Research Anthology on Ecosystem Conservation and Preserving Biodiversity Management Association, Information Resources, 2022-04-08 In today's rapidly evolving world, it has never been more critical to consider key environmental issues such as climate change, pollution, and endangered species. Society faces an unknown future where the fate of the environment is continuously in flux based on current preservation initiatives that governments develop. In order to ensure the world is protected moving forward, further study on the importance of securing environments, ecosystems, and species is necessary to successfully implement change. The Research Anthology on

Ecosystem Conservation and Preserving Biodiversity considers the best practices and strategies for protecting our current ecosystems as well as the potential ramifications of failing to implement policies. Society is at a crossroads where if we continue to ignore the danger and warning signs brought about by environmental issues, we will be unable to maintain a healthy environment. Covering essential topics such as extinction, climate change, and pollution, this major reference work is ideal for scientists, industry professionals, researchers, academicians, policymakers, scholars, practitioners, instructors, and students.

Herbicides ,2021-06-23 **Herbicides: Chemistry, Efficacy, Toxicology, and Environmental Impacts** addresses contemporary debates on herbicide toxicology. The reader is offered a comprehensive overview of this complex topic, presented by internationally recognized experts. Information presented will inform discussions on the use of herbicides in modern agricultural and other systems, and their potential non-target effects on human populations and various ecosystems. The book covers these matters in concise language appropriate to engage both specialists in the research community and informed persons responsible for legislative, funding, and public health matters in the community at

large. The use of herbicides is an essential pillar of modern agricultural production systems. Weeds, if uncontrolled, would reduce crop yield and result in massive economic damage. Recently, the heavy reliance on single herbicides has been linked to the development of weed resistance. To combat resistant weeds, farmers are advised to use a mix of several herbicides and to increase herbicide application rates. As a result, the toxicity of herbicides on human health and the environment has become a controversial topic. Offers a comprehensive overview of herbicide science in modern agricultural systems Addresses the complex problems that can arise from herbicide use and misuse, including weed resistance, pollution, and human health issues Uses recent examples to demonstrate the topical nature of this issue

Where Science and Ethics Meet Chris Willmott, Salvador Macip, 2016-06-13 Through engaging case studies and clear explanations of the underlying science, this book makes the social impacts and ethical consequences of recent advances in biomedicine understandable for general readers. Recent biomedical discoveries promise considerable improvement in the quality of human life, but they also hold the potential to permanently alter society. Are the anticipated benefits worth the price we would have

to pay for them? In *Where Science and Ethics Meet: Dilemmas at the Frontiers of Medicine and Biology*, a biochemist and a biomedical researcher who are highly experienced in explaining ethics for lay audiences present the most innovative advances in biomedicine and enable readers to develop their own opinions about the ethical and social consequences these technologies will bring. Each controversial topic in modern medicine and ethics is introduced through a hypothetical case study that highlights thorny ethical issues before explaining the key aspects of the science and technology involved and addressing the associated ethical considerations in detail. The interdisciplinary treatment of the topics makes the book relevant to students of science, medicine, ethics, law, and sociology as well as health care professionals.

Jaume Copons, Salvador Macip, Tony Hernandez, Elena Rottier, 2020-09-07
Hi! My name is Alex Pianola. Since the coronavirus lockdown began, I've been stuck at home with ten monsters and my parents. Gradually, I've realized that everyone else is in the same situation and we all I have to learn to do everyday things differently. I am eager to go outside, but thanks to the monsters and my friend Lidia, I've learned more about the virus and the whole point of the lockdown. We have to be responsible.

We have to support our healthcare system, research and science, but we also need to take care of the planet and of each other, because we are all in the same boat. This special digital edition guide helps young readers learn to live with the coronavirus and play their part in stopping it from spreading. It encourages children to calmly reflect on what they are experiencing and teaches them how to cope with the anxiety that changes in routine can create. The International status of education about the Holocaust
Carrier, Peter, Fuchs, Eckhardt, Messinger, Torben, Georg Eckert
Institute for International Textbook Research (Germany), 2015-01-14
How do schools worldwide treat the Holocaust as a subject? In
which countries does the Holocaust form part of classroom
teaching? Are representations of the Holocaust always accurate,
balanced and unprejudiced in curricula and textbooks? This study,
carried out by UNESCO and the Georg Eckert Institute for
International Textbook Research, compares for the first time
representations of the Holocaust in school textbooks and national
curricula. Drawing on data which includes countries in which there
exists no or little information about representations of the
Holocaust, the study shows where the Holocaust is established in
official guidelines, and contains a close textbook study, focusing on
the comprehensiveness and accuracy of representations and
historical narratives. The book highlights evolving practices
worldwide and thus provides education stakeholders with
comprehensive documentation about current trends in curricula
directives and textbook representations of the Holocaust. It further
formulates recommendations that will help policy-makers provide

the educational means by which pupils may develop Holocaust literacy.

Senolytics in Disease, Ageing and Longevity Daniel Muñoz-Espin, Marco Demaria, 2020-04-27 This book offers comprehensive information on the new and rapidly evolving science of identifying and targeting senescent cells, and on the exciting prospect of new diagnostic and therapeutic opportunities for stopping, and even reversing, the progression of disease and the deterioration of the human body due to ageing. According to recent United Nations data, by 2050 one in six people worldwide will be older than age 65, with peaks rising to one in four people in Europe and North America. Remarkably, the number of persons aged 80 years or older is expected to triple, from 143 million in 2019 to 426 million in 2050. First documented in the 1960s, the concept of cellular senescence as an underlying cause of ageing has been established in the course of the last decade. Using genetically engineered mouse models, researchers have demonstrated that the selective elimination of senescent cells can block and even reverse a number of age-related dysfunctions and pathologies, promoting both better health and longer life in the elderly. These include cardiovascular diseases; neurological disorders; type 1 and type 2 diabetes; inflammatory diseases; fibrosis; geriatric

syndromes; chronic diseases resulting in organ dysfunction; the integrity of the musculoskeletal system; and cancer. Some senolytic agents have already progressed into trials. These include UBX0101 for the treatment of osteoarthritis (now in phase II), a cocktail of dasatinib and quercetin for the management of idiopathic pulmonary fibrosis and chronic kidney disease, and ABT-263 in combination with senescence-inducing chemotherapies for the treatment of advanced solid tumours. In addition, the book discusses pathways to early phase clinical trials and translational approaches in medicine and ageing, highlighting new opportunities as well as current limitations, challenges and alternatives. Given its scope, it will benefit a broad audience of advanced educators, researchers, graduate students and practitioners.

Normally, we don't even realize they're there, but from time to time one of these microscopic creatures becomes powerful enough to turn everything upside down. What are these invisible enemies, and how can we prepare ourselves for the pandemics of the future? A specialist in the cellular biology of diseases, Salvador Macip explains, in a language everyone can understand, what it means to share the planet with millions of microbes – some wonderful allies, others terrible foes. He provides a concise account of epidemics that changed history, and focuses on the great modern plagues that are still causing millions of deaths every year, from influenza, TB and malaria to COVID-19.
