**Carbon Finance: A Risk Management View** Martin Hellmich, Rudiger Kiesel, 2021-11-24 Mastering climate change has been recognised as a major challenge for the current decade. Besides the physical risks of climate change, the accompanying economic risks are substantial. Carbon Finance: A Risk Management View provides an in-depth analysis of how climate change will affect all aspects of financial markets and how mathematical and statistical methods can be used to analyse, model and manage the ensuing financial risks. There is a focus on the transition risk (termed carbon risk), but also a discussion of the impact of physical risks (as these risks are closely entangled) on the way to low carbon economies. This is a valuable overview for readers seeking an analysis of carbon risks from the perspective of financial risk management, utilising quantitative risk management tools.

*Operations Research for Unmanned Systems* Jeffrey R. Cates, John Q. Dickmann, Jr., 2016-05-02 The first edited volume addressing analysis for unmanned vehicles, with focus on operations research rather than engineering. The editors have a unique combination of extensive operational experience and technical expertise. Chapters address a wide-ranging set of examples, domains and applications. Accessible to a general readership and also informative for experts.

NBER Macroeconomics Annual 2021 Martin Eichenbaum, Erik Hurst, 2022-05-17 The NBER Macroeconomics Annual 2021 presents research-central issues in contemporary macroeconomics. Robert Hall and Marianna Kudlyak examine unemployment dynamics during economic recoveries. They present new empirical findings and explore models in which the labor market gradually draws down the stock of unemployed workers in the aftermath of a downturn. Titan Alon, Sena Coskun, Matthias Doepeke, David Koll, and Michèle Tertilt analyze the relative decline in employment of women during the COVID-19 pandemic and the associated global recession. They show that increased childcare needs, which fell more heavily on women, and differences in occupations both contributed. In the case of the US, however, each of these factors account for less than 20% of the gender gap in hours worked during the pandemic. Richard Rogerson and Johanna Wallenius study the employment rates of older workers in OECD countries over the last forty years. An expansion of institutions incentivizing retirement, concurrent with negative aggregate shocks between 1970 and 1995, led to falling employment rates. This trend started to reverse in the mid-1990s when many of these institutions, such as public pension programs, were cut back. Michael Barnett, William Brock, and Lars Peter Hansen explore the consequences of risk, ambiguity, and model misspecification in climate policy design. They consider carbon emissions pricing and the effects of different sources of uncertainty—such as future information about environmental damage, uncertainties in carbon and

temperature dynamics and damage functions, and the role of future green technologies-on policy design. Michael Kremer, Jack Willis, and Yang You present new evidence suggesting a steady trend toward income convergence across countries since the late 1980s. They find convergence in various determinants of economic growth across countries and a flattening of the relationship between growth and these determinants. The paper challenges theories of growth arising after earlier rejections of the neoclassical growth model.

**Concrete Permeability and Durability Performance** Roberto J. Torrent,Rui D. Neves,Kei-ichi Imamoto,2021-12-22 Durability and service life design of concrete constructions have considerable socio-economic and environmental consequences, in which the permeability of concrete to aggressive intruders plays a vital role. Concrete Permeability and Durability Performance provides deep insight into the permeability of concrete, moving from theory to practice, and presents over 20 real cases, such as Tokyo's Museum of Western Art, Port of Miami Tunnel and Hong Kong-Zhuhai-Macao sea-link, including field tests in the Antarctic and Atacama Desert. It stresses the importance of site testing for a realistic durability assessment and details the Torrent Method for non-destructive measurement of air-permeability. It also delivers answers for some vexing questions: Should the coefficient of permeability be

expressed in m<sup>2</sup> or m/s? How to get a mean pore radius of concrete from gas-permeability tests? Why should permeability preferably be measured on site? How can service life of reinforced concrete structures be predicted by site testing of gas-permeability and cover thickness? Practitioners will find stimulating examples on how to predict the coming service life of new structures and the remaining life of existing structures, based on site testing of air-permeability and cover thickness. Researchers will value theoretical principles, testing methods, as well as how test results reflect the influence of concrete mix composition and processing.

**Beyond Smart Beta** Gökhan Kula, Martin Raab, Sebastian Stahn, 2017-04-06 Delve into ETFs for smarter investing and a weatherproof portfolio Beyond Smart Beta is the investor's complete guide to index investing, with deep analysis, expert clarification and smart strategies for active portfolio management. From the general to the obscure, this book digs into every aspect of Exchange Traded Funds (ETFs) including ETCs and ETNs to break down the jargon and provide accessible guidance on utilising the indices as part of a more productive investment strategy. Succinct explanations of terms and concepts help you better grasp ETP anatomy, mechanics and practices, while examples, charts and graphs provide quick visual reference for total understanding. The expert author team examines the risks and benefits associated with various indexing approaches, sharing critical review of next-generation methods to help you make well-informed investment decisions. ETFs provide a solid

foundation within mature and well-researched markets, allowing investors to focus on areas where active management has the potential to reap higher returns. This book shows you how to take full advantage of the growth of this market to strengthen your portfolio for the long term. Assess the current landscape and the anatomy of ETFs/ETPs Understand ETP handling, costs, trading, and investment Evaluate the pros and cons of next-generation indexing approaches Avoid risk while incorporating indices into an active portfolio management strategy Index concepts have evolved from basic, passive investments through Smart Beta, and are evolving into a third generation of products that will quickly become an important element of investor portfolios. Key benefits have propelled ETFs to surpass hedge funds in global capital, and the growth shows no sign of slowing. Beyond Smart Beta provides a primer for investors seeking to understand – and take advantage of – these lucrative new products.

**DRYLAND TECHNOLOGY 2ND EDITION** S. R. Bhakar,M. L. Jat,Anil Kumar Kothari,Shanti Kumar Sharma,2016-01-01 This book, primarily designed to cater to the needs of undergraduate and post graduate students of Agricultural Engineering and Agriculture, research scholars, professionals and policy planners associated with dryland farming or rain fed farming covers major topics on land and water resources and their management aspects. Entire content has been divided into 22 chapters with solved examples and case studies. First 4 chapters are devoted mainly in explaining the basic dryland farming, dryland engineering, rainfall and water balance analysis and climate, weather forecasting with solved examples and case studies. 18 chapters on land and water resources management aspects, implements used in different field operations and also on storage, value addition of agricultural products, livelihood security of dryland farmers with communication facilities and resources centre and alternate landuse planning and Watershed Management. A sincere attempt has been made to compile and present the text in quickly understandable form. Well drawn diagrams, understanding the Dryland Technology and livelihood aspects of dryland farmers. This could be a good text book for undergraduate and post graduate students, a reference tool for professional and good teaching material for teachers in the field of land and water resources management under dryland ecosystem, and also for scientists working in the field of rain fed farming.

*Handbook of Fixed-Income Securities* Pietro Veronesi,2016-04-04 A comprehensive guide to the current theories and methodologies intrinsic to fixed-income securities Written by well-known experts from a cross section of academia and finance, *Handbook of Fixed-Income Securities* features a compilation of the most up-to-date fixed-income securities techniques and methods. The book presents crucial topics of fixed income in an accessible and logical format. Emphasizing empirical research and real-life applications, the book explores a wide range of topics from the risk and return of fixed-income investments, to the impact of monetary policy on interest rates, to the post-crisis new regulatory landscape. Well organized to cover critical topics in fixed income, *Handbook of Fixed-Income Securities* is divided into eight main sections that feature:

- An introduction to fixed-income markets such as Treasury bonds, inflation-protected securities, money markets, mortgage-backed securities, and the basic analytics that characterize them
- Monetary policy and fixed-income markets, which highlight the recent empirical evidence on the central banks' influence on interest rates, including the recent quantitative easing experiments
- Interest rate risk measurement and management with a special focus on the most recent techniques and methodologies for asset-liability management under regulatory constraints
- The predictability of bond returns with a critical discussion of the empirical evidence on time-varying bond risk premia, both in the

United States and abroad, and their sources, such as liquidity and volatility • Advanced topics, with a focus on the most recent research on term structure models and econometrics, the dynamics of bond illiquidity, and the puzzling dynamics of stocks and bonds • Derivatives markets, including a detailed discussion of the new regulatory landscape after the financial crisis and an introduction to no-arbitrage derivatives pricing • Further topics on derivatives pricing that cover modern valuation techniques, such as Monte Carlo simulations, volatility surfaces, and no-arbitrage pricing with regulatory constraints • Corporate and sovereign bonds with a detailed discussion of the tools required to analyze default risk, the relevant empirical evidence, and a special focus on the recent sovereign crises A complete reference for practitioners in the fields of finance, business, applied statistics, econometrics, and engineering, *Handbook of Fixed-Income Securities* is also a useful supplementary textbook for graduate and MBA-level courses on fixed-income securities, risk management, volatility, bonds, derivatives, and financial markets. Pietro Veronesi, PhD, is Roman Family Professor of Finance at the University of Chicago Booth School of Business, where he teaches Masters and PhD-level courses in fixed income, risk management, and asset pricing. Published in leading academic journals and honored by numerous awards, his research focuses on stock and bond valuation, return predictability, bubbles and crashes, and the relation between asset prices and government policies.

*Quantal Response Equilibrium* Jacob K. Goeree, Charles A. Holt, Thomas R. Palfrey, 2016-06-28 Quantal Response Equilibrium presents a stochastic theory of games that unites probabilistic choice models developed in psychology and statistics with the Nash equilibrium approach of classical game theory. Nash equilibrium assumes precise and perfect decision making in games, but human behavior is inherently stochastic and people realize that the behavior of others is not perfectly predictable. In contrast, QRE models choice behavior as probabilistic and extends classical game theory into a more realistic and useful framework with broad applications for economics, political science, management, and other social sciences. Quantal Response Equilibrium spans the range from basic theoretical foundations to examples of how the principles yield useful predictions and insights in strategic settings, including voting, bargaining, auctions, public goods provision, and more. The approach provides a natural framework for estimating the effects of behavioral factors like altruism, reciprocity, risk aversion, judgment fallacies, and impatience. New theoretical results push the frontiers of models that include heterogeneity, learning, and well-specified behavioral modifications of rational choice and rational expectations. The empirical relevance of the theory is enhanced by discussion of data from controlled laboratory experiments, along with a detailed users' guide for estimation techniques. Quantal Response Equilibrium makes pioneering game-theoretic methods and interdisciplinary applications available to a wide audience.

**Radiocarbon Dating** R.E. Taylor, Ofer Bar-Yosef, 2016-06-03 This volume is a major revision and expansion of Taylor's seminal book Radiocarbon Dating: An Archaeological Perspective. It covers the major advances and accomplishments of the 14C method in archaeology and analyzes factors that affect the accuracy and precision of 14C-based age estimates. In addition to reviewing the basic principles of the method, it examines 14C dating anomalies and means to resolve them, and considers the critical application of 14C data as a dating isotope with special emphasis on issues in Old and New World archaeology and late Quaternary paleoanthropology. This volume, again a benchmark for 14C dating, critically reflects on the method and data that underpins, in so many cases, the validity of the chronologies used to understand the prehistoric archaeological record.

Decisions to Imprison Rasmus H. Wandall, 2016-05-13 Rasmus Wandall uses quantitative and qualitative methods from studies carried out in Denmark, to address the formal and informal norms and ideologies that are used to generate decisions to imprison. Focusing on the operations of the courtroom participants, his work investigates how court decision-making is organized to allow the sentencing procedure to be open to more than its formal legal framework, while at the same time keeping the sentencing within the boundaries of law and legal validity. The author uses the theory of law's

operational closure, developed by Niklas Luhmann. The theory provides an advantageous point of departure to capture the close and subtle interactions between law's need for validity and for contextual openness in every legal operation - including court decision-making.

### **Thermochemical and Catalytic Conversion Technologies for Future**

**Biorefineries** Pradeep Verma, 2022-10-10 This book is an attempt to provide an account of biomass recalcitrance and available physical and chemical methods for biomass pretreatment and hydrolysis. Its focuses on understanding the critical role of enzymes in the development of integrated biorefinery. The book also presents an overview of the utilization of waste biomass as a support system for enzyme immobilization for easy recovery and reuse for multiple cycles. strategies where enzymes can be used. The book also attempts to understand how enzymes can play a vital role in waste valorization for energy and biomaterial production. Further, the book will present an overview of how advanced technologies such as omics and in-silico approaches can help in understanding the chemistry affecting recalcitrance and the mechanism of enzyme catalysts in their bioconversion. An understanding of the life cycle assessment of waste biomass biorefinery will be needed before its implementation. The book will serve as additional reading material for undergraduate and graduate students of energy studies, chemical engineering, applied biotechnology, and environmental sciences. This book is of interest to academicians, scientists, environmentalists, and policymakers.

*Computational and Cognitive Approaches to Narratology* Ogata, Takashi,Akimoto, Taisuke,2016-07-15 Studying narratives is often the best way to gain a good understanding of how various aspects of human information are organized and integrated—the narrator employs specific informational methods to build the whole structure of a narrative through combining temporally constructed events in light of an array of relationships to the narratee and these methods reveal the interaction of the rational and the sensitive aspects of human information. Computational and Cognitive Approaches to Narratology discusses issues of narrative-related information and communication technologies, cognitive mechanism and analyses, and theoretical perspectives on narratives and the story generation process. Focusing on emerging research as well as applications in a variety of fields including marketing, philosophy, psychology, art, and literature, this timely publication is an essential reference source for researchers, professionals, and graduate students in various information technology, cognitive studies, design, and creative fields.

Rocha,Eufemia Tarantino,Carmelo Maria Torre,2021-09-11 The ten-volume set LNCS 12949 – 12958 constitutes the proceedings of the 21st International Conference on Computational Science and Its Applications, ICCSA 2021, which was held in Cagliari, Italy, during

September 13 – 16, 2021. The event was organized in a hybrid mode due to the Covid-19 pandemic. The 466 full and 18 short papers presented in these proceedings were carefully reviewed and selected from 1588 submissions. Part VI of the set includes the proceedings of the following workshops:

International Workshop on Digital Transformation and Smart City (DIGISMART 2021); International Workshop on Econometrics and Multidimensional Evaluation in Urban Environment (EMEUE 2021); International Workshop on Transformational Urban Mobility: Challenges and Opportunities During and Post COVID Era (FURTHER2021); International Workshop on Geodesign in Decision Making: meta planning and collaborative design for sustainable and inclusive development (GDM 2021); 11th International Workshop on Future Computing System Technologies and Applications (FiSTA 2021); International Workshop on Geographical Analysis, Urban Modeling, Spatial Statistics (GEOG-AND-MOD 2021).

*Computing and Combinatorics* Thang N. Dinh, My T. Thai, 2016-07-19 This book constitutes the refereed proceedings of the 22nd International Conference on Computing and Combinatorics, COCOON 2016, held in Ho Chi Minh City, Vietnam, in August 2016. The 50 revised full papers presented in this book were carefully reviewed and selected from various submissions. The papers cover various topics including: Theory and Algorithms; Parameterized Complexity and Algorithms; Database and Data Structures; Computational Complexity; Approximation Algorithms; Cryptography; Network and Algorithms; Graph Theory

and Algorithms; Computational Geometry; Scheduling Algorithms and Circuit Complexity; Computational Geometry and Computational Biology; and Logic, Algebra and Automata.
