*The New Map of Empire* S. Max Edelson, 2017-04-24 In 1763 British America stretched from Hudson Bay to the Keys, from the Atlantic to the Mississippi. Using maps that Britain created to control its new lands, Max Edelson pictures the contested geography of the British Atlantic world and offers new explanations of the causes and consequences of Britain's imperial ambitions before the Revolution.

**Mapping It Out** Mark Monmonier, 2015-07-27 Writers know only too well how long it can take—and how awkward it can be—to describe spatial relationships with words alone. And while a map might not always be worth a thousand words, a good one can help writers communicate an argument or explanation clearly, succinctly, and effectively. In his acclaimed *How to Lie with Maps*, Mark Monmonier showed how maps can distort facts. In *Mapping it Out: Expository Cartography for the Humanities and Social Sciences*, he shows authors and scholars how they can use expository cartography—the visual, two-dimensional organization of information—to heighten the impact of their books and articles. This concise, practical book is an introduction to the fundamental principles of graphic logic and design, from the basics of scale to the complex mapping of movement or change. Monmonier helps writers and researchers decide when maps are most useful and what formats work best in a wide range of subject areas, from literary criticism to sociology. He demonstrates, for example, various techniques for representing changes and patterns; different typefaces and how they can either clarify or confuse information; and the effectiveness of less traditional map forms, such as visibility base maps, frame-rectangle symbols, and complementary scatterplot designs for conveying complex spatial relationships. There is also a wealth of practical information on map compilation, cartobibliographies, copyright and permissions, facsimile reproduction, and the evaluation of source materials. Appendixes discuss the benefits and limitations of electronic graphics and pen-and-ink drafting, and how to work with a cartographic illustrator. Clearly written, and filled with real-world examples, *Mapping it Out* demystifies mapmaking for anyone writing in the humanities and social sciences. A useful guide to a subject most people probably take too much for granted. It shows how map makers translate abstract data into eye-catching cartograms, as they are called. It combats cartographic illiteracy. It fights cartophobia. It may even teach you to find your way.—Christopher Lehmann-Haupt, *The New York Times*

**How to Lie with Maps** Mark Monmonier, 2018-04-13 An updated edition of the “humorous, informative and perceptive” guide to how maps can lead us astray (*Toronto Globe and Mail*). An instant classic when first published in 1991, *How to Lie with Maps* revealed how the choices mapmakers make—consciously or unconsciously—mean that every map inevitably presents only one of many possible stories about the places it depicts. The principles Mark Monmonier outlined back then remain true today, despite significant technological changes in the making and use of maps. The introduction and spread of digital maps and mapping software, however, have added new wrinkles to the ever-evolving landscape of modern mapmaking. Fully updated for the digital age, this new edition of *How to Lie with Maps* examines the myriad ways that technology offers new opportunities for cartographic mischief, deception, and propaganda. While retaining the same brevity, range, and humor as its predecessors, this third edition includes significant updates throughout as well as new chapters on image maps, prohibitive cartography, and online maps. It also includes an expanded section of color images and an updated list of sources for further reading. Praise for previous editions of *How to Lie with Maps* “Will leave you much better defended against cheap atlases, shoddy journalism, unscrupulous advertisers, predatory special-interest groups, and others who may use or abuse maps at your expense.” —*Christian Science Monitor*

*Adventures in Academic Cartography* Mark Monmonier, 2014-11-30 *Adventures in Academic Cartography* is a personal memoir offering insight to the diverse impacts of computer technology on the world of cartography and mapping. It surveys the author's half century of work as a scholar, educator, and editor as well as his commitment to demystifying for general readers the power of maps as a tool for understanding and persuasion. An overview of his undergraduate and graduate training and early university employment precedes engaging accounts of his experiences as a classroom teacher; academic researcher, book author, journal editor, consultant, and editor of *Cartography in the Twentieth Century* (Volume Six of the monumental *History of Cartography*). Additional chapters reveal his views on theory, map collecting, and writing. This integrated collection of stories promotes an understanding of the many facets of academic cartography, which emerged in the twentieth century as a distinct mapping endeavor that touches geographic education, technological innovation, national defense, public policy, professional organizations, libraries, map collections, and academic and trade publishing. Mark Monmonier pursued a vigorous

career in cartographic scholarship, with faculty appointments at the University of Rhode Island, the State University of New York at Albany, and Syracuse University, where he was appointed associate professor in 1973 and promoted to professor in 1979 and distinguished professor in 1998. Electronic strategies for map design and analysis dominated his research through the mid-1990s. He published the first general textbook on computer-aided mapping and made innovative contributions to interactive statistical graphics. An early invention now known as the Monmonier Algorithm became an important research tool for geographic studies in linguistics and genetics. An emerging curiosity about the intersection of mapping and public policy led to *Technological Transition in Cartography* (1985) and *Spying with Maps* (2002), and a growing interest in origins inspired focused histories like *Air Apparent: How Meteorologists Learned to Map, Predict, and Dramatize Weather* (1999) and *Rhumb Lines and Map Wars: A Social History of the Mercator Projection* (2004). Recognition includes an Association of American Geographers Media Achievement Award (2000), the American Geographical Society's O. M. Miller Medal (2001), and the German Cartographic Society's Mercator Medal (2009). He continues an active life of scholarship, currently focused on patented cartographic inventions.

Making Maps, Second Edition John Krygier, Denis Wood, 2011-04-15 Acclaimed for its innovative use of visual material, this book is engaging, clear, and compelling—exactly how an effective map should be. Nearly every page is organized around maps and other figures (many in full color) that illustrate all aspects of map making, including instructive examples of both good and poor design choices. The book covers everything from locating and processing data to making decisions about layout, symbols, color, and type. Readers are invited to think critically about both the technical features and social significance of maps as they learn to create better maps of their own. New to This Edition\*Extensively revised and expanded core chapters on map design.\*An annotated map design exemplar is used to show how the concepts in each chapter play out on an actual map.\*Updated to reflect current technological developments.\*Larger size and redesigned pages make the book even more user friendly.

*New Lines* Matthew W. Wilson, 2017-11-15 *New Lines* takes the pulse of a society increasingly drawn to the power of the digital map, examining the conceptual and technical developments of the field of geographic information science as this work is refracted through a pervasive digital culture. Matthew W. Wilson draws together archival research on the birth of the digital map with a reconsideration of the critical turn in mapping and cartographic thought. Seeking to bridge a foundational divide within the discipline of geography—between cultural and human geographers and practitioners of Geographic Information Systems (GIS)—Wilson suggests that GIS practitioners may operate within a critical vacuum and may not fully contend with their placement within broader networks, the politics of mapping, the rise of the digital humanities, the activist possibilities of appropriating GIS technologies, and more. Employing the concept of the drawn and traced line, Wilson treads the theoretical terrain of Deleuze, Guattari, and Gunnar Olsson while grounding their thoughts with the hybrid impulse of the more-than-human thought of Donna Haraway. What results is a series of interventions—fractures in the lines directing everyday life—that provide the reader with an opportunity to consider the renewed urgency of forceful geographic representation. These five fractures are criticality, digitality, movement, attention, and quantification. *New Lines* examines their traces to find their potential and their necessity in the face of our frenetic digital life.

*Piri Reis Map of 1513* Gregory C. McIntosh,2012-03-15 One of the most beautiful maps to survive the Great Age of Discoveries, the 1513 world map drawn by Ottoman admiral Piri Reis is also one of the most mysterious. Gregory McIntosh has uncovered new evidence in the map that shows it to be among the most important ever made. This detailed study offers new commentary and explication of a major milestone in cartography. Correcting earlier work of Paul Kahle and pointing out the traps that have caught subsequent scholars, McIntosh disproves the dubious conclusion that the Reis map embodied Columbus's Third Voyage map of 1498, showing that it draws instead on the Second Voyage of 1493-1496. He also refutes the popular misinterpretation that Reis's depictions of Antarctica are evidence of either ancient civilizations or extraterrestrial visitation. McIntosh brings together all that has been previously known about the map and also assembles for the first time the translations of all inscriptions on the map and analyzes all place-names given for New World and Atlantic islands. His work clarifies long-standing mysteries and opens up new ways of looking at the history of exploration.
