Some Effects of Paraformaldehyde on Wood Surrounding Tapholes in Sugar Maple Trees Alex L. Shigo,Frederick M. Laing,1970 S2Pills of paraformaldehyde (trioxymethylene) are commonly used in tapholes in sugar maple trees (*Acer saccharum* Marsh.) to increase the yield of sap collected for making syrup and sugar (2, 4, 5, 8). The explanation offered for this increase in sap yield is that microorganisms in the tapholes (7) cause premature decline and stoppage of the sap flow (1, 6), but that paraformaldehyde increases sap yield by inhibiting their growth (2). But what happens to the tree? To determine the effects of paraformaldehyde on the tissues surrounding tapholes, and on the microorganisms in those tissues, sugar maple trees were dissected and studied. This paper is a report on that study.S3.

Maple's Theory of Fun Kate McMillan,Ruthie Prillaman,2024-03-05 Perfect for fans of Dork Diaries and Emmie & Friends, this first book in a diary-style illustrated middle grade series follows an anxious, science-minded sixth grader determined to become fun and win back her friend. Sixth grade has been pretty disaster-free for aspiring astronaut Maple McNutt—which is impressive, given the number of worries and possible catastrophes that run through her head every day. (So far, Earth hasn't been devoured by a black hole and a cockroach hasn't crawled out of her toothpaste mid-squeeze. Phew!) But then her best friend of seven-point-two years, Sunny Gwon, accuses her of being unfun and starts hanging around with a new group of friends. In order to win Sunny back, Maple decides to undergo a serious scientific transformation to become fun by 1. Doing extensive research, 2. Applying research to self, and and 3. Repeating until fun. It's risky and groundbreaking research, but Maple has no choice if she wants to save her friendship.
