The Cinema in Flux Lenny Lipton,2021-04-07 The first of its kind, this book traces the evolution of motion picture technology in its entirety. Beginning with Huygens' magic lantern and ending in the current electronic era, it explains cinema's scientific foundations and the development of parallel enabling technologies alongside the lives of the innovators. Product development issues, business and marketplace factors, the interaction of aesthetic and technological demands, and the patent system all play key roles in the tale. The topics are covered sequentially, with detailed discussion of the transition from the magic lantern to Edison's invention of the 35mm camera, the development of the celluloid cinema, and the transition from celluloid to digital. Unique and essential reading from a lifetime innovator in the field of cinema technology, this engaging and well-illustrated book will appeal to anyone interested in the history and science of cinema, from movie buffs to academics and members of the motion picture industry.

Face William A. Ewing,Nathalie Herschdorfer,2006 The first full-scale study of the face in contemporary photography: a challenge to accepted notions of what constitutes a portrait. In this groundbreaking publication, William A. Ewing announces the death of the conventional portrait. In an age when we are bombarded with flawless images of youthful beauty, when rejuvenation is available through a jar of cream or a scalpel, artists and photographers seek to portray the face in new ways. Through a variety of techniques, including computer manipulation, photomontage, and retouching, the artists present their new portraits. They replace clarity with blur, the split-second with the elastic moment, reality with hyperreality, questioning the notion of a fixed identity, of universality of expression, of what constitutes beauty. Whether Cindy Sherman's disquieting disguises, Gillian Wearing's masked self-portrait, LawickMüller's composite portraits of couples, Thomas Ruff's studiously neutral facade, or Orlan's disturbing

experiments with cosmetic surgery, these faces demand attention. Other artists represented in the book include Inez van Lamsweerde and Vinoodh Matadin, Martin Parr, Philip-Lorca diCorcia, Rineke Dijkstra, Lee Friedlander, Barbara Kruger, and Tibor Kalman. 250+ photographs in color and duotone.\

Dance's Duet with the Camera Telory D. Arendell,Ruth Barnes,2016-06-24 Dance's Duet with the Camera: Motion Pictures is a collection of essays written by various authors on the relationship between live dance and film. Chapters cover a range of topics that explore dance film, contemporary dance with film on stage, dance as an ideal medium to be captured by 3D images and videodance as kin to site-specific choreography. This book explores the ways in which early practitioners such as Loïe Fuller and Maya Deren began a conversation between media that has continued to evolve and yet still retains certain unanswered questions. Methodology for this conversation includes dance historical approaches as well as mechanical considerations. The camera is a partner, a disembodied portion of self that looks in order to reflect on, to mirror, or to presage movement. This conversation includes issues of sexuality, race, and mixed ability. Bodies and lenses share equal billing.
