*Pirates of Pensacola* Keith Thomson, 2005-04 The Cooke and Hood families have been at each other's throats since the Spanish Main days. The latest chapter in their piratic rivalry takes place in 2004, when an old treasure map turns up. None of this seems to matter to Morgan Cooke, a cowardly, landlubbing accountant entirely ignorant of his heritage until his estranged father, Isaac, in need of crewmen, kidnaps him and thrusts him into the fray. When Morgan wakes up on a boat in the middle of the Caribbean, he learns that piracy still flourishes, albeit with far more discretion than in the old days--pirates disguise their fast boats as shrimpers or tugs--but with no less bloodshed. Judging even a shot at riches vastly preferable to a return to his lonely, fluorescent-lit work station existence, Morgan pierces his ear, dons the eye patch and peg leg, and set sail for glorious adventure.

**Optical Fiber Sensor Technology** L.S. Grattan, B.T. Meggitt, 2013-03-09 Environmental and chemical sensors in optical fiber sensor technology The nature of the environment in which we live and work, and the precarious state of many aspects of the natural environment, has been a major lesson for scientists over the last few decades. Public awareness of the issues involved is high, and often coupled with a scepticism of the ability of the

scientist and engineer to provide an adequate, or even rapid solution to the preservation of the environment before further damage is done, and to achieve this with a minimum of expenditure. Monitoring of the various aspects of the environment, whether it be external or internal to ourselves and involving chemical, physical or biomedical parameters is an essential process for the well-being of mankind and of the individual. Legislative requirements set new standards for measurement and control all around us, which must be met by the most appropriate of the technologies available, commensurate with the costs involved. Optical fiber sensor technology has a major part to play in this process, both to complement existing technologies and to promote new solutions to difficult measurement issues. The developments in new sources and detectors covering wider ranges of the electromagnetic spectrum, with higher sensitivity, allow the use of techniques that some time ago would have been considered inappropriate or lacking in sufficient sensitivity.

**Achtung-Panzer!** Heinz Guderian, 1995 This is one of the most significant military books of the twentieth century. By an outstanding soldier of independent mind, it pushed forward the evolution of land warfare and was directly responsible for German armoured supremacy in the early years of the Second World War. Published in 1937, the result of 15 years of careful study since his days on the German General Staff in the First World War, Guderian's book argued, quite clearly, how vital the proper use of tanks and supporting armoured vehicles would be in the conduct of a future war. When that war came, just two years later, he proved it, leading his Panzers with distinction in the Polish, French and Russian campaigns. Panzer warfare had come of age, exactly as he had forecast. This first English translation of Heinz Guderian's classic book - used as a textbook by Panzer officers in the war - has an introduction and extensive background notes by the modern English historian Paul Harris.

**Brand Name Bullies** David Bollier, 2008-04-21 An impassioned, darkly amusing look at how corporations misuse copyright law to stifle creativity and free speech If you want to make fun of Mickey or Barbie on your Web site, you may be hearing from some corporate lawyers. You should also think twice about calling something fair and balanced or publicly using Martin Luther King Jr.'s I Have a Dream speech. It may be illegal. Or it may be entirely legal, but the distinction doesn't matter if you can't afford a lawyer. More and more, corporations are grabbing and asserting rights over every idea and creation in our world, regardless of the law's intent or the public interest. But beyond the humorous absurdity of all this, there lies a darker problem, as David Bollier shows in this important new book. Lawsuits and legal bullying clearly prevent the creation of legitimate new software, new art and music, new literature, new businesses, and worst of all, new scientific and medical research. David Bollier (Amherst, MA) is cofounder of Public Knowledge and Senior Fellow at the Norman Lear Center, USC Annenberg School for Communication. His books include *Silent Theft*.
