TCP/IP Tutorial and Technical Overview Lydia Parziale,Dr. Wei Liu,Carolyn Matthews,Nicolas Rosselot,Chuck Davis,Jason Forrester,David T. Britt,IBM Redbooks,2006-12-19 The TCP/IP protocol suite has become the de facto standard for computer communications in today's networked world. The ubiquitous implementation of a specific networking standard has led to an incredible dependence on the applications enabled by it. Today, we use the TCP/IP protocols and the Internet not only for entertainment and information, but to conduct our business by performing transactions, buying and selling products, and delivering services to customers. We are continually extending the set of applications that leverage TCP/IP, thereby driving the need for further infrastructure support. It is our hope that both the novice and the expert will find useful information in this publication.

Indeterminacy in Terminology and LSP Bassey Antia,2007-05-09 This book deals with the oft-neglected tensions between perspicuity and fuzziness in specialised communication. It describes the manifestations, functions and implications of indeterminacy phenomena in a range of LSP specialisations where it has been customary to expect precision and consistency. The volume presents case studies and methodological frameworks that draw on theoretical, anthropological and cognitive linguistics, safety-critical translating, history and theory of terminology studies, development of ontologies, software localisation, jurisprudence, macroeconomics and interoperability of digital knowledge representation resources. With chapters by leading scholars drawn from eleven countries, this book contributes to the benchmarking of indeterminacy scholarship in LSP studies and is a fitting tribute to its dedicatee, Professor Heribert Picht who, even in retirement, remains a constant presence in LSP and terminology studies. The book should be of interest to scholars of the aforementioned areas.

Hello CAD Fans nr 56-61 Constantin STANCESCU, Revista Hello CAD Fans („HCF") a fost publicată în România între anii 1991 și 1999, având o apariție cvasi lunară și fiind distribuită în toată țara. A fost o revistă căutată de toți cei care, imediat după 1989, și-au dorit să afle de undeva cum să lucreze cu PC-ul în proiectare folosind în principal programul AutoCAD de la Autodesk, Inc., din SUA. Chiar dacă acum pare desuetă, în revistă se găsesc numeroase elemente utile pentru cei care lucrează în domeniul CAD. Veți fi surprinși să vedeți cât de multe aspecte interesante pot fi regăsite acolo! În fond, vorbim despre mai mult de 2300 de pagini în 61 de numere publicate de-a lungul a nouă ani... Din intenția de a restrânge prezentarea, dar fără a ajunge la volume prea mari, am grupat cele 61 de numere în 12 volume de câte cinci reviste, cu excepția celui de-al 12-lea, care conține șase reviste. Acest volum este al 12-lea și ultimul, conținând numerele 56-61.

From Statistical Physics to Data-Driven Modelling Simona Cocco,Rémi Monasson,Francesco Zamponi,2022-09-09 The study of most scientific fields now relies on an ever-increasing amount of data, due to instrumental and experimental progress in monitoring and manipulating complex systems made of many microscopic constituents. How can we make sense of such data, and use them to enhance our understanding of biological, physical, and chemical systems? Aimed at graduate students in physics, applied mathematics, and computational biology, the primary objective of this textbook is to introduce the concepts and methods necessary to answer this question at the intersection of probability theory, statistics, optimisation, statistical physics, inference, and machine learning. The second objective of this book is to provide practical applications for these methods, which will allow students to assimilate the underlying ideas and techniques. While readers of this textbook will need basic knowledge in programming (Python or an equivalent language), the main emphasis is not on mathematical rigour, but on the development of intuition and the deep connections with statistical physics.

Algorithms and Software for Predictive and Perceptual Modeling of Speech Venkatraman Atti,2022-05-31 From the early pulse code modulation-based coders to some of the recent multi-rate wideband speech coding standards, the area of speech coding made several significant strides with an objective to attain high quality of speech at the lowest possible bit rate. This book presents some of the recent advances in linear prediction (LP)-based speech analysis that employ perceptual models for narrow- and wide-band speech coding. The LP analysis-synthesis framework has been successful for speech coding because it fits well the source-system paradigm for speech synthesis. Limitations associated with the conventional LP have been studied extensively, and several extensions to LP-based analysis-synthesis have been proposed, e.g., the discrete all-pole modeling, the perceptual LP, the warped LP, the LP with modified filter structures, the IIR-based pure LP, all-pole modeling using the weighted-sum of LSP polynomials, the LP for low frequency emphasis, and the cascade-form LP. These extensions can be classified as algorithms that either attempt to improve the LP spectral envelope fitting performance or embed perceptual models in the LP. The first half of the book reviews some of the recent developments in predictive modeling of speech with the help of MatlabTM Simulation examples. Advantages of integrating perceptual models in low bit rate speech coding depend on the accuracy of these models to mimic the human performance and, more importantly, on the achievable coding gains and computational overhead associated with these physiological models. Methods that exploit the masking properties of the human ear in speech coding standards, even today, are largely based on concepts introduced by Schroeder and Atal in 1979. For example, a simple approach employed in speech coding standards is to use a perceptual weighting filter to shape the quantization noise according to the masking properties of the human ear. The second half of the book reviews some of the recent developments in perceptual modeling of speech (e.g., masking threshold, psychoacoustic models, auditory excitation pattern, and loudness) with the help of MatlabTM simulations. Supplementary material including MatlabTM programs and simulation examples presented in this book can also be accessed here. Soft Computing Evaluation Logic Jozo Dujmović,2018-09-10 A novel approach to decision engineering, with a verified framework for modeling human reasoning Soft Computing Evaluation Logic provides an in-depth examination of evaluation decision problems and presents comprehensive guidance toward the use of the Logic Scoring of Preference (LSP) method in modeling complex decision criteria. Fully aligned with current developments in computational intelligence, the discussion covers the design and use of LSP criteria for evaluation and comparison in diverse areas, such as search engines, medical conditions, real estate, space management, habitat mitigation projects in ecology, and land use and residential development suitability maps, with versatile transfer to other similar decision-modeling contexts. Human decision making is rife with fuzziness, imprecision, uncertainty, and half-truths—yet humans make evaluation decisions every day. In this book, such decision processes are observed, analyzed, and modeled. The result is graded logic, a soft computing mathematical infrastructure that provides both formal logic and semantic generalizations of classical Boolean logic. Graded logic is used for logic aggregation in the context of evaluation models consistent with observable properties of human reasoning. The LSP method, based on graded logic and logic aggregation, is a vital component of an industrial-strength decision engineering framework. Thus, the book: Provides detailed theoretical background for graded logic Provides a theory of logic aggregators Explains the LSP method for designing complex evaluation criteria and their use Shows techniques for evaluation, comparison, and selection of complex systems, as well as the cost/suitability analysis, optimization, sensitivity analysis, tradeoff analysis, and missingness-tolerant aggregation Includes a survey of available LSP software tools, including ISEE, ANSY and LSP.NT. With quantitative modeling of human reasoning, novel approaches to modeling decision criteria, and a verified decision engineering framework applicable to a broad array of applications, this book is an invaluable resource for graduate students, researchers, and practitioners working within the decision engineering realm.
