*Archaeology and Ancient Religion in the American Midcontinent* Brad H. Koldehoff, Timothy R. Pauketat, 2018-11-06 Analyses of big datasets signal important directions for the archaeology of religion in the Archaic to Mississippian Native North America Across North America, huge data accumulations derived from decades of cultural resource management studies, combined with old museum collections, provide archaeologists with unparalleled opportunities to explore new questions about the lives of ancient native peoples. For many years the topics of technology, economy, and political organization have received the most research attention, while ritual, religion, and symbolic expression have largely been ignored. This was often the case because researchers considered such topics beyond reach of their methods and data. In *Archaeology and Ancient Religion in the American Midcontinent*, editors Brad H. Koldehoff and Timothy R. Pauketat and their contributors demonstrate that this notion is outdated through their analyses of a series of large datasets from the midcontinent, ranging from tiny charred seeds to the cosmic alignments of mounds, they consider new questions about the religious practices and lives of native peoples. At the core of this volume are case studies that explore religious practices from the Cahokia area and surrounding Illinois uplands. Additional chapters explore these topics using data collected from sites and landscapes scattered along the Mississippi and Ohio River valleys. This innovative work facilitates a greater appreciation for, and understanding of, ancient native religious practices, especially their seamless connections to everyday life and livelihood. The contributors do not advocate for a reduced emphasis on technology, economy, and political organization; rather, they recommend expanding the scope of such studies to include considerations of how religious practices shaped the locations of sites, the character of artifacts, and the content and arrangement of sites and features. They also highlight analytical approaches that are applicable to archaeological datasets from across the Americas and beyond.

*The Mountains Sing* Que Mai Phan Nguyen, 2021-03-16 The International Bestseller A New York Times Editors' Choice Selection A Winner of the 2020 Lannan Literary Awards Fellowship [An] absorbing, stirring novel . . . that, in more than one sense, remedies history. —The New York Times Book Review “A triumph, a novelistic rendition of one of the most difficult times in Vietnamese history . . . Vast in scope and intimate in its telling . . . Moving and riveting.” —VIET THANH NGUYEN, author of *The Sympathizer*, winner of the Pulitzer Prize With the epic sweep of Min Jin Lee's *Pachinko* or Yaa Gyasi's *Homegoing* and the lyrical beauty of Vaddey Ratner's *In the Shadow of the Banyan*, *The Mountains Sing* tells an enveloping, multigenerational tale of the Trần family, set against the backdrop of the Việt Nam War. Trần Diệu Lan, who was born in 1920, was forced to flee her family farm with her six children during the Land Reform as the Communist government rose in the North. Years later in Hà Nội, her young granddaughter, Hương, comes of age as her parents and uncles head off down the Hồ Chí Minh Trail to fight in a conflict that tore apart not just her beloved country, but also her family. Vivid, gripping, and steeped in the language and traditions of Việt Nam, *The Mountains Sing* brings to life the human costs of this conflict from the point of view of the Vietnamese people themselves, while showing us the true power of kindness and hope. *The Mountains Sing* is celebrated Vietnamese poet Nguyễn Phan Quế Mai's first novel in English.

**A Pattern Language** Christopher Alexander, 2018-09-20 You can use this book to design a house for yourself with your family; you can use it to work with your neighbors to improve your town and neighborhood; you can use it to design an office, or a workshop, or a public building. And you can use it to guide you in the actual process of construction. After a ten-year silence, Christopher Alexander and his colleagues at the Center for Environmental Structure are now publishing a major statement in the form of three books which will, in their words, lay the basis for an entirely new approach to architecture, building and planning, which will we hope replace existing ideas and practices entirely. The three books are *The Timeless Way of Building*, *The Oregon Experiment*, and this book, *A Pattern Language*. At the core of these books is the idea that people should design for themselves their own houses, streets, and communities. This idea may be radical (it implies a radical transformation of the architectural profession) but it comes simply from the observation that most of the wonderful places of the world were not made by architects but by the people. At the core of the books, too, is the point that in designing their environments people always rely on certain languages, which, like the languages we speak, allow them to articulate and communicate an infinite variety of designs within a forma system which gives them coherence. This book provides a language of this kind. It will enable a person to make a design for almost any kind of building, or any part of the built environment. Patterns, the units of this language, are answers to design problems (How high should a window sill be? How many stories should a building have? How much space in a neighborhood should be devoted to grass and trees?). More than 250 of the patterns in this pattern language are given: each consists of a problem statement, a discussion of the problem with an illustration, and a solution. As the authors say in their introduction, many of the patterns are archetypal, so deeply rooted in the nature of things that it seems likely that they will be a part of human nature, and human action, as much in five hundred years as they are today.

*Tracing the Indo-Europeans* Birgit Anette Olsen,Thomas Olander,Kristian Kristiansen,2019-08-23 Recent developments in aDNA has reshaped our understanding of later European prehistory, and at the same time also opened up for more fruitful collaborations between archaeologists and historical linguists. Two revolutionary genetic studies, published independently in Nature, 2015, showed that prehistoric Europe underwent two successive waves of migration, one from Anatolia consistent with the introduction of agriculture, and a later influx from the Pontic-Caspian steppes which without any reasonable doubt pinpoints the archaeological Yamnaya complex as the cradle of (Core-)Indo-European languages. Now, for the first time, when the preliminaries are clear, it is possible for the fields of genetics, archaeology and historical linguistics to cooperate in a constructive fashion to refine our knowledge of the Indo-European homeland, migrations, society and language. For the historical-comparative linguists, this opens up a wealth of exciting perspectives and new working fields in the intersections between linguistics and neighbouring disciplines, for the archaeologists and geneticists, on the other hand, the linguistic contributions help to endow the material findings with a voice from the past. The present selection of papers illustrate the importance of an open interdisciplinary discussion which will gradually help us in our quest of Tracing the Indo-Europeans.
