**Assessing Progress on the Institute of Medicine Report The Future of Nursing** National Academies of Sciences, Engineering, and Medicine, Institute of Medicine, Committee for Assessing Progress on Implementing the Recommendations of the Institute of Medicine Report The Future of Nursing: Leading Change, Advancing Health, 2016-03-22 Nurses make up the largest segment of the health care profession, with 3 million registered nurses in the United States. Nurses work in a wide variety of settings, including hospitals, public health centers, schools, and homes, and provide a continuum of services, including direct patient care, health promotion, patient education, and coordination of care. They serve in leadership roles, are researchers, and work to improve health care policy. As the health care system undergoes transformation due in part to the Affordable Care Act (ACA), the nursing profession is making a wide-reaching impact by providing and affecting quality, patient-centered, accessible, and affordable care. In 2010, the Institute of Medicine (IOM) released the report The Future of Nursing: Leading Change, Advancing Health, which made a series of recommendations pertaining to roles for nurses in the new health care landscape. This current report assesses progress made by the Robert Wood Johnson Foundation/AARP Future of Nursing: Campaign for Action and others in implementing the recommendations from the 2010 report and identifies areas that should be emphasized over the next 5 years to make further progress toward these goals.

*Single-Walled Carbon Nanotubes* Yan Li, Shigeo Maruyama, 2019-05-16 The series Topics in Current Chemistry Collections presents critical reviews from the journal Topics in Current Chemistry organized in topical volumes. The scope of coverage is all areas of chemical science including the interfaces with related disciplines such as biology, medicine and materials science. The goal of each thematic volume is to give the non-specialist reader, whether in academia or industry, a comprehensive insight into an area where new research is emerging which is of interest to a larger scientific audience. Each review within the volume critically surveys one aspect of that topic and places it within the context of the volume as a whole. The most significant developments of the last 5 to 10 years are presented using selected examples to illustrate the principles discussed. The coverage is not intended to be an exhaustive summary of the field or include large quantities of data, but should rather be conceptual, concentrating on the methodological thinking that will allow the non-specialist reader to understand the information presented. Contributions also offer an outlook on potential future developments in the field.

**Halide Perovskites** Tze-Chien Sum, Nripan Mathews, 2019-03-25 Real insight from leading experts in the field into the causes of the unique photovoltaic performance of perovskite solar cells, describing the fundamentals of perovskite materials and device architectures. The authors cover materials research and development, device fabrication and engineering methodologies, as well as current knowledge extending beyond perovskite photovoltaics, such as the novel spin physics and multiferroic properties of this family of materials. Aimed at a better and clearer understanding of the latest developments in the hybrid perovskite field, this is a must-have for material scientists, chemists, physicists and engineers entering or already working in this booming field.

*Doping of Carbon Nanotubes* Sergey Bulyarskiy, Alexandr Saurov, 2017-07-01 This book addresses the control of electronic properties of carbon nanotubes. It presents thermodynamic calculations of the formation of impurities and defects in the interaction of nanotubes with hydrogen, oxygen, nitrogen and boron, based on theoretical models of the formation of defects in carbon nanotubes. It is shown that doping and adsorption lead to changes in the electronic structure of the tubes as well as to the appearance of impurity states in the HOMO-LUMO gap. The book presents examples of specific calculations for doping of carbon nanotubes with oxygen, hydrogen, nitrogen and boron, together with numerous experimental results and a comparison with the author's thermodynamic calculations. Possible directions of the technological processes of optimization are pointed out, as well as

the perspectives of p-n-transition creation with the help of carbon nanotube arrays. The results presented were derived from the physics of the processes and a theoretical model of the technological processes. Though a wealth of empirical information on doping nanotubes has been accumulated in the scientific literature, what is lacking is a theoretical model for their analysis. As such, the book develops a thermodynamic model of the self-organization of structural elements in multicomponent systems – including carbon nanotubes, clusters and precipitates in condensed matter – and subsequently adapts it to the doping of carbon nanotubes. This approach allows readers to gain a far deeper understanding of the processes of doping carbon nanotubes.

The New Border Wars Klaus Dodds, 2021-09-28 An enlightening look at contemporary border tensions—from the Gaza Strip to the space race—by one of the world's leading experts in geopolitics. Border expert Klaus Dodds journeys into the geopolitical clashes of tomorrow in an eye-opening tour of border walls both literal and figurative. In the Himalayas, the Mediterranean, and elsewhere, the tension inherent to trying to divide the world into separate parcels has not gone away. And with climate change shifting our natural borders, from mountains to glaciers to rivers, the question of how we live in a world that's becoming warmer and wetter and growing in population looms large. With wide-ranging insight and provocative analysis, Dodds shows why we are more likely to see more walls, barriers, and securitization in our daily lives. The New Border Wars examines just what borders truly mean in the modern world: How are they built; what do they signify for citizens and governments; and how do they help us understand our political past and, most importantly, our diplomatic future?

**New Frontiers in Operational Oceanography** Godae GODAE OceanView, 2018-09-03 The implementation of operational oceanography in the past 15 years has provided many societal benefits and has led to many countries adopting a formal roadmap for providing ocean forecasts. Continuing the tradition of two very successful international summer schools held in France in 2004 (Chassignet and Verron, 2006) and in Australia in 2010 (Schiller and Brassington, 2011), a third international school that focused on frontier research in operational oceanography was held in Majorca in 2017. In the coming years, graduate students and young scientists will be challenged by many new observations (SWOT, Sentinel, AUVs, floats, etc.), complex high resolution numerical models and data assimilation (high resolution, predictability, uncertainty, changing computing platforms, etc.), and the need to work on many scales (open ocean-shelf interactions, coupled ocean-ice-atmosphere, biogeochemistry, etc.). The latter school brought together senior experts and young researchers (pre- and post-doctorate) from across the world and exposed them to the latest research in oceanography, specifically how it will impact operational oceanography. This book is a compilation of the lectures presented at the school and presents a summary of the current state-of-the-art in operational oceanography research. About the Editors: Eric P. Chassignet is a professor of Physical Oceanography in the Department of Earth, Ocean and Atmospheric Science and director of the Center for Ocean-Atmospheric Prediction Studies at Florida State University (Tallahassee, FL, USA). Ananda Pascual is a research scientist at the Instituto Mediterráneo de Estudios Avanzados, IMEDEA (CSIC-UIB) in Esporles (Majorca, Spain). Joaquin Tintore is professor of Physical Oceanography at IMEDEA and director of SOCIB (Sistema d'Observacio i Predictio Coastaner de les Iles Balears) in Palma (Majorca, Spain). Jacques Verron is a senior research scientist emeritus at the Institut des Geosciences de l'Environnement (IGE) (Grenoble, France). About GODAE OceanView: GODAE OceanView provides coordination and leadership in consolidating and improving global and regional ocean analysis and forecasting systems on an international level. It encourages international collaboration to address the scientific and technical challenges associated with operational oceanography. It also fosters research that will lead to the enhancement of existing systems and the development of next generation of ocean prediction systems.

Light Scattering in Solids IX Manuel Cardona, Roberto Merlin, 2006-12-15 This volume treats new materials (nanotubes and quantum dots) and new techniques (synchrotron radiation scattering and cavity confined scattering). In the past five years, Raman and Brillouin scattering have taken a place

among the most important research and characterization methods for carbon nanotubes. Among the novel techniques discussed in this volume are those employing synchrotron radiation as a light source.

**Contests of Initiative** Raymond Kuo,2020-12-21 China is engaged in a widespread assertion of sovereignty in the South and East China Seas. It employs a gray zone strategy: using coercive but sub-conventional military power to drive off challengers and prevent escalation, while simultaneously seizing territory and asserting maritime control. Contests of Initiative: Confronting China's Gray Zone Strategy provides three courses of action for the US and its Asian security partners to preserve regional peace, uphold freedom of the seas, and deter conflict. Building on theories of escalation dominance, Dr. Kuo casts gray zone strategies as contests of initiative. States that direct the operational tempo and choice of engagements can exploit gaps in political commitment to seize objectives. Once lost, their opponents face much higher costs to reestablish control. Using case analysis backed by statistical methods, the three courses of action reach different balances between American leadership, allied costs, and Chinese responses. Ultimately, the book recommends the U.S. employ an extended deterrence approach. Washington should foster a regional sovereignty settlement, establish a political-military coordinating institution, and attain dominance in sub-conventional capabilities using unmanned ISR and strike platforms to contest and break Beijing's control. The study will be of great value to those in the national security community with responsibility for US policies in East Asia, but it also provides important insights for strategic planners and analysts who will be grappling with the larger strategic dimensions of US-China relations, certain to be the paramount issue in global politics for the foreseeable future. Dr. Raymond Kuo is an independent political scientist

focused on international security and East Asia. In addition to this book, he authored *Following the Leader: International Order, Alliance Strategies, and Emulation* (Stanford University Press, forthcoming 2021), explaining how military alliance strategies generate international order. Dr. Kuo's other research has appeared in *International Security*, the *Journal of Conflict Resolution*, *The National Interest*, and *The Diplomat*, among others. He previously served in the United Nations, the National Democratic Institute, and the Democratic Progressive Party (Taiwan). Dr. Kuo holds a Ph.D. and M.A. from Princeton University, an M.Sc. from the London School of Economics, and a B.A. from Wesleyan University.

The Chesapeake House Cary Carson, Carl R. Lounsbury, 2013-03-25 For more than thirty years, the architectural research department at Colonial Williamsburg has engaged in comprehensive study of early buildings, landscapes, and social history in the Chesapeake region. Its painstaking work has transformed our understanding of building practices in the colonial and early national periods and thereby greatly enriched the experience of visiting historic sites. In this beautifully illustrated volume, a team of historians, curators, and conservators draw on their far-reaching knowledge of historic structures in Virginia and Maryland to illuminate the formation, development, and spread of one of the hallmark building traditions in American architecture. The essays describe how building design, hardware, wall coverings, furniture, and even paint colors telegraphed social signals about the status of builders and owners and choreographed social interactions among everyone who lived or worked in gentry houses, modest farmsteads, and slave quarters. The analyses of materials, finishes, and carpentry work will fascinate old-house buffs, preservationists, and historians alike. The lavish color photography is a delight to behold, and the detailed catalogues of architectural elements provide a reliable guide to the form, style, and

chronology of the region's distinctive historic architecture.
