Engineering and Managing Software Requirements Aybüke Aurum, Claes Wohlin, 2006-04-07 Requirements engineering is the process by which the requirements for software systems are gathered, analyzed, documented, and managed throughout their complete lifecycle. Traditionally it has been concerned with technical goals for, functions of, and constraints on software systems. Aurum and Wohlin, however, argue that it is no longer appropriate for software systems professionals to focus only on functional and non-functional aspects of the intended system and to somehow assume that organizational context and needs are outside their remit. Instead, they call for a broader perspective in order to gain a better understanding of the interdependencies between enterprise stakeholders, processes, and software systems, which would in turn give rise to more appropriate techniques and higher-quality systems. Following an introductory chapter that provides an exploration of key issues in requirements engineering, the book is organized in three parts. Part 1 presents surveys of state-of-the-art requirements engineering process research along with critical assessments of existing models, frameworks and techniques. Part 2 addresses key areas in requirements engineering, such as market-driven requirements engineering, goal modeling, requirements ambiguity, and others. Part 3 concludes the book with articles that present empirical evidence and experiences from practices in industrial projects. Its broader perspective gives this book its distinct appeal and makes it of interest to both researchers and practitioners, not only in software engineering but also in other disciplines such as business process engineering and management science.

Information Systems Project Management David Avison, Gholamreza Torkzadeh, 2008-08-22 View IS project management as an art as well as a science. . . . There are a number of books out there on project management. What is different and specific about this book? There is a balance between socio-cultural and technical aspects and there is a balance between qualitative and quantitative aspects – project management is seen as both an art and a science. It provides an information systems orientation for project management: neither information technology oriented on the one side nor production and operations oriented on the other, but of application to both within an organizational-wide view. It stresses information systems as a whole, not just software development – no project is successful if only software aspects are considered. It gives a truly international view of the domain – examples and experiences from different parts of the world add richness as well as context to the material. Globalization has ensured that most projects take on an international dimension. The book provides a coherent explanation of the concerns of the project manager as the project develops through the project life cycle – it does not follow a 'kitchen sink approach'. Each chapter has the following consistent structure: introduction and outline, an exhibit, the main text with examples, chapter summary, exercises, discussion questions, interview with project manager and appendix – this structure provides coherence and consistency. The exhibit, interview and appendix contain real-world examples, experiences, case studies, discussion material, software descriptions and professional codes – these provide material for class discussion and group work. The material has been used on our courses in the United States, Europe and Australia, given to practitioners as well as students (both undergraduate and postgraduate) – it has been well tested as part of our own project management. The material in this text has been proven successful through repeated use in courses in the United States, Europe, and Australia, by practitioners as well as undergraduate and postgraduate students. Intended Audience This core text is designed for advanced undergraduate and graduate courses such as Management Information Systems, Computer Information Systems, Information Systems, and Decision and Information Systems in the departments of information systems, information technology, and business.
