Programming with Motif™ Keith D. Gregory,1992-10-08 The book attempts to provide a programmer with an easy introduction to the OSF/Motif graphical user interface (GUI). It is organized as a series of tutorials, each of which builds upon the previous. It starts at the level of What is a Widget?, and builds to the level of User-defined resource types. Along the way, most of the major elements of Motif are presented, with sample programs that illustrate their use. The target reader is an experienced C programmer and user of the X Window System, under the UNIX operating system. The reader should be familiar with the tools provided by UNIX for the compilation and testing programs; while this book does examine the process by which a Motif program is compiled, it does not explain that process. It also assumes that the reader is familiar with X terms such as pointer and display. The author has written his book so that the reader can use either Motif version 1.0 or 1.1.

A Fiery Peace in a Cold War Neil Sheehan,2010-10-05 The US-Soviet arms race, told through the story of a colorful and visionary American Air Force officer—melding biography, history, world affairs, and science to transport the reader back and forth from individual drama to world stage. Compulsively readable and important.” —The New York Times Book Review In this never-before-told story, Neil Sheehan—winner of the Pulitzer Prize and the National Book Award -- details American Air Force officer Bernard Schriever's quest to prevent the Soviet Union from acquiring nuclear superiority, and describes American efforts to develop the unstoppable nuclear-weapon delivery system, the intercontinental ballistic missile, the first weapons meant to deter an atomic holocaust rather than to be fired in anger. In a sweeping narrative, Sheehan brings to life a huge cast of some of the most intriguing characters of the cold war, including the brilliant physicist John Von Neumann, and the hawkish Air Force general, Curtis LeMay.

The Price of Sovaldi and Its Impact on the U.S. Health Care System ,2015

NASA 50th Anniversary Proceedings: NASA's First 50 Years: Historical Perspectives Steven J. Dick,National Aeronautics and Space Administration,2010-07-07 On 29 July 1958, President Dwight D. Eisenhower signed the National Aeronautics and Space Act, creating the National Aeronautics and Space Administration (NASA), which became operational on 1 October of that year. Over the next 50 years, NASA achieved a set of spectacular feats, ranging from advancing the well-established field of aeronautics to pioneering the new fields of Earth and space science and human

spaceflight. In the midst of the geopolitical context of the Cold War, 12 Americans walked on the Moon, arriving in peace “for all mankind.” Humans saw their home planet from a new perspective, with unforgettable Apollo images of Earthrise and the “Blue Marble,” as well as the “pale blue dot” from the edge of the solar system. A flotilla of spacecraft has studied Earth, while other spacecraft have probed the depths of the solar system and the universe beyond. In the 1980s, the evolution of aeronautics gave us the first winged human spacecraft, the Space Shuttle, and the International Space Station stands as a symbol of human cooperation in space as well as a possible way station to the stars. With the Apollo fire and two Space Shuttle accidents, NASA has also seen the depths of tragedy. In this volume, a wide array of scholars turn a critical eye toward NASA’s first 50 years, probing an institution widely seen as the premier agency for exploration in the world, carrying on a long tradition of exploration by the United States and the human species in general. Fifty years after its founding, NASA finds itself at a crossroads that historical perspectives can only help to illuminate.
