Computational Intelligence Applications in Modeling and Control Ahmad Taher Azar,Sundarapandian Vaidyanathan,2014-12-26 The development of computational intelligence (CI) systems was inspired by observable and imitable aspects of intelligent activity of human being and nature. The essence of the systems based on computational intelligence is to process and interpret data of various nature so that that CI is strictly connected with the increase of available data as well as capabilities of their processing, mutually supportive factors. Developed theories of computational intelligence were quickly applied in many fields of engineering, data analysis, forecasting, biomedicine and others. They are used in images and sounds processing and identifying, signals processing, multidimensional data visualization, steering of objects, analysis of lexicographic data, requesting systems in banking, diagnostic systems, expert systems and many other practical implementations. This book consists of 16 contributed chapters by subject experts who are specialized in the various topics addressed in this book. The special chapters have been brought out in the broad areas of Control Systems, Power Electronics, Computer Science, Information Technology, modeling and engineering applications. Special importance was given to chapters offering practical solutions and novel methods for the recent research problems in the main areas of this book, viz. Control Systems, Modeling, Computer Science, IT and engineering applications. This book will serve as a reference book for graduate students and researchers with a basic knowledge of control theory, computer science and soft-computing techniques. Mems Packaging Lee Yung-cheng,Cheng Yu-ting,Ramadoss Ramesh,2018-01-03 MEMS sensors and actuators are enabling components for smartphones, AR/VR, and wearable electronics. MEMS packaging is recognized as one of the most critical activities to design and manufacture reliable MEMS. A unique challenge to MEMS packaging is how to protect moving MEMS devices during manufacturing and operation. With the introduction of wafer level capping and encapsulation processes, this barrier is removed successfully. In addition, MEMS devices should be integrated with their electronic chips with the smallest footprint possible. As a result, 3D packaging is applied to connect the devices vertically for the most effective integration. Such 3D packaging also paves the way for further heterogenous integration of MEMS devices, electronics, and other functional devices. This book consists of chapters written by leaders developing products in a MEMS industrial

setting and faculty members conducting research in an academic setting. After an introduction chapter, the practical issues are covered: through-silicon vias (TSVs), vertical interconnects, wafer level packaging, motion sensor-to-CMOS bonding, and use of printed circuit board technology to fabricate MEMS. These chapters are written by leaders developing MEMS products. Then, fundamental issues are discussed, topics including encapsulation of MEMS, heterogenous integration, microfluidics, solder bonding, localized sealing, microsprings, and reliability. Contents: Introduction to MEMS Packaging (Y C Lee, Ramesh Ramadoss and Nils Hoivik)Silex's TSV Technology: Overview of Processes and MEMS Applications (Tomas Bauer and Thorbjörn Ebefors)Vertical Interconnects for High-end MEMS (Maaike M Visser Taklo and Sigurd Moe)Using Wafer-Level Packaging to Improve Sensor Manufacturability and Cost (Paul Pickering, Collin Twanow and Dean Spicer)Nasiri Fabrication Process for Low-Cost Motion Sensors in the Consumer Market (Steven Nasiri, Ramesh Ramadoss and Sandra Winkler)PCB Based MEMS and Microfluidics (Ramesh Ramadoss, Antonio Luque and Carmen Aracil)Single Wafer Encapsulation of MEMS Resonators (Janna Rodriguez and Thomas Kenny)Heterogeneous Integration and Wafer-Level Packaging of MEMS (Masayoshi Esashi and Shuji Tanaka)Packaging of Membrane-Based Polymer Microfluidic Systems (Yu-Chuan Su)Wafer-Level Solder Bonding by Using Localized Induction Heating (Hsueh-An Yang, Chiung-Wen Lin and Weileun Fang)Localized Sealing Schemes for MEMS Packaging (Y T Cheng, Y C Su and Liwei Lin)Microsprings for High-Density Flip-Chip Packaging (Eugene M Chow and Christopher L Chua)MEMS Reliability (Chien-Ming Huang, Arvind Sai SarathiVasan, Yunhan Huang, Ravi Doraiswami, Michael Osterman and Michael Pecht) Readership: Researchers and graduate students participating in research, R&D, and manufacturing of MEMS products; professionals associated with the integration for systems represented by smartphones, AR/VR, and wearable electronics. Keywords: MEMS;Packaging;Microelectromechanical Systems;Reliability;Microstructures;Sensors;ActuatorsReview: Key Features: The book covers engineering topics critical to product development as well as research topics critical to integration for future MEMS-enabled systemsIt is a major resource for those participating in MEMS and for every professional associated with the integration for systems represented by smartphones, AR/VR and wearable electronics

Women Empowerment: Challenges and Strategies ,2019-11-30 The proposed edited book on Women Empowerment: Challenges and Strategies, deals with the problems associated with the women community suffering from marginalization and the ways to address their identity and human rights concerns. The status of women in every nation was deprived and never considered. They were considered as mere machines to fulfill mere different duties. During ancient ages, we can see the evolution of changing and taking new perspectives. The concept of female in Manusmriti and in Puranas of considering them as dependents and deities is contradictory. There are still places where women are still considered as deprived and are still under chains it is the duty of the privileged to empower the underprivileged.Women empowerment programs failed as they overlooked the structural factors that perpetuated oppression and exploitation. The fulfillment of practical needs such as food, health care, and education cannot empower women unless the long-term strategic needs are met. The process of empowerment requires a transformation of structures of sub ordinance, control over material and intellectual resources, gaining decisions, making authority and reduction of gender inequality.The present book is the collection of Twenty-two research papers enlightens and thought-provoking articles contributed by research scholars throwing light on the women empowerment and role of religion and policies, women and nutrition, gender sensitization, role of education, status of working women in unorganized sector, role of media and NGO in

promoting women empowerment, empowerment of Indian women –a challenge of 21st century, life skills and older women with reference to old age homes, depiction of women in literature and Marginalization of Women Characters in literature, social organization and woman empowerment and entrepreneurshipThe book will be an important reference source for scholars in the fields of rights of the marginalized sections, rights of the women, the role of education & practice and gender studies. The purpose of this edited book is to provide a common platform for academicians and policymakers for a comprehensive deliberation on issues relating to social sector development in our society. The research papers and various articles covering so many themes of social awareness for education and social sector development are compiled in one place so that anyone can get easy access to their research.This book is edited basically for the students, teachers, researchers, and academics.
