Children's Strategies David F. Bjorklund, 2013-05-13 One of the issues central to both classic and contemporary theories of cognitive development is children's goal-directed behavior, which is typically investigated in terms of strategies. This book brings together in one volume the latest research and theory regarding the development of children's strategies for a variety of cognitive tasks. Opening with a history of strategy development research and concluding with a chapter that

integrates the diversity of ideas expressed by the contributors, *Children's Strategies* offers intervening chapters that examine strategy development for attention, analogical reasoning, mathematics, memory, reading, and problem solving in infancy. Although there is much common ground shared by the various contributors to this volume, there is no consensus concerning what exactly a strategy is. This mixture of consensus and disagreement reflects both the explosion of research in this area since the late 1960's and the complexity of the issues involved. It also reflects the fact that this is a topic that is very much alive in cognitive circles, one that will continue to stimulate research for years to come. The papers in this volume describe current research and theory concerning the development of children's strategies for handling a variety of cognitive tasks. After providing a historical view of the concept of strategies in cognitive development, the book highlights many of the issues of concern to contemporary developmental psychologists interested in strategies. The issues discussed include problem solving in infancy, memory, selective attention, mathematics, analogical reasoning, and reading.

Making Sense (Routledge Revivals) Jerome S. Bruner,Helen Haste,2010-10-04 The growing child comes to understand the world, makes sense of experience and becomes a competent social individual. First published in 1987, *Making Sense* reflected the way in which developmental psychologists had begun to look at these processes in increasingly naturalistic, social situations. Rather than seeing the child as working in isolation, the authors of this collection take the view that 'making sense' involves social interaction and problem-solving. They particularly emphasize the role of language; its study both reveals the child's grasp of the frames of meaning in a particular culture,

and demonstrates the subtleties of concept development and role-taking.
