Advanced Information Systems Engineering Anne Banks Pidduck,John Mylopoulos,Carson C. Woo,M.T. Ozsu,2003-08-01 TheexplosivegrowthoftheInternetandtheWebhavecreatedanever-growing demand for information systems, and ever-growing challenges for Information Systems Engineering. The series of Conferences on Advanced Information S- tems Engineering (CAiSE) was

launched in Scandinavia by Janis Bubenko and Arne Solvberg in 1989, became an important European conference, and was held annually in major European sites throughout the 1990s. Now, in its 14th year,CAiSEwasheldforthe?rsttimeoutsideEurope,showcasinginternational researchon information systems and their engineering. Not surprisingly, this year the conference enjoyed unprecedented attention. In total, the conference received 173 paper submissions, the highest number ever for a CAiSE conference. Of those, 42 were accepted as regular papers and 26 as short (poster) papers. In addition, the conference received 12 proposals for workshops of which 8 were approved, while 4 tutorials were selected from 15 submissions. The technical program was put together by an international committee of 81 experts. In total, 505 reviews were submitted, with every member of the committeecontributing.Decisionsonallsubmissionswerereachedataprogram committee meeting in Toronto on January 26-27,2002. Workshop and tutorial proposals were handled separately by committees chaired by Patrick Martin (workshops), and Jarek Gryz and Richard Paige (tutorials). We wish to extend a great "THANK YOU!" to all members of the program and organizing committees for their volunteer contributions of time and exp- tise. The fact that so many busy (and famous!) people took the trouble to help uswiththeorganizationofthisconferenceandtheformationofitstechnicalp- gram speaks well for the future of CAiSE and the ?eld of Information Systems Engineering.

Integrated Assessment of Sustainable Energy Systems in China, The China Energy Technology Program Baldur Eliasson,Yam Yee Lee,2003 There is no progress without access to energy and no energy use without supporting technology. Only one sixth of the earth's population has an easy access to sufficient energy. The other five sixth will increase their demand for energy in the future. The global environmental problems we face will increasingly affect our daily life. Adjust and fair price for energy is necessary for comparing the pros and cons of energy technology application. The road to an objective analysis of an energy system is called Integrated Energy Analysis and covers a cradle-to-grave system approach. This book contains such an analysis of the electricity energy system in Shandong-Province, one of China's 32 Provinces. It also presents a decision support analysis tool. It should allow decision makers in China to choose the right system of electricity supply with minimum environmental impact and/or minimum true cost. The book contains a DVD, which contains a more extensive record of the research results obtained. It also contains all the tools, which have been developed. The methodology presented in this book and DVD is easily applicable to other Provinces in China and also other countries and regions. This research presents a pioneering effort in bringing together the three essential partners for any such research program, Industry, Academia and the Stakeholders, i.e. prospective users of the results. An important aspect of this international program with 75 participants was the leadership provided by a dedicated and professional Program Management Team from Industry. Developing a sustainable energy supply in China is an essential part of a global strategy to promote development while mitigating environmental pollution and the effect of greenhouse gas emissions.
