Algebraic K-theory: The Homotopy Approach Of Quillen And An Approach From Commutative Algebra Satya Mandal, 2023-06-22 In this book the author takes a pedagogic approach to Algebraic K-theory. He tried to find the shortest route possible, with complete details, to arrive at the homotopy approach of Quillen [Q] to Algebraic K-theory, with a simple goal to produce a self-contained and comprehensive pedagogic document in Algebraic K-theory, that is accessible to upper level graduate students. That is precisely what this book faithfully executes and achieves. The contents of this book can be divided into three parts — (1) The main body (Chapters 2-8), (2) Epilogue Chapters (Chapters 9, 10, 11) and (3) the Background and preliminaries (Chapters A, B, C, 1). The main body deals with Quillen's definition of K-theory and the K-theory of schemes. Chapters 2, 3, 5, 6, and 7 provide expositions of the paper of Quillen [Q], and chapter 4 is on agreement of Classical K-theory and Quillen K-theory. Chapter 8 is an exposition of the work of Swan [Sw1] on K-theory of quadrics. The Epilogue chapters can be viewed as a natural progression of Quillen's work and methods. These represent significant benchmarks and include Waldhausen K-theory, Negative K-theory, Hermitian K-theory, \square -theory spectra, Grothendieck-Witt theory spectra, Triangulated categories, Nori-Homotopy and its relationships with Chow-Witt obstructions for projective modules. In most cases, the proofs are improvisation of methods of Quillen [Q]. The background, preliminaries and tools needed in chapters 2-11, are developed in chapters A on Category Theory and Exact Categories, B on Homotopy, C on CW Complexes, and 1 on Simplicial Sets.

Chinese Philosophy: A Selective and Analytic Approach George Sun, 2010-10-19 “Joe was very much at home both in contemporary logical theory and in American philosophy.... The readers of the present volume ... will find the clarity of expression and the rich understanding of the background literature, history, and concepts of the tradition he addresses to be an important access to and perspective on Chinese philosophy.” ---- Elizabeth R. Eames, Professor (Emeritus), formerly Director of the Graduate Institute of Philosophy, SIUC “Professor Wu provided ... deft comparisons between Chinese and Amero-Eurocentric philosophies, ... [and] challenges us to revisit and rethink our unexamined assumptions about reality, knowledge, value and the very enterprise of philosophy itself. ... As a traditionally trained junzi, Professor Wu's impressive range of expertise ranged from the Confucian classics to philology, poetry and calligraphy, certainly qualifying him for the designation of a Sinological renaissance man. Few of today's scholars are able to draw on such rich resources in their exploration of Chinese philosophy, which undoubtedly contributed to Professor Wu's sage proposal for “Philosophy as the Art of Making Sense.” ---- Sandra A. Wawrytko, Associate Professor, San Diego State University, CA. “Indeed, the pocket edition de luxe of Chinese philosophy revisited in a new light, the best invitation to the field long over-due! Deceptively lucid, simple and clear; yet witty and provocative throughout. Every output from Joe Wu's pen is, in one word, EXQUISITE! Bear in mind the essence of Chinese mentality: depth, breadth, simplicity and, above all, delicacy. (Ku Hung-ming) The author is capable of “expressing with clearness [not only] what he thought with vigor” (Maugham) but, more significantly, what he felt with delicacy. The readers, though appreciative of such a feat of brevity and lucidity, may feel as we do, wishing that Joe have more to enlighten us with, but for his premature passing in 2006! ---- Suncrates, Editor-in-Chief, Comprehensive Harmony About the Author: Joseph S. Wu, Professor (Emeritus) of California State University at Sacramento, CA., USA, was awarded a Certificate of Merit for Distinguished Service in Comparative Philosophy and Culture, by the Board of Dictionary of International Biography of London (1971).

Matrix Riccati Equations in Control and Systems Theory Hisham Abou-Kandil, Gerhard Freiling, Vlad Ionescu, Gerhard Jank, 2003-07-24 The authors present the theory of symmetric (Hermitian) matrix Riccati equations and contribute to the development of the theory of non-symmetric Riccati equations as well as to certain classes of coupled and generalized Riccati equations occurring in differential games and stochastic control. The volume offers a complete treatment of generalized and coupled Riccati equations. It deals with differential, discrete-time, algebraic or periodic symmetric and non-symmetric equations, with special emphasis on those equations appearing in control and systems theory. Extensions to Riccati theory allow to tackle robust control problems in a unified approach. The book makes available classical and recent results to engineers and mathematicians alike. It is accessible to graduate students in mathematics, applied mathematics, control engineering, physics or economics. Researchers working in any of the fields where Riccati equations are used can find the main results with the proper mathematical background.

Next-Generation Plant Breeding Approaches for Stress Resilience in Cereal Crops Mallana Gowdra Mallikarjuna, S. Chandra Nayaka, Tanushri Kaul, 2022-09-15 This edited book highlights the gravity and efficacy of next-generation breeding tools for the enhancement of stress-resilience in cereals, especially in the context of climate change, pests, diseases, and abiotic stresses. The content of the book helps in understanding the application of emerging genetic concepts and neoteric genomic approaches in cereal breeding. It collates all the latest information about enhancing the stress resilience in cereal crops for overcoming food security issues. Cereals have predominantly been used as a staple food since time immemorial and contribute more than 50% of the caloric requirement of the global population. However, in cereals, the yield losses due to various stresses are very high, considering the crop growth stage and stress sensitivity. Therefore, to feed and nourish the generations in the era of climate change, it is imperative to develop stress-resilient cereal cultivars. This book explores newly developed next-generation breeding tools, viz., genome-wide association studies, genomic prediction, genome editing, and accelerated generation advancement methodologies, which revealed promising outcomes by enhancing the stress resilience in cereals with yield potential. This book is useful for postgraduate students specializing in plant breeding, plant stress physiology, plant genomics, agriculture, and agronomy. It is of immense value to scientific community involved in teaching, research, and extension activities related to cereal cultivation.

Jung on Synchronicity and Yijing Young Woon Ko, 2011-01-18 Jung's understanding of Yijing for supporting the synchronistic principle reveals the key issues of his archetypal theory. Jung's archetypal theory, which is the basic motif of his understanding of Yijing, illuminates the religious significance of Yijing. Jung defines the human experience of the divine as an archetypal process by way of which the unconscious conveys the human religious experience. In this way, the divine and the unconscious mind are inseparable from each other. For the human experience of the divine, Jung's archetypal theory developed in a theistic tradition is encountered with the religious character of the non-theistic tradition of Yijing. From Jung's partial adaptation of Yijing, however, we notice the differences between Jung's archetypal psychology and the Yijing cosmological view. This difference represents the difference between the Western and the East Asian tradition. This aspect is well shown in the fact that Jung's theoretical assumption for the definition of

archetype is deeply associated with Plato's Idea and the Kantian a priori category. Accordingly, Jung brings their timeless-spaceless realm of archetype into the synchronistic phenomenon of the psyche and identifies the Yijing text with the readable archetype. Yet, the synchronistic moment that Jung presents is the phenomenon always involved in subjective experience and intuition, which are developed in the duration of time. The synchronistic phenomenon is not transcendent or the objective flowing of time-in-itself regardless of our subjective experience.

Applications of Genome Engineering in Plants Santosh Kumar Upadhyay, 2023-12-18 Applications of Genome Engineering in Plants Understand the keys to creating the food of the future Genome engineering in plants is a field that has made enormous strides in recent years. In particular, the CRISPR-Cas system has been used in a number of crop species to make significant leaps forward in nutritional improvement, stress tolerance, crop yield, and more. As scientists work to meet global food needs and foster sustainable agriculture in a changing world, genome engineering promises only to become more important. Soft Computing Approach for Mathematical Modeling of Engineering Problems Ali Ahmadian, Soheil Salahshour, 2021-09-02 This book describes different mathematical modeling and soft computing techniques used to solve practical engineering problems. It gives an overview of the current state of soft computing techniques and describes the advantages and disadvantages of soft computing compared to traditional hard computing techniques. Through examples and case studies, the editors demonstrate and describe how problems with inherent uncertainty can be addressed and eventually solved through the aid of numerical models and methods. The chapters address several applications and examples in bioengineering science, drug delivery, solving inventory issues, Industry 4.0, augmented reality and weather forecasting. Other examples include solving fuzzy-shortest-path problems by introducing a new distance and ranking functions. Because, in practice, problems arise with uncertain data and most of them cannot be solved exactly and easily, the main objective is to develop models that deliver solutions with the aid of numerical methods. This is the reason behind investigating soft numerical computing in dynamic systems. Having this in mind, the authors and editors have considered error of approximation and have discussed several common types of errors and their propagations. Moreover, they have explained the numerical methods, along with convergence and consistence properties and characteristics, as the main objectives behind this book involve considering, discussing and proving related theorems within the setting of soft computing. This book examines dynamic models, and how time is fundamental to the structure of the model and data as well as the understanding of how a process unfolds • Discusses mathematical modeling with soft computing and the implementations of uncertain mathematical models • Examines how uncertain dynamic systems models include uncertain state, uncertain state space and uncertain state's transition functions • Assists readers to become familiar with many soft numerical methods to simulate the solution function's behavior This book is intended for system specialists who are interested in dynamic systems that operate at different time scales. The book can be used by engineering students, researchers and professionals in control and finite element fields as well as all engineering, applied mathematics, economics and computer science interested in dynamic and uncertain systems. Ali Ahmadian is a Senior Lecturer at the Institute of IR 4.0, The National University of Malaysia. Soheil Salahshour is an associate professor at Bahcesehir University.

Adpositions Dennis Kurzon, Silvia Adler, 2008-05-13 This book is a collection of articles which deal with adpositions in a variety of languages and from a number of perspectives. Not only does the book cover what is traditionally treated in studies from a European and Semitic orientation - prepositions, but it presents studies on postpositions, too. The main languages dealt with in the collection are English, French and Hebrew, but there are articles devoted to other languages including Korean, Turkic languages, Armenian, Russian and Ukrainian. Adpositions are treated by some authors from a semantic perspective, by others as syntactic units, and a third group of authors distinguishes adpositions from the point of view of their pragmatic function. This work is of interest to students and researchers in theoretical and applied linguistics, as well as to those who have a special interest in any of the languages treated.

Polymers at Interfaces Gerard Fleer, M.A. Cohen Stuart, J.M.H.M. Scheutjens, T. Cosgrove, B. Vincent, 1993-09-30 This book is concerned with the configuration of polymers at the interfacial zone between two other phases or immiscible components. In recent years, developments in technology combined with increased attention from specialists in a wide range of fields have resulted in a considerable increase in our understanding of the behavior of polymers at interfaces. Inevitably these advances have generated a wealth of literature and although there have been numerous reviews, a critical treatment with adequate descriptions of both theory and experiment, including detailed analysis of the two, has been missing. This text hopes to fill this gap, providing a timely and comprehensive account of the field as it stands today. This long needed work will be invaluable to experts as well as newcomers in the broad field of polymers, interfaces and colloids, both in industry and academia. Whilst industrial laboratories involved in this field will find it indispensable, it will be equally important to anyone with an interest in interfacial polymer or colloidal research.

A Psychoanalytic Approach to Smoking Cessation Fung Ko,2023-12-14 A Psychoanalytic Approach to Smoking Cessation: The Cigarette as a Transitional Object provides an accessible understanding to the unconscious motive behind smoking addiction using Winnicott’s concept of the transitional object. The book is divided thematically into six parts. Ko begins by outlining the conscious motives for smoking from a psychological perspective and looks at commercial research conducted by the tobacco industry, before using psychoanalytically informed cross-disciplinary literature to assess the unconscious motives for smoking. She expertly introduces Winnicott’s view on smoking addiction, using his concept of the transitional object, and highlights the power of the Free Association Narrative Interview method in accessing the unconscious and embedded emotional experiences. Using clinical examples, she illustrates the benefits of this method as a tool to elicit free associations from research respondents. She details the parallels between the individual respondents’ smoking experience, as well as their relationship with cigarettes and the seven qualities of transitional objects outlined by Winnicott in his 1953 landmark paper. Ko concludes by emphasising the significance and implications of this thesis to smokers and public health policy, as well as the smoking cessation approach and proposed directions for future research. This book is an essential resource for psychoanalysts and psychotherapists working in smoking cessation organisations, as well as those working in addiction services.
