Launch (Updated & Expanded Edition) Jeff Walker, 2021-07-27 From the creator of Product Launch Formula: A new edition of the #1 New York Times best-selling guide that's redefined online marketing and helped countless entrepreneurs make millions. The revised and updated edition of the #1 New York Times bestseller Launch will build your business - fast. Whether you've already got an online business or you're itching to start one, this is a recipe for getting more traction and a fast start. Think about it: What if you could launch like Apple or the big Hollywood studios? What if your prospects eagerly counted down the days until they could buy your product? And you could do it no matter how humble your business or budget? Since 1996, Jeff Walker has been creating hugely successful online launches. After bootstrapping his first Internet business from his basement, he quickly developed a process for launching new products and businesses with unprecedented success. And once he started teaching his formula to other entrepreneurs, the results were simply breathtaking. Tiny, home-based businesses started doing launches that brought in tens of thousands, hundreds of thousands, and even millions of dollars. Whether you have an existing business or you're starting from scratch, this is how you start fast. This formula is how you engineer massive success. Now the question is this: Do you want to start slow, and fade away from there? Or are you ready for a launch that will change the future of your business and your life?

Moon Launch! Charles D. Benson, William B. Faherty, 2020-10-15 The one thing for which this century will be remembered 500 years from now was: This was the century when we began the exploration of space.--Arthur M. Schlesinger Tributes to Moonport: A History of Apollo Launch Facilities and Operations A thorough account of the complex scientific, engineering, and managerial efforts that undergirded the astounding events that the National Aeronautics and Space Administration carried out.--Journal of American History Another simply superb NASA official history. . . . Construction, administration, and technology are carefully interwoven in an unusually candid and frank treatment of the history of America's first lunar launching facility.--Aerospace Historian Moon Launch! re-creates the exciting story of the astronauts and engineers, scientists and technicians, politicians and public citizens who expanded the world's understanding of humanity's potential, the people responsible for the Project Apollo flights to the moon. Through their teamwork at the Kennedy Space Center, Cape Canaveral became the spaceport for the nation and, in the mind of many, the gateway to the universe. A companion to Gateway to the Moon and also part of the 1978 NASA History Series Moonport volume, this illustrated book describes the seven missions to the moon launched between 1969 and 1972. With the exception of the abortive Apollo 13 flight, all landed successfully. As the story progresses, astronauts explore the moon's surface in the lunar rover (complete with bucket seats and power steering), set up experiments, and bring back hundreds of pounds of lunar geological samples. The book concludes with a description of the last and most spectacular liftoff, Apollo 17, launched on a dark December night before a crowd of nearly 500,000 visitors. Charles D. Benson, a retired colonel of the U.S. Army, is the coauthor of the official history of the Skylab orbital workshop. William B. Faherty, director of the Museum of the Western Jesuit Missions in Hazelwood, Missouri, retired professor of history at St. Louis University, and archivist emeritus of the Midwest Jesuit Archives, is the author of 25 books, including the historical novel The Call of Pope Octavian.

Post-Launch Calibration of Satellite Sensors Stanley A. Morain,Amelia M. Budge,2004-07-15
Increasingly, in the field of earth observation imagery, there is a need for image quality to be assessable in traceable Standard International Units (SIU), and for the standardization of common mapping projections. These two needs, plus the increased usage of combinations of data and image types, provided the stimuli for the development of this important volume. Prepared by members of the Joint ISPRS/CEOS WGCV Task Force on Radiometric and Geometric Calibration, this book is a valuable text for those in the fields of remote sensing technology, calibration, Earth observation, and electro-optical sensor parameters. By detailing current calibration procedures and the latest 'best practices', this latest addition to the ISPRS Series addresses the need for consistency throughout the discipline, and encourages the development of coherent, high-quality Earth observation imagery.

Practical Design of Flight Control Systems for Launch Vehicles and Missiles N.V. Kadam,2009-06-15 This book gives in a concise and easy to understand form the various aspects of Practical Design of Flight Control Systems for Launch Vehicles and Missiles. It covers almost every aspect of Flight Control System Design which a designer would like to know, such as mission

considerations, control requirements for various segments of the flight trajectory and different types of control effectors. It further gives generalized equations of motion with a novel method of incorporating structural flexibility and propellant sloshing which does not require rederivation, and very easy and common sense approach to deriving slosh and gimballed engine dynamic equations. Subsequently it gives the control system configurations, power plant sizing, loop design for linearised system and detailed analysis and design of on-off reaction control systems. It also covers various software features which are necessary for actual implementation of the design in flight missions, robustness features to avoid malfunctioning in some circumstances, design validation aspects including end-to-end sign checks and describes some flight experiences which called for design updates. The book is unique for its strong practical flavour and is directly useful to the working engineers in the field and post graduate students in Aerospace Engineering.

The Challenger Launch Decision Diane Vaughan, 2016-01-04 "An in-depth account of the events and personal actions which led to a great tragedy in the history of America's space program." —James D. Smith, former Solid Rocket Booster Chief, NASA, Marshall Space Flight Center When the Space Shuttle Challenger exploded on January 28, 1986, millions of Americans became bound together in a single, historic moment. Many still vividly remember exactly where they were and what they were doing when they heard about the tragedy. Diane Vaughan recreates the steps leading up to that fateful decision, contradicting conventional interpretations to prove that what occurred at NASA was not skullduggery or misconduct but a disastrous mistake. Why did NASA managers, who not only had all the information prior to the launch but also were warned against it, decide to proceed? In retelling how the decision unfolded through the eyes of the managers and the engineers, Vaughan uncovers an incremental descent into poor judgment, supported by a culture of high-risk technology. She reveals how and why NASA insiders, when repeatedly faced with evidence that something was wrong, normalized the deviance so that it became acceptable to them. In a new preface, Vaughan reveals the ramifications for this book and for her when a similar decision-making process brought down NASA's Space Shuttle Columbia in 2003. "Vaughn finds the traditional explanation of the [Challenger] accident to be profoundly unsatisfactory . . . One by one, she unravels the conclusions of the Rogers Commission." —The New York Times "A landmark study." —Atlantic "Vaughn gives us a rare view into the working level realities of NASA . . . The cumulative force of her argument and evidence is compelling." —Scientific American
