The Confucian Cycle William A. Taylor, Kenneth R. Taylor, 2015-09 2,500 years ago, the Chinese sage,

Confucius, observed that all governments follow a cycle: from unity, through prosperity to stagnation, then to collapse and anarchy. He taught that when government officials sought personal power or wealth instead of taking care of the people, society lost the Mandate of Heaven and fell apart. By Mandate of Heaven, Confucius meant that God Himself had directed how society should work. Chinese history shows 15 or 20 collapses when government lost virtue and the country broke apart in civil war, but whenever the Chinese followed Confucius' rules, Chinese society worked well. From his day to ours, civilizations all over the world have followed the same cycle Confucius observed. Today's United States is well into the stagnation phase and many observers predict a collapse. But America has an advantage Confucius never imagined. Unlike the Chinese, America's voters have the power to replace their rulers and reform their government without armed revolution. The Taylors' wide-ranging tour through history, culture, and modern news sheds new light on how the past both predicts the future and can be used to alter it for the better. About William Taylor - William Taylor's parents were American missionaries to Japan right after the Second World War. The Japanese had learned the secrets of civilization from the Chinese, so Confucian ideas were thick on the ground. Until he entered MIT in 1963, Mr. Taylor watched the Japanese use Confucian virtue to bootstrap themselves to first-world status. There were no Japanese cars on American roads in 1963 and next to no cars on Japanese roads. Cars move faster than bicycles; he was hit by cars 3 times his first year at MIT. After studying computer technology at MIT and graduating before computer science had been invented, Mr. Taylor worked for truly monster societies such as the US Navy, General Motors, Ford, and Chrysler; middle-sized business cultures such as IBM, the

New York Times, the First National Bank of Chicago, NASA, and the MIT Draper Lab; and tiny startups you've never heard of. About Kenneth Taylor - Growing up with well-educated parents of wide-ranging, eclectic experience and interests, Kenneth Taylor was exposed from an early age to a variety of cultural touchstones. With his father working in the world of tech startups, he had a ringside seat to watch many of the principles discussed in this book illustrated in living and sometimes garish color. Working for a Japanese tech company in the mid-1990s presented a unique view of modern Confucian management. At the time, most Japanese employers were very large, very old, or both. The Japanese had recovered from the destruction of WW II by learning from other countries. Having caught up with the West, they now had to discover new ideas on their own to keep their economy growing. Mr. Taylor's employer had founded by a Japanese graduate of Tokyo University who'd been sent through MIT by a monstrous Japanese conglomerate. They expected him to work for them until he died so that they could recover their investment in his education; instead he founded a startup like so many in America at the time. Exploring 3D Adrian Pennington, Carolyn Giardina, 2013
Stereographers, who represent the key new role on set liaising between director and cinematographer, believe it is a key part of their job to inform and inspire directors and producers about the potential of 3D stereo. In Exploring 3D leading directors, editors, and cinematographers of 3D film and TV production argue persuasively that 3D techniques should become a staple visual storytelling tool on a par with lighting, set design, or sound. They share their views on how this evolving set of technologies and filmmaking

techniques are used to create a new aesthetic and language for visual storytelling. Highlights include interviews and images from *How to Train Your Dragon*, *Coraline*, *Hugo*, and *The Great Gatsby*.

A.I. Apocalypse William Hertling, 2014-04-09 Leon Tsarev is a high school student set on getting into a great college program, until his uncle, a member of the Russian mob, coerces him into developing a new computer virus for the mob's botnet - the slave army of computers they used to commit digital crimes. The evolutionary virus Leon creates, based on biological principles, is successful -- too successful. All the world's computers are infected. Everything from cars to payment systems and, of course, computers and smart phones stop functioning, and with them go essential functions including emergency services, transportation, and the food supply. Billions may die. But evolution never stops. The virus continues to evolve, developing intelligence, communication, and finally an entire civilization. Some may be friendly to humans, but others are not. Leon and his companions must race against time and the military to find a way to either befriend or eliminate the virus race and restore the world's computer infrastructure. Praise for the Singularity Series: "Highly entertaining, gripping, thought inspiring. Don't start without the time to finish — it won't let you go." —Gifford Pinchot III, founder Bainbridge Graduate Institute, author *THE INTELLIGENT ORGANIZATION* "A tremendous book that every single person needs to read. In the vein of Daniel Suarez's *Daemon* and *Freedom(TM)*, William shows that science fiction is becoming science fact." —Brad Feld, managing director Foundry Group, cofounder TechStars "A fascinating look at how simple and benign advancements in technology could lead to the surprise arrival of the first AI. And like all good techno-thrillers, the reality of AI is less

than ideal.” —Jason Glaspey, SILICON FLORIST “An alarming and jaw-dropping tale about how something as innocuous as email can subvert an entire organization. I found myself reading with a sense of awe, and read it way too late into the night.” —Gene Kim, author of VISIBLE OPS

Everyday Chaos David Weinberger, 2019-04-23 Make. More. Future. Artificial intelligence, big data, modern science, and the internet are all revealing a fundamental truth: The world is vastly more complex and unpredictable than we've allowed ourselves to see. Now that technology is enabling us to take advantage of all the chaos it's revealing, our understanding of how things happen is changing--and with it our deepest strategies for predicting, preparing for, and managing our world. This affects everything, from how we approach our everyday lives to how we make moral decisions and how we run our businesses. Take machine learning, which makes better predictions about weather,

medical diagnoses, and product performance than we do--but often does so at the expense of our understanding of how it arrived at those predictions. While this can be dangerous, accepting it is also liberating, for it enables us to harness the complexity of an immense amount of data around us. We are also turning to strategies that avoid anticipating the future altogether, such as A/B testing, Minimum Viable Products, open platforms, and user-modifiable video games. We even take for granted that a simple hashtag can organize unplanned, leaderless movements such as #MeToo. Through stories from history, business, and technology, philosopher and technologist David Weinberger finds the unifying truths lying below the surface of the tools we take for granted--and a future in which our best strategy often requires holding back from anticipating and instead creating as many possibilities as we can. The book's imperative for business and beyond is simple: Make. More. Future. The result is a world no longer focused on limitations but optimized for possibilities.

Nefarious Nature Thurston Howl, 2020-08-09

Evolving Ourselves Juan Enriquez, Steve

Gullans, 2016-11-15 An eye-opening, mind-bending exploration of how mankind is reshaping its genetic future, based on the viral TED Talk series “Will Our Kids Be a Different Species?” and “The Next Species of Human.” Are you willing to engineer the DNA of your unborn children and grand-children to be healthier? Better looking? More intelligent? Why are rates of autism, asthma, and allergies exploding at an unprecedented pace? Why are humans living longer and having far fewer kids? Futurist Juan Enriquez and scientist Steve Gullans conduct a sweeping tour of how humans are changing the course of evolution for all species—sometimes intentionally, sometimes not. For example: • What if life forms are limited only by the bounds of our imagination? Are designer babies and pets, de-extinction, even entirely newspecies fair game? • As humans, animals, and plants become ever more resistant to disease and aging, what will become the leading causes of death? • Man-machine interfaces may allow humans to live much longer. What will happen when we transfer parts of our “selves” into clones, into stored cells and machines? Though these harbingers of change are deeply unsettling, the authors argue we are also in an epoch of tremendous opportunity. Future humans, perhaps a more diverse, resilient, gentler, and intelligent species, may become better caretakers of the planet—but only if we make the right choices now. Intelligent, provocative, and optimistic, *Evolving Ourselves* is the ultimate guide to the next phase of life on Earth. Chosen by *Nature* magazine as a Fall 2016 season highlight.
