Liquidity Management under Fixed Exchange Rate with Open Capital Account Mariam El Hamiani Khatat,Mr.Romain M Veyrune,2019-03-18 This paper introduces a theoretical framework for liquidity management under fixed exchange rate arrangement, derived from the price-specie flow mechanism of David Hume. The framework highlights that the risk of short-term money market rates un-anchoring from the uncovered interest rate parity due to money and foreign exchange market frictions could jeopardize financial stability and market development. The paper then discusses operational solutions that stabilize money market rates close to the level implied by the Uncovered Interest Rate Parity (UIP). Liquidity management under fixed exchange rate with an open capital account presents specific challenges due to: (1) the larger liquidity shocks induced by foreign reserve swings that challenge the development of money markets; and (2) more complicated liquidity forecasts. The theoretical framework is empirically tested based on the estimate of "offset" coefficients for Denmark and Hong Kong SAR.

A Holistic Solution for Smart Grids based on LINK– Paradigm Albana Ilo,Daniel-Leon Schultis,2021-11-18 This book presents a holistic solution for Smart Grids that includes the electricity: producers, electricity storages, grids, market and customer plants. The authors have derived the architectural paradigm for Smart Grids LINK from the signature of their fractal structure. The presented LINK-based holistic architecture enables the large-scale integration of distributed energy resources by minimising the data to be exchanged, thus considering privacy and cyber security by design. The straightforwardness of LINK-Solution is related to its standardised structures, enabling the coupling of energy and non-energy sectors and Energy

Communities. The Volt/var chain control as one of the most challenging operation processes of Smart Grids is covered in detail in this edition. Chapter by chapter, the reader is smoothly introduced to this unique solution, facilitating its practical implementation. This book is a valuable resource for experts, consultants, engineers, scientists, and students in the Smart Grids area and actors of the electricity market and politicians.

People's Republic of China-Hong Kong Special Administrative Region International Monetary Fund. Asia and Pacific Dept,2017-01-12 This 2016 Article IV Consultation highlights that with a soft global trade environment and a downturn in tourism arrivals from Mainland China, the growth rate of Hong Kong Special Administrative Region is expected to have slowed to 1.5 percent in 2016. Growth is likely to pick up modestly to about 2 percent in 2017, with private consumption continuing to be a main driver supported by a steady labor market. The current account surplus remained below 3 percent of GDP. Over the longer term, aging pressures may weaken the structural fiscal position, requiring fiscal planning to alleviate the decline, and a housing supply shortage also needs to be tackled.
