a diagonal slash across them with two numbers - one above and one below the diagonal. These are the 'clues' - the number in the top right corner relates to a horizontal 'clue' and the one in the bottom left corner relates to a vertical one. The Guardian Book of Kakuro features over 100 different number puzzles, graduating from 40 simple number games to 20 puzzles of medium difficulty and then finally featuring some really tough puzzle games for those who have mastered the skill. Each puzzle has been hand crafted by a Japanese inventor and is wholly original. The Guardian Book of Kakuro includes four pages of 'How To', explaining the rules and featuring example puzzles, plus a page of unique number combinations.

A number above the diagonal line in a black square represents the total of the numbers in the white squares to the right of it; similarly, a number below the diagonal line is the total sum of the digits in the white squares below it. The white squares can contain any of the digits 1 to 9, however, these digits cannot be repeated more than once in any vertical column or horizontal line to make the target number. For example, if the total number in the black square is 4 and there are 2 white squares, the digits must be 1 and 3, they cannot be 2 and 2. Located at the back of this book is a handy reference guide listing

all the possible combinations for the numbers from 3 to 45, also listed are the target numbers with only one possible combination.
