Visual Analytics for Management Elliot Bendoly,Sacha Clark,2016-11-25 This book provides students with an in-depth understanding of the concepts, frameworks and processes used to analyze and present visual data for better decision-making. Expert contributors provide guidance in translating complex concepts from large data sets and how this translation drives management practice. The book's first part provides a descriptive consideration of state-of-the-art science in visual design. The second part complements the first with a rich set of cases and visual examples, illustrating development and best practice to provide students with real-world context. Through their presentation of modern scientific principles, the editors inspire structured discussions of audience and design, recognizing differences in need, bias and effective processes across contexts and stakeholders. This cutting-edge resource will be of value to students in business analytics, business communication and management science classes, who will learn to be capable managers through the effective and direct visual communication of data. Researchers and practitioners will also find this an engaging and informative book.

Frank Whittle (Icon Science) Andrew Nahum,2017-10-05 The story of the jet engine has everything: genius, tragedy, heroism, a world war, the individual vs. the state, and an idea that would change the world. Frank Whittle always maintained that he was held back by a lack of government support. At the very moment in 1943 when his invention was unveiled to the world, his company, Power Jets, was forcibly nationalised. Yet Whittle's brilliance, charm and charisma helped him recruit major support from the British government and the RAF, who gave him the green light to build a jet engine at a time when to do so made little sense. Here is a story of what pushing technology to its limits can achieve - and the effect that such achievement can have on those involved.

The Icon Curtain Yuliya Komska,2015-02-02 The Iron Curtain did not exist—at least not as we usually imagine it. Rather than a stark, unbroken line dividing East and West in Cold War Europe, the Iron Curtain was instead made up of distinct landscapes, many in the grip of divergent historical and cultural forces for decades, if not centuries. This book traces a genealogy of one such landscape—the woods between Czechoslovakia and West Germany—to debunk our misconceptions about the iconic partition. Yuliya Komska transports readers to the western edge of the Bohemian Forest, one of Europe's oldest borderlands, where in the 1950s civilians set out to shape the so-called prayer wall. A chain of new and repurposed pilgrimage sites, lookout towers, and monuments, the prayer wall placed two long-standing German obsessions, forest and border, at the heart of the century's most protracted conflict. Komska illustrates how civilians used the prayer wall to engage with and contribute to the new political and religious landscape. In the process, she relates West Germany's quiet sylvan periphery to the tragic pitch prevalent along the Iron Curtain's better-known segments. Steeped in archival research and rooted in nuanced interpretations of wide-ranging cultural artifacts, from vandalized religious images and tourist snapshots to poems and travelogues, The Icon Curtain pushes disciplinary boundaries and opens new perspectives on the study of borders and the Cold War alike.

The Planning and Scheduling of Production Systems Abdelhakim Artiba,Salah E. Elmaghraby,2012-12-06 If one accepts the premise that there is no wealth without production, whether at the individual or national level, one is immediately led to the conclusion that the study of productive systems lies at

the forefront of subjects that should be intensively, as well as rationally and extensively, studied to achieve the desired 'sustainable growth' of society, where the latter is defined as growth in the quality of life that does not waste the available resources in the long run. Since the end of World War II there has been a remarkable evolution in thinking about production, abetted to a large measure by the nascent field of informatics: the computer technology and the edifices that have been built around it, such as information gathering and dissemination worldwide through communication networks, software products, peripheral interfaces, etc. Additionally, the very thought processes that guide and motivate studies in production have undergone fundamental changes which verge on being revolutionary, thanks to developments in operations research and cybernetics.

VC10: Icon of the Skies Lance Cole, 2017-03-30 “An excellent account of the political battles and the commercial skulduggery . . . and its outstanding service as a transport and tanker with the RAF.” —Firetrench The VC10 was the nation’s biggest jet airliner of its age and regarded as the world’s best-looking airliner. It was safe, fast, and designed to take off from short runways in Africa and Asia, at the request of its main operator BOAC—the airline that would later go on to become today’s British Airways. The VC10 and the larger Super VC10 were beloved by pilots and passengers alike and became icons of the 1960s. They were hugely popular all over the world. Yet the VC10 was eclipsed by Boeing’s 707 which sold by the hundreds, despite the fact that the 707 was less capable and could not initially operate from the runways of the Commonwealth and old British Empire routes, as the VC10 undoubtedly could. This book blends the story of VC10 development with a well-researched tale of corporate and political power play. It asks; just what lay behind the sales failure of the VC10? Politics played an important part of course, as did BOACs tactics, and a whodunnit cast of politico-corporate events and machinations at the highest level of society during the dying days of Empire in 1960s Britain. Key players in the story, from Tony Benn to famous test pilot Brian Trubshaw (Concorde), are cited and quoted. By exploring this historical period in depth and highlighting all the various impediments that stood in the way of success for the VC10, Lance Cole adds an important layer to our understanding of twentieth century history.

Towards User-Centric Transport in Europe 3 Imre Keseru, Annette Randhahn, 2023-03-30 This book gathers contributions to the EU-funded Horizon 2020 project INDIMO (Inclusive Digital Mobility Solutions), its sister projects DIGNITY (Digital Transport in and for Society) and TRIPS (Transport Innovation for Persons with Disabilities Needs Satisfaction), which have been focusing on making transport systems inclusive and accessible for all. Digitalization has enabled the emergence and proliferation of novel, ‘disruptive’ transport and delivery services. These services are often exclusively only available through digital channels such as a smartphone app or website. Yet a substantial segment of the population is at risk of being excluded from these services for a variety of reasons. Therefore, it is strongly necessary to integrate inclusivity and accessibility into the design and operation of mobility services. This book aims at discussing cases of and reasons for digital exclusion in transport. It also investigates the role of participatory and user-centric planning and design methods in making digital mobility more inclusive and accessible. Further, it discusses tools and technologies that could help policy makers to develop digital mobility as a more inclusive and accessible service. This is an open access book.

Viewing Renaissance Art The Open University, Open University Staff, 2007-01-01 This book focuses on the values, priorities, and motives of patrons and the purposes and functions of art works produced north and south of the Alps and in post-Byzantine Crete. It begins by considering the social range and character of Renaissance patronage and ends with a study of Hans Holbein the Younger and the reform of religious images in Basle and England. *Viewing Renaissance Art* considers a wide range of audiences and patrons from the rulers of France to the poorest confraternities in Florence. The overriding premise is that art was not a neutral matter of stylistic taste but an aspect of material production in which values were invested—whether religious, cultural, social, or political.

From Rail-splitter to Icon Gary L. Bunker,2001 A copiously illustrated history of the development of Lincoln's public profile. From Rail-Splitter to Icon is enriched by editorial, news, poetic, and satirical content from contemporary periodicals artfully woven into a topical narrative. The Lincoln images, originally appearing in such publications as Budget of Fun, Comic Monthly, New York Illustrated News, Phunny Phellow, Southern Punch, and Yankee Notions, significantly expand our understanding of the evolution of public opinion toward Lincoln, the complex dynamics of Civil War, popular art and culture, the media, political caricature, and presidential politics. Because of the timely emergence and proliferation of the illustrated periodical, and the convergence of representational technology and sectional conflict, no previous president could have been pictured so fully. But Lincoln also appealed to illustrators because of his distinctive physical features. (One could scarcely conceive of a similar book on James Buchanan, his immediate predecessor.) Despite ever-improving techniques, Lincoln pictorial prominence competed favorably with any succeeding president in the nineteenth century.

This book provides an accessible guide to their story and power.
