Magic Light and the Dynamic Landscape Jeanine Leech, 2014-07-15 Moments of peak action are well-known in sports photography, but they also happen in nature photography. The light can change within seconds and the best light may occur only long enough for a single frame. To create dramatic images, landscape photographers must first recognize those moments of magic light that get the heart pumping and blood flowing. While the sunrise and sunset hours provide recognized opportunities, the keen photographer will soon see that magic light can also happen at other times of the day. (Have you ever noticed how dramatic the sky can be before or after storm? Or seen a shaft of light shimmering through a snow squall over the mountain ridge?) After identifying the light, capturing the moment requires fast action; often, you need to set up fast and shoot within seconds to get the shot. At every phase of the process, from finding magic light throughout the day to making best use of it when you do, this book arms you with the skills you need to succeed—and use magic light to transform everyday landscapes into ethereal visions.

Destroyer Dan Champagne, 2019-02-20 Volume III, Book I of the Abaddon Trilogy. The vampire war continues, having spilled out into the streets. And the authorities have taken notice. The Night Reapers get captured. So Laiel Brockade is called back from his long vacation on a boat. His return is not well received, but then again, his ex-friends did ask him back. For a rescue mission. Which isn't such a good fit for a guy like Laiel. On top of that, the war against the vampires is also a war amongst them, and that front is being handled by Bess, the daughter of Dracula, and her immortal lover, the assassin, Cupideau. Expect body bags and ample property damage before it's all over... pretty much a regular end to the week for Laiel and his pals. Digital Black & White Landscape Photography ,2015-07-20 Landscape photography is a popular photographic genre—and for good reason. The great outdoors is an ever-ready subject. It is variable, as well; it is affected by changing light, decomposition, weather, human interaction, and myriad other factors. Its features range from natural to manmade elements—and many landscapes are comprised of both. Photographers who point their camera's lens at a scene do so in an effort to communicate their feelings about the landscape. Rather than simply document the scene, they seek to capture the spirit of place—perhaps to tell a story or depict a mood. They aim to share with viewers the ways in which the scene speaks to them. Accomplishing these goals may seem simple at the outset, but the task is rife with challenges. In this book, Gary Wagner shows readers how to create powerful, evocative black & white landscape photographs filled with beautiful light, a full range of tones, and exquisite detail. Beginning with a look at the gear you'll need to get the best-possible images, Wagner covers cameras, lens types, tripods, and filters. He then discusses the postproduction processes he uses to enhance his images, producing breathtaking photographic records of natural and man-altered locales.

Nature and Landscape Photography Michael Freeman,2004 Packed with more than 400 photographs, technical tips, and personal insights, this inspirational

guide helps outdoor photographers make the most of their digital camera. With a concentration on the different techniques required by the digital format, each page explains how to create professional quality photos of all the popular subjects: urban and rural photography, street portraits, architecture, and more. Manage such challenges as excessively bright skies and find out how to take full advantage of nature's beauties, such as the warm golden light found at daybreak and dusk. Expert information reveals how to enhance the image by using filters such as grads and polarizers, along with computer and image-editing software. There's added advice on composition, framing, and setting the scene.

The Art of Black and White Photography Torsten Andreas Hoffmann, 2012-01-14
Over the last few years, most books on photography have been focused on the new breed of cameras and how to master the digital imaging workflow. In *The Art of Black and White Photography* author and photographer Torsten Andreas Hoffmann takes a different approach, focusing on image composition and image capture, with an emphasis on the creative aspects of black and white photography rather than on the digital workflow. After introducing the ground rules of composition, Hoffmann illustrates their applications with his own stunning black and white images that cover various photographic genres, including architecture, street photography, portraiture, and surreal photography. Also discussed are the elements of a photographic language', which distinguishes creative photography from random shooting. Finally, you

will learn valuable post-processing techniques, mostly using Photoshop, that emphasize the functions necessary for creating outstanding black and white images. This second edition has been updated to include Photoshop CS5, as well as brand new images, content, and a revised layout.

Views Across the Landscape Peter Watson, 2014-03-17 Using a fabulous collection of landscape photography, Peter Watson's latest book gives you both the inspiration and knowledge you need to take stunning digital photographs. The core of the book deals with light, composition, close-ups and locations by showcasing striking images and then offering comprehensive and entertaining explanations on all aspects of producing them, including screenshots of the Photoshop adjustments made.

Disinformation Guide to Ancient Aliens, Lost Civilizations, Astonishing Archaeology & Hidden History Preston Peet, 2013-01-01 If you think the history you were taught in school was accurate, you're in for a big surprise. This group of researchers blows the lid off everything you thought you knew about the origins of the human race and the culture we live in--Cover p. [4].

The Art, Science, and Craft of Great Landscape Photography Glenn Randall, 2015-03-16 The Art, Science, and Craft of Great Landscape Photography teaches photographers how to convert their visual peak experiences--moments of extraordinary natural beauty that evoke a sense of wonder and awe--into stunning images that elicit the same awestruck emotion in their viewers. Randall is an experienced wilderness photographer, and whether you want to

venture into the mountains for once-in-a-lifetime shots of raw nature, or simply hone your landscape photography skills from the safety of your back deck, Randall explains the art, science and craft of creating astounding images. Randall begins by focusing on the art of landscape photography. He describes his three-step process for composing a photograph and shows how good composition is an organic process that begins with rules but ultimately transcends them. Randall then explores the science behind successful landscape photographs, which requires understanding key concepts from geography, optics, vision, and psychology. These concepts include: Understanding how the position of the sun at sunrise and sunset varies throughout the year, which will help you plan when and where to shoot. Understanding optics to predict where rainbows will appear, how polarizers will interact with reflections, and where to find spectacular light. Understanding how to use topographic maps and computerized mapping tools to help you find the most promising shooting locations in the wilderness. Understanding how our visual system analyzes images and the psychology of how we view art. These insights will help you produce successful photographs. Exposure is a central aspect of the craft of landscape photography, and Randall tackles the challenges of this topic from every angle—from tips on calculating exposures in the field, to achieving correct exposure in high-contrast lighting situations, to the best digital darkroom techniques. Great landscape photography can be mastered with practice and by applying the

techniques taught in this book. The Art, Science, and Craft of Great Landscape Photography is intended for those who already understand the basics of photography and who are ready to master the finer nuances of creating magnificent landscape photographs. Foreword by Reid Callanan Director, Santa Fe Photographic Workshops

Transdisciplinary Challenges in Landscape Ecology and Restoration Ecology - An Anthology Zev Naveh, 2007-06-06 Capitalizing on forty years of intensive ecological studies, this anthology presents a collection of widely dispersed major publications on theoretical and practical Mediterranean, global environmental and landscape issues. Each chapter features a comprehensive study of ecological and landscape issues, synthesized in the introduction, and woven with autobiographical experiences. The concluding chapter calls for a transdisciplinary shift in all environmental scientific fields and particularly in landscape and restoration ecology, to cope with the complex, closely interwoven ecological, socio-economical, political and cultural crises facing human society during the present crucial transition from the industrial to the post-industrial, global information age. Updating and broadening the scope of the groundbreaking Springer book on Landscape Theory and Applications by the author and Lieberman (1994), this is a unique transdisciplinary attempt based on advanced systems complexity theories, which link the natural and human sciences.

Human-Centred Software Engineering Regina Bernhaupt, Peter Forbrig, Jan

Gulliksen, Marta Kristín Lárusdóttir, 2010-10-06 The conference series HCSE (Human-Centred Software Engineering) was established four years ago in Salamanca. HCSE 2010 is the third working conference of IFIP Working Group 13.2, Methodologies for User-Centered Systems Design. The goal of HCSE is to bring together researchers and practitioners interested in strengthening the scientific foundations of user interface design, examining the relationship between software engineering and human-computer interaction and focusing on how to strengthen user-centered design as an essential part of software engineering processes. As a working conference, substantial time was devoted to the open and lively discussion of papers. The interest in the conference was positive in terms of submissions and participation. We received 42 contributions that resulted in 10 long papers, 5 short papers and 3 poster papers. The selection was carried out carefully by the International Program Committee. The result is a set of interesting and stimulating papers that address such important issues as contextual design, user-aware systems, ubiquitous environments and usability evaluation. The final program of the conference included a keynote by Liam Bannon with the title "Approaches to Software Engineering: A Human-Centred Perspective." This talk raised a lot of interesting questions for IFIP WG 13.2 and might have had some impact for participants to become a member of the working group. We hope that participants considered HCSE 2010 as successful as its two predecessors in terms of interesting discussions and new ideas for scientific co-operation.

Getting Started with Digital Imaging Joe Farace, 2007 A full-color tutorial takes amateur photographers through each stage in the digital workflow from image capture to output, combining helpful examples and tips as it describes the tools of digital imaging and shows how these tools function in different software packages (including Photoshop, Elements, and Paint Shop Pro) and offers advice on selecting the right digital camera, setting up a digital darkroom, and preparing images for output on the Web. Digital Drawing for Landscape Architecture Bradley Cantrell, Wes Michaels, 2010-03-11 Digital Drawing for Landscape Architecture won the “Award of Excellence” from the 2012 Professional Awards and Student Awards by the American Society of Landscape Architects (ASLA). For a hundred years, pencil, pen, markers, and watercolor have been the principal tools of representation for landscape architects and urban planners. Today, those hand-powered aids have been replaced by computers and Computer-aided design (CAD). Digital Drawing for Landscape Architects bridges the gap between the traditional analog and the new digital tools and shows you how to apply timeless concepts of representation to enhance your design work in digital media. Building on the tried-and-true principles of analog representation, Digital Drawing for Landscape Architecture explores specific techniques for creating landscape design digitally. It explains the similarities and differences between analog and digital rendering, and then walks you through the steps of creating digitally rendered plans, perspectives, and diagrams. You’ll explore:

Computing Basics Raster and vector images Setting up the document Base imagery and scaling Hand-drawn linework and diagrams Text, leaders, and page layout Color, shading, and textures Creating a section elevation Perspective drawing Techniques for using the newest versions of Adobe Illustrator, Photoshop, and Acrobat as well as older versions With more than 500 full-color drawings and photographs alongside proven techniques, *Digital Drawing for Landscape Architects* will help you enhance your skills through a unique marriage of contemporary methods with traditional rendering techniques.

Magic Realism, World Cinema, and the Avant-Garde Felicity Gee, 2021-04-19 This book follows the hybrid and contradictory history of magic realism through the writings of three key figures – art historian Franz Roh, novelist Alejo Carpentier, and cultural critic Fredric Jameson – drawing links between their political, aesthetic, and philosophical ideas on art's relationship to reality. Magic realism is vast in scope, spanning almost a century, and is often confused with neighbouring styles of literature or art, most notably surrealism. The fascinating conditions of modernist Europe are complex and contradictory, a spirit that magic realism has taken on as it travels far and wide. The filmmakers and writers in this book acknowledge the importance of feeling, atmosphere, and mood to subtly provoke and resist global capitalism. This is the history of magic-realist cinema. The book explores this history through the modernist avant-garde in search of a new theory of cinematic magic realism. It uncovers a resistant, geopolitical form of world cinema –

moving from Europe, through Latin America and the former Soviet Union, to Thailand – that emerges from these ideas. This book is invaluable to any reader interested in world modernism(s) in relation to contemporary cinema and geopolitics. Its sustained analysis of film as a sensory, intermedial medium is of interest to scholars working across the visual arts, literature, critical theory, and film-philosophy.
