Mathematics of Keno and Lotteries Mark Bollman, 2018-04-17 Mathematics of Keno and Lotteries is an elementary treatment of the mathematics, primarily probability and simple combinatorics, involved in lotteries and keno. Keno has a long history as a high-advantage, high-payoff casino game, and state lottery games such as Powerball are mathematically similar. MKL also considers such lottery games as passive tickets, daily number drawings, and specialized games offered around the world. In addition, there is a section on financial mathematics that explains the connection between lump-sum lottery prizes (as with Powerball) and their multi-year annuity options. So-called winning systems for keno and lotteries are examined mathematically and their flaws identified.

The Lottery Book Don Catlin, 2003 This book should be read by everyone who plays the state-run lotteries. Despite the fact that we players all know 'the odds are a million to one' against winning those big jackpots, most of us don't know the nature of these games or the math behind them or, yes, how to

most effectively play them. In this groundbreaking book, you will learn: How to increase your chances of winning a jackpot that doesn't have to be shared with other players; How to tell when a jackpot becomes a 'positive expectation' bet and what that really means; How to keep the long arm of the government from getting its hands on significant portions of your wins; How to figure the odds on the various lotteries and the typical scratch-off tickets; How to find 'positive expectation' scratch-off games during special promotions.

Natural Computing in Computational Finance Anthony Brabazon, Michael O'Neill, 2009-01-30 Recent years have seen the widespread application of Natural Computing algorithms (broadly defined in this context as computer algorithms whose design draws inspiration from phenomena in the natural world) for the purposes of financial modelling and optimisation. A related stream of work has also seen the application of learning mechanisms drawn from Natural Computing algorithms for the purposes of agent-based modelling in finance and economics. In this book we have collected a series of chapters which illustrate these two faces of Natural Computing. The first part of the book illustrates how algorithms inspired by the natural world can be used as problem solvers to uncover and optimise financial models. The second part of the book examines a number agent-based simulations of financial systems. This book follows on from *Natural Computing in Computational Finance* (Volume 100 in Springer's *Studies in Computational Intelligence* series) which in turn arose from the success of *EvoFIN 2007*, the very first European Workshop on Evolutionary Computation in Finance & Economics held in Valencia, Spain in April 2007.

Once Upon A Number John Allen Paulos, 2008-08-04 What two things could be more different than numbers and stories? Numbers are abstract, certain, and

eternal, but to most of us somewhat dry and bloodless. Good stories are full of life: they engage our emotions and have subtlety and nuance, but they lack rigor and the truths they tell are elusive and subject to debate. As ways of understanding the world around us, numbers and stories seem almost completely incompatible. Once Upon a Number shows that stories and numbers aren't as different as you might imagine, and in fact they have surprising and fascinating connections. The concepts of logic and probability both grew out of intuitive ideas about how certain situations would play out. Now, logicians are inventing ways to deal with real world situations by mathematical means -- by acknowledging, for instance, that items that are mathematically interchangeable may not be interchangeable in a story. And complexity theory looks at both number strings and narrative strings in remarkably similar terms. Throughout, renowned author John Paulos mixes numbers and narratives in his own delightful style. Along with lucid accounts of cutting-edge information theory we get hilarious anecdotes and jokes; instructions for running a truly impressive pyramid scam; a freewheeling conversation between Groucho Marx and Bertrand Russell (while they're stuck in an elevator together); explanations of why the statistical evidence against OJ Simpson was overwhelming beyond doubt and how the Unabomber's thinking shows signs of mathematical training; and dozens of other treats. This is another winner from America's favorite mathematician.
