Borrowing Jan Tent, Paul A. Geraghty, 2004 In recent years, there has been a resurgence of interest in linguistic borrowing, especially with regard to its importance in the reconstruction of pre-history. However, the general literature on borrowing has been based on a somewhat restricted range of data, tending to concentrate on the languages of Europe or the Americas. The Pacific has not figured prominently in such discussions. Linguists and anthropologists have long considered the Pacific to be a kind of laboratory because the geographical discreteness of its cultures allows clearer inferences to be made than are usually possible in a continental situation. Borrowing in the Pacific is relatively easy to identify and stratify. Its study is, therefore, especially useful in the reconstruction of the linguistic, social and cultural history. The scope of this volume is not solely restricted to borrowing in Oceanic languages, but includes two papers on borrowing in Fiji Hindi and Fiji English. Authors have been encouraged to address general issues of borrowing from the perspective of data they have derived from their fieldwork, thus avoiding the risk of producing a series of largely similar contributions. The volume also includes a number of seminal and authoritative papers on Pacific borrowing that have been previously published.

It shares some features with other Southern Hemisphere varieties of English such as Australian English and South African English, but is also clearly distinct from these. For the past two decades extensive research has focused on the evolution and ongoing development of the variety. New Zealand English presents the results of this research in an accessible way.

New-Dialect Formation Peter Trudgill, 2006-01-05 This book presents a new and controversial theory about dialect contact and the formation of new colonial dialects. It examines the genesis of Latin American Spanish, Canadian French and North American English, but concentrates on Australian and South African English, with a particular emphasis on the development of the newest major variety of the language, New Zealand English. Peter Trudgill argues that the linguistic growth of these new varieties of English was essentially deterministic, in the sense that their phonologies are the predictable outcome of the mixture of dialects taken from the British Isles to the Southern Hemisphere in the 19th century. These varieties are similar to one another, not because of historical connections between them, but because they were formed out of similar mixtures according to the same principles. A key argument is that social factors such as social status, prestige and stigma played no role in the early years of colonial dialect development, and that the 'work' of colonial new-dialect formation was carried out by children over a period of two generations. The book also uses insights derived from the study of early forms of these colonial dialects to shed light back on the nature of 19th-century English in the British Isles.

Language in the British Isles David Britain, 2007-08-23 The British Isles are home to a vast range of different spoken and signed languages and dialects. Language continues to evolve rapidly, in its diversity, in the number and the backgrounds of its speakers, and in the repercussions it has had for political and educational affairs. This book provides a comprehensive survey of the dominant languages and dialects used in the British Isles. Topics covered include the history of English; the relationship between Standard and Non-Standard Englishes; the major non-standard varieties spoken on the islands; and the history of multilingualism; and the educational and planning implications of linguistic diversity in the British Isles. Among the many dialects and languages surveyed by the volume are British Black English, Celtic languages, Chinese, Indian, European migrant languages, British Sign Language, and Anglo-Romani. Clear and accessible in its approach, it will be welcomed by students in sociolinguistics, English language, and dialectology, as well as anyone interested more generally in language within British society.

Urban Contact Dialects and Language Change Paul Kerswill, Heike Wiese, 2022-03-30 This volume provides a systematic comparative treatment of urban contact dialects in the Global North and South, examining the emergence and development of these dialects in major cities in sub-Saharan Africa and North-Western Europe. The book's focus on contemporary urban settings sheds light on the new language practices and mixed ways of speaking resulting from large-scale migration and the intense contact that occurs between new and existing languages and dialects in these contexts. In comparing these new patterns of language variation and change between cities in both Africa and Europe, the volume affords us a unique opportunity to examine commonalities in linguistic phenomena as well as sociolinguistic differences in societally multilingual settings and settings dominated by a strong monolingual habitus. These comparisons are reinforced by a consistent chapter structure, with each chapter presenting the linguistic and social context of the region, information on available data (including corpora), sociolinguistic and structural findings, a discussion of the status of the urban contact dialect, and its stability over time. The discussion in the book is further enriched by short commentaries from researchers contributing different theoretical and geographical perspectives. Taken as a whole, the book offers new insights into migration-based linguistic diversity and patterns of language variation and change, making this ideal reading for students and scholars in general linguistics and language structure, sociolinguistics, creole studies, diachronic linguistics, language acquisition, anthropological linguistics, language education and discourse analysis.

Linguistic Perspectives on a Variable English Morpheme Laura Rupp, David Britain, 2019-06-11 This book investigates –s marking in English verbs, specifically its manifestations in main verbs, in the past tense of BE, and in existential constructions. It embraces the many ways in which –s marking varies across the English speaking world, and considers both how it arose in these places historically and the ways in which it has since developed. The authors propose a story which holistically accounts for these different manifestations of –s, drawing upon evidence from a wide range of subdisciplines in linguistics, including sociolinguistics, generative syntax, historical linguistics, dialectology, and discourse-pragmatics. This book will be of particular interest to students and scholars in these and related fields.

Areal Features of the Anglophone World Raymond Hickey, 2013-01-01 The intention of the present volume is to unite the research of a range of scholars who have been working on features of non-standard, vernacular English which show an areal distribution, i.e. which cluster geographically across the world. Features common to an area can be due to (i) shared dialect input, (ii) common but separate innovations after settlement, or (iii) area-internal diffusion from one variety to another and/or others. The relative weighting of these factors is an important topic in the book and is a key focus in the 17 chapters. The book is divided into two large blocks, the first one consisting of case studies (8 chapters) and the second with features complexes (9 chapters). The former look at major anglophone locations from an areal perspective while the latter examine linguistic categories and features with a view to determine whether these could be areally based or not.

English as a Contact Language Daniel Schreier, Marianne Hundt, 2013-01-17 Recent developments in contact linguistics suggest considerable overlap of branches such as historical linguistics, variationist sociolinguistics, pidgin/creole linguistics, language acquisition, etc. This book highlights the complexity of contact-induced language change throughout the history of English by bringing together cutting-edge research from these fields. Special focus is on recent debates surrounding substratal influence in earlier forms of English (particularly Celtic influence in Old English), on language shift processes (the formation of Irish and overseas varieties) but also on dialects in contact, the contact origins of Standard English, the notion of new epicentres in World English, the role of children and adults in language change as well as transfer and language learning. With contributions from leading experts, the book offers fresh and exciting perspectives for research and is at the same time an up-to-date overview of the state of the art in the respective fields.
