GIS Cartography Gretchen N. Peterson, 2020-11-24 Since the publication of the bestselling second edition 5 years ago, vast and new globally-relevant geographic datasets have become available to cartography practitioners, and with this has come the need for new ways to visualize them in maps as well as new challenges in ethically disseminating the visualizations. With new features and significant updates that address these changes, this edition remains faithful to the original vision that cartography instruction should be software agnostic. Discussing map design theory and technique rather than map design tools, this book focuses on digital cartography and its best practices. This third edition has completely new sections on how to deal with maps that go viral and the ethics therein; new presentation ideas; new features such as amenities, climate data, and hazards; the new Equal Earth projection; and vector tile design considerations. All chapters are thoroughly updated with new illustrations and new sections for datasets that didn't exist when the second edition was published, as well as new techniques and trends in cartography. New in the third edition: A true textbook, written with a friendly style and excellent examples explaining everything from layout design to fonts and colors, to specific design considerations for individual feature types, to static and dynamic cartography issues. Thoroughly updated with new features such as points of interest, climate data, hazards, and buildings; new projections such as the Equal Earth projection and the Spilhaus projection; and vector tile design considerations such as label placement techniques and tricks for making world-class basemaps. Includes over 70 new map examples that display the latest techniques in cartography. Reflects on new developments in color palettes; visualization patterns; datums; and non-static output media such as animation, interaction, and large-format cinematic techniques, that weren't available for the second edition. Defines and illustrates new terms that have made their way into the profession over the last few years such as story maps, flow maps, Dorling cartograms, spec sheets, bivariate choropleths, firefly cartography, Tanaka contours, and value-by-alpha. In this third edition, author Gretchen Peterson takes a don't let the technology get in the way approach to the presentation, focusing on the elements of good design, what makes a good map, and how to get there, rather than specific software tools. She provides a reference that you can thumb through time and again as you create your maps. Copiously illustrated, the third edition explores novel concepts that kick-start your pursuit of map-making excellence. The book doesn't just teach you how to design and create good maps, it teaches you how to design and create superior maps.

The Map Reader Martin Dodge, Rob Kitchin, Chris Perkins, WINNER OF THE CANTEMIR PRIZE 2012 awarded by the Berendel Foundation The Map Reader brings together, for the first time, classic and hard-to-find articles on mapping. This book provides a wide-ranging and coherent edited compendium of key scholarly writing about the changing nature of cartography over the last half century. The editorial selection of fifty-four theoretical and thought provoking texts demonstrates how cartography works as a powerful representational form and explores how different mapping practices have been conceptualised in particular scholarly contexts.

GIS Cartography Gretchen N. Peterson, 2014-05-23 In the five years since the publication of the first edition of *A Guide to Effective Map Design*, cartography and software have become further intertwined. However, the initial motivation for publishing the first edition is still valid: many GISers enter the field without so much as one hour of design instruction in their formal education. Yet they are then tasked with creating one of the most effective, easily recognized communication tools: a map. The Negro Motorist Green Book Victor H. Green, The idea of The Green Book is to give the Motorist and Tourist a Guide not only of the Hotels and Tourist Homes in all of the large cities, but other classifications that will be found useful wherever he may be. Also facts and information that the Negro Motorist can use and depend upon. There are thousands of places that the public doesn't know about and aren't listed. Perhaps you know of some? If so send in their names and addresses and the kind of business, so that we might pass it along to the rest of your fellow Motorists. You will find it handy on your travels, whether at home or in some other state, and is up to date. Each year we are compiling new lists as some of these places move, or go out of business and new business places are started giving added employment to members of our race.

Mapping It Out Mark Monmonier, 2015-07-27 Writers know only too well how long it can take—and how awkward it can be—to describe spatial relationships with words alone. And while a map might not always be worth a thousand words, a good one can help writers communicate an argument or explanation clearly, succinctly, and effectively. In his acclaimed *How to Lie with Maps*, Mark Monmonier showed how maps can distort facts. In *Mapping it Out: Expository Cartography for the Humanities and Social Sciences*, he shows authors and scholars how they can use expository cartography—the visual, two-dimensional organization of information—to heighten the impact of their books and articles. This concise, practical book is an introduction to the fundamental principles of graphic logic and design, from the basics of scale to the complex mapping of movement or change. Monmonier helps writers and researchers decide when maps are most useful and what formats work best in a wide range of subject areas, from literary criticism to sociology. He demonstrates, for example, various techniques for representing changes and patterns; different typefaces and how they can either clarify or confuse information; and the effectiveness of less traditional map forms, such as visibility base maps, frame-rectangle symbols, and complementary scatterplot designs for conveying complex spatial relationships. There is also a wealth of practical information on map compilation, cartobibliographies, copyright and permissions, facsimile reproduction, and the evaluation of source materials. Appendixes discuss the benefits and limitations of electronic graphics and pen-and-ink drafting, and how to work with a cartographic illustrator. Clearly written, and filled with real-world examples, *Mapping it Out* demystifies mapmaking for anyone writing in the humanities and social sciences. A useful guide to a subject most people probably take too much for granted. It shows how map makers translate abstract data into eye-catching cartograms, as they are called. It combats cartographic illiteracy. It fights cartophobia. It may even teach you to find your way.—Christopher Lehmann-Haupt, *The New York Times*

How Maps Change Things Ward L. Kaiser, 2012-02-29 March 5th 2012 marks the 500th birthday of map-maker Gerhard Kremer, aka Mercator. There are many wishing the Flemish map maker well!

From blogs to books the man who has shaped for many our world view is celebrated as often as vilified. Four centuries later, Arno Peters created what many see as a fair view of our world, but others see as a distorted or misleading map! Across the centuries it is maps that link these men and their impact on current human activity. This landmark book - *How Maps Change Things: A Conversation About the Maps We Choose and the World We Want* - looks at maps by these two men and others. This examination goes beyond maps as nouns, as tactile objects that show locations and distances. Maps are verbs ... don't be fooled we are told at the outset of *How Maps Change Things*. The book examines maps as change agents, reflecting intentions and setting agendas, stating who has what, and who has not. What are the messages sent by maps? What were Mercator, Peters and other map makers setting out to do with each of their creations? Ward Kaiser, author, publisher, pastor, and historian was instrumental in bringing the Peters Equal Area Map to North America. He has been leading the discussion of what maps mean and the power of maps in framing human activities. In *How Maps Change Things* Kaiser takes a passionate view of how maps illustrate and influence the significant paths humans pursue. Rather than looking for definitive answers, Kaiser focuses on asking thought-provoking questions. What does our world, through the view of maps, really look like and what does the perspective (or frame of reference or bias) of the viewer mean to the map and its view? Are all maps simply propaganda for the hidden agenda of the map-maker? What is the world we get and what is the world we want ... and who cares and why? Kaiser has stimulated an impressive and important conversation.

Seeing Through Maps Ward L. Kaiser, Denis Wood, 2001 Synopsis: Maps become a means of seeing the world from many perspectives in this appealing guide, which is aimed at training readers to look at images with a critical eye. The authors (a social scientist and a pastor/community organizer) challenge readers to stretch their intellectual boundaries while they wrap their minds around demonstrations of the many ways of making maps and the truth that no way is the right one. A final chapter provides a guide to using map projections in human resource development and adult

education. It's a smart book but not a beautiful one-many of the illustrations went muddy in the transfer from color to b&w, and seven unlovely pages of the publisher's advertising precede the index. Wide format: 11x8.5.

How to Lie with Maps Mark Monmonier,2014-12-10 Originally published to wide acclaim, this lively, cleverly illustrated essay on the use and abuse of maps teaches us how to evaluate maps critically and promotes a healthy skepticism about these easy-to-manipulate models of reality. Monmonier shows that, despite their immense value, maps lie. In fact, they must. The second edition is updated with the addition of two new chapters, 10 color plates, and a new foreword by renowned geographer H. J. de Blij. One new chapter examines the role of national interest and cultural values in national mapping organizations, including the United States Geological Survey, while the other explores the new breed of multimedia, computer-based maps. To show how maps distort, Monmonier introduces basic principles of mapmaking, gives entertaining examples of the misuse of maps in situations from zoning disputes to census reports, and covers all the typical kinds of distortions from deliberate oversimplifications to the misleading use of color. Professor Monmonier himself knows how to gain our attention; it is not in fact the lies in maps but their truth, if always approximate and incomplete, that he wants us to admire and use, even to draw for ourselves on the facile screen. His is an artful and funny book, which like any good map, packs plenty in little space.—Scientific American A useful guide to a subject most people probably take too much for granted. It shows how map makers translate abstract data into eye-catching cartograms, as they are called. It combats cartographic illiteracy. It fights cartophobia. It may even teach you to find your way. For that alone, it seems worthwhile.—Christopher Lehmann-Haupt, *The New York Times* . . . witty examination of how and why maps lie. [The book] conveys an important message about how statistics of any kind can be manipulated. But it also communicates much of the challenge, aesthetic appeal, and sheer fun of maps. Even those who hated geography in grammar school might well find a new enthusiasm for the subject after reading Monmonier's lively and surprising book.—Wilson Library Bulletin A reading of this book will leave you much better defended against cheap atlases, shoddy journalism, unscrupulous advertisers, predatory special-interest groups, and others who may use or abuse maps at your expense.—John Van Pelt, *Christian Science Monitor* Monmonier meets his goal admirably. . . . [His] book should be put on every map user's 'must read' list. It is informative and readable . . . a big step forward in helping us to understand how maps can mislead their readers.—Jeffrey S. Murray, *Canadian Geographic*

Maps and the Internet M.P. Peterson,2003-10-24 This book examines a new trend affecting cartography and geographic information science. Presenting the work of over 30 authors from 16 different countries, the book provides an overview of current research in the new area of Internet Cartography. Chapters deal with the growth of this form of map distribution, uses in education, privacy issues, and technical aspects from the point of view of the map provider - including Internet protocols such as XML and SVG. Many see the Internet as a revolution for cartography. Previously tied to the medium of paper and expensive large-format color print technology, maps had a limited distribution and use. The Internet made it possible to not only distribute maps to a much larger audience but also to incorporate interaction and animation in the display. Maps have also become timelier with some maps of traffic and weather being updated every few minutes. In addition, it is now possible to access maps from servers throughout the world. Finally, the Internet has made historic maps available for viewing to the public that were previously only available in map libraries with limited access.
