Edge Computing Javid Taheri, Shuiguang Deng, 2020-07-06 The book aims to focus only on the 'edge computing' paradigm - as opposed to other similar disciplines such as fog computing - due to its unique characteristics where heterogeneous devices can be equipped with decision-making processes and automation procedures to carry out applications (mostly) across widely geographically distributed areas. The book is sectioned into three parts (models, technologies and applications) to reflect complementary viewpoints and shed light onto various aspect of edge computing platforms. The first part (models) serves as an introductory section to differentiate edge computing from its fairly close/similar paradigms such as fog computing, multi-access edge computing and mobile cloud computing. It then highlights various theoretical models through which edge computing systems could be mathematically expressed and their relevant technological problems could be systematically solved or optimized. The second part (technologies) focuses on different technologies (virtualization, networking, orchestration, etc.) where edge computing systems could be realized. And finally, the third part (applications) focuses on various application domains (e.g., smart cities) where edge computing systems could, or already did,

help in providing novel services beyond the reach of pure/typical cloud computing solutions.

For easier learning, multiple-choice questions can be found at the end of each chapter. The answers to these exercises are found at the very end of the book. The Trial Process J. Alexander Tanford,2009 This book introduces students to the essential skills and bodies of knowledge required for competent representation of clients, including highly practical issues such as courtroom etiquette, the psychology of jury trials, ethical considerations, and trial tactics within a legal and procedural framework. Sample transcripts appear throughout the book to directly illustrate how to conduct various stages of a trial, such as voir dire, opening and closing statements, and direct and cross-examination. The accompanying documentary supplement for this book, Trial Practice Problems and Case Files, may also be used with any trial advocacy textbook that emphasizes skills and tactics. Part One of Trial Practice Problems and Case Files contains a basic series of problems derived from the case files contained in Part Two. Part Two has complete, self-contained case files for four criminal cases and three civil cases. When used for full trials, each case is designed to be evenly balanced so that both sides have realistic chances for favorable verdicts. The case files also provide an excellent basis for developing individual problems and exercises. A Teacher's Manual is available to professors.
