Pipsqueaks, Slowpokes, and Stinkers Melissa Stewart, 2018-09-04 Underdogs, unite! Celebrated nonfiction author Melissa Stewart offers young readers a funny, informative look at some animal underdogs that have amazing means of survival. Pee-ew! Should the stinky, skunklike zorilla take a bath? And should the slowpoke Galá pagos tortoise get a move on? Everyone knows cool animals like elephants and cheetahs, but you should meet these lesser-known creatures that have amazing, creative means of survival! Written with a lively, playful voice, this book introduces young readers to a variety of animal underdogs and explains how characteristics that might seem like weaknesses are critical for finding food and staying safe in an eat-or-be-eaten world. Along with her engaging animal facts, Stewart weaves in a gentle message of understanding and celebrating differences. Stephanie Laberis's bright, humorous, and scientifically accurate illustrations add to the fun.

Mother Bruce Ryan T. Higgins, 2018-05-08 Bruce the bear likes to keep to himself. That, and eat eggs. But when his hard-boiled goose eggs turn out to be real, live goslings, he starts to lose his appetite. And even worse, the goslings are convinced he's their mother. Bruce tries to get the geese to go south, but he can't seem to rid himself of his new companions. What's a bear to do?

The Animal Trade Clive JC Phillips, 2015-09-14 The trade in live and dead animals and animal parts is a significant aspect of the global economy, but economic considerations are inevitably at odds with optimal animal welfare. Providing a snapshot of the current situation, this book discusses the background to modern international trade, welfare, and the environmental, economic and cultural issues. Covering farm, zoo and sport animals as well as the pet industry, the author draws together the competing interests and issues involved. Critically examining the overall ethics of the current situation and future of animal trade, he considers it within the context of food security, climate change, cultural sensitivities and consumer opinion.

The Welfare of Animals Clive Phillips, 2008-11-07 The Welfare of Animals is an exciting book that will stimulate and provoke its readers. It describes many problems faced by animals - those we use for food, for pleasure or in research, and those simply but harshly affected by shrinking habitats in the face of the ever-growing human population. And yet it is not a depressing read. It focuses not only on the difficulties that animals face, but on their capacity for free-choice, for joy and excitement, and on the possible ways in which the planet can be shared between species if only we take the time and trouble to think more carefully about the impact of our actions. Clive Phillips moved from the United Kingdom to take up a Foundation Chair in Animal Welfare at the University of Queensland, becoming Australia's first Professor of Animal Welfare in 2003. This cultural leap, combined with his travels in countries like Malaysia and Borneo, permits him the unique and broad perspective that forms the backbone of this book. Eschewing the normal territory patrolled by the animal scientist (explaining the physiological basis of the stress response or causation of abnormal behaviour), Clive ventures into jungles and deserts, city centres and tribal homelands, and presents a book that remarkably and successfully combines travel-diary, nature notes, social and cultural history.

The *Language Instinct* received the William James Book Prize from the American Psychological Association and the Public Interest Award from the Linguistics Society of America. This edition includes an update on advances in the science of language since *The Language Instinct* was first published.

Permutation City Greg Egan,1994-04-26 Paul Durham keeps making Copies of himself: software simulations of his own brain and body which can be run in virtual reality, albeit seventeen times more slowly than real time. He wants them to be his guinea pigs for a set of experiments about the nature of artificial intelligence, time, and causality, but they keep changing their mind and baling out on him, shutting themselves down. Maria Deluca is an Autoverse addict; she's unemployed and running out of money, but she can't stop wasting her time playing around with the cellular automaton known as the Autoverse, a virtual world that follows a simple set of mathematical rules as its "laws of physics". Paul makes Maria a very strange offer: he asks her to design a seed for an entire virtual biosphere able to exist inside the Autoverse, modelled right down to the molecular level. The job will pay well, and will allow her to indulge her obsession. There has to be a catch, though, because such a seed would be useless without a simulation of the Autoverse large enough to allow the resulting biosphere to grow and flourish – a feat far beyond the capacity of all the computers in the world.
