The Vanished Bride Bella Ellis,2020-07-07 Before they became legendary writers, Charlotte Brontë, Emily Brontë, and Anne Brontë were detectors in this charming historical mystery... Yorkshire, 1845. A young wife and mother has gone missing from her home, leaving behind two small children and a large pool of blood. Just a few miles away, a humble parson's daughters—the Brontë sisters—learn of the crime. Charlotte, Emily, and Anne Brontë are horrified and intrigued by the mysterious disappearance. These three creative, energetic, and resourceful women quickly realize that they have all the skills required to make for excellent “lady detectors.” Not yet published novelists, they have well-honed imaginations and are expert readers. And, as Charlotte remarks, “detecting is reading between the lines—it’s seeing what is not there.” As they investigate, Charlotte, Emily, and Anne are confronted

with a society that believes a woman's place is in the home, not scouring the countryside looking for clues. But nothing will stop the sisters from discovering what happened to the vanished bride, even as they find their own lives are in great peril...

Kit's Woman Havelock Ellis,2008-07 This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1902 Excerpt: ...earth. r' = radius of moon, or other body. P = moon's horizontal parallax = earth's angular semidiameter as seen from the moon. f = moon's angular semidiameter. Now $= P$ (in circular measure), $r' - r = r$ (in circular measure); $\therefore r : r' :: P : P'$, or (radius of earth): (radius of moon):: (moon's parallax): (moon's semidiameter). Examples. 1. Taking the moon's horizontal parallax as $57'$, and its angular diameter as $32'$, find its radius in miles, assuming the earth's radius to be 4000 miles. Here moon's semidiameter = $16'$; $\therefore 4000 :: 57' : 16'$; $\therefore r = 400 \frac{16}{57} = 1123$ miles. 2. The sun's horizontal parallax being 88, and his angular diameter $32'$ find his diameter in miles. ' Am. 872,727 miles. 3. The synodic period of Venus being 584 days, find the angle gained in each minute of time on the earth round the sun as centre. Am. $1-54$ per minute. 4. Find the angular velocity with which Venus crosses the sun's disc, assuming the distances of Venus and the earth from the sun are as 7 to 10, as given by Bode's Law. Since (fig. 50) $S V : VA :: 7 : 3$. But Sr has a relative angular velocity round the sun of $1-54$ per

minute (see Example 3); therefore, the relative angular velocity of A V round A is greater than this in the ratio of 7: 3, which gives an approximate result of 3-6 per minute, the true rate being about 4 per minute. Annual ParaUax. 95. We have already seen that no displacement of the observer due to a change of position on the earth's surface could apparently affect the direction of a fixed star. However, as the earth in its annual motion describes an orbit of about 92 million miles radius round the sun, the different positions in space from which an observer views the fixed stars from time to time throughout the year must be separated ...

Showdown in the Show-Me State William T. Horner,2005 Annotation When the Missouri state legislature overrode Governor Bob Holden's veto in 2003 to make conceal-and-carry the law of the land, the Show-Me State became one of the last in the country to adopt this type of law. In fact, it took years of concerted effort on the part of pro-gun advocates to make this a reality. In Showdown in the Show-Me State, William Horner chronicles this complex and fascinating fight in clear, chronological order beginning with the first bill introduced into the Missouri General Assembly in 1992 and ending with the state supreme court's decision in 2004 that Missouri's constitution permitted the legislature to grant Missourians the right to carry concealed weapons. There is, it is often argued, no state more typically American than Missouri. The state is closely divided along partisan lines, as is the nation as a

whole, and in the previous century, Missouri voters have regularly chosen the winner in almost every presidential election. By offering an examination of guns and gun policy in Missouri, this book provides a glimpse into the hearts and minds of Missourians and, by extension, of mainstream America as well. Horner's in-depth case study details the give-and-take among legislators and examines the role that interest groups played in the evolution of this divisive issue. Horner's book--part policy analysis, part interest group study, and part history--will appeal to readers with an interest in the issue of gun control or in the political process, and it will provide a thorough resource for those who study policy making at the state level
