Java Enterprise Design Patterns Mark Grand, 2002-07-04 A how-to guide for Java programmers who want to use design patterns when developing real-world enterprise applications. This practical book explores the subject of design patterns, or patterns that occur in the design phase of a project's life cycle. With an emphasis on Java for the enterprise, Mark Grand guides Java programmers on how to apply traditional and new patterns when designing a large enterprise application. The author clearly explains how existing patterns work with the new enterprise design patterns and demonstrates through case studies how to use design patterns in the real world. Features include over 50 design patterns, each mapped out by UML, plus an overview of UML 1.4 and how it fits in with the different phases of a project's life cycle.

Distributed Computing and Networking Vijay Garg, Roger Wattenhofer, Kishore Kothapalli, 2009-03-26 People volunteer their time and energy and work in a dedicated fashion to pull everything together each year, including our very supportive Steering Committee members led by Sukumar Ghosh. However, the success of ICDCN is mainly due to the hard work of all those people who submit papers and/or attend the conference. We thank you all. January 2009 Prasad Jayanti Andrew T. Campbell Message from the Technical Program Chairs Welcome to the proceedings of the 10th International Conference on Distributed Computing and Networking (ICDCN) 2009. As ICDCN celebrates its 10th anniversary, it has become an important forum for disseminating the latest research results in distributed computing and networking. We received 179 submissions from all over the world, including Algeria, Australia, Canada, China, Egypt, France, Germany, Hong Kong, Iran, Italy, Japan, Malaysia, The Netherlands, Poland, Singapore, South Korea, Taiwan, and the USA, besides India, the host country. The submissions were read and evaluated by the Program Committee, which consisted of 25 members for the Distributed Computing Track and 28 members for the Networking Track, with the additional help of external reviewers. The Program Committee selected 20 regular papers and 32 short papers for inclusion in the proceedings and presentation at the conference. We were fortunate to have several distinguished scientists as keynote speakers. Andrew Campbell (Dartmouth College, USA), Maurice Herlihy (Brown University, USA), and P. R. Kumar (University of Illinois, Urbana-Champaign) delivered the keynote address. Krithi Ramamritham from IIT Bombay, India, delivered the A. K. Choudhury Memorial talk.

Distributed Database Management Systems Saeed K. Rahimi, Frank S. Haug, 2015-02-13 This book addresses issues related to managing data across a distributed database system. It is unique because it covers traditional database theory and current research, explaining the difficulties in providing a unified user interface and global data dictionary. The book gives implementers guidance on hiding discrepancies across systems and creating the illusion of a single repository for users. It also includes three sample frameworks—implemented using J2SE with JMS, J2EE, and Microsoft .Net—that readers can use to learn how to implement a distributed database management system. IT and development groups and computer sciences/software engineering graduates will find this guide invaluable.

Introduction to Reliable and Secure Distributed Programming Christian Cachin, Rachid Guerraoui, Luís Rodrigues, 2011-02-11 In modern computing a program is usually distributed among several processes. The fundamental challenge when developing reliable and secure distributed programs is to support the cooperation of processes required to execute a common task, even when some of these processes fail. Failures may range from crashes to

adversarial attacks by malicious processes. Cachin, Guerraoui, and Rodrigues present an introductory description of fundamental distributed programming abstractions together with algorithms to implement them in distributed systems, where processes are subject to crashes and malicious attacks. The authors follow an incremental approach by first introducing basic abstractions in simple distributed environments, before moving to more sophisticated abstractions and more challenging environments. Each core chapter is devoted to one topic, covering reliable broadcast, shared memory, consensus, and extensions of consensus. For every topic, many exercises and their solutions enhance the understanding This book represents the second edition of Introduction to Reliable Distributed Programming. Its scope has been extended to include security against malicious actions by non-cooperating processes. This important domain has become widely known under the name Byzantine fault-tolerance.

Translation Studies Mary Snell-Hornby,1988-01-01 Translation Studies presents an integrated concept based on the theory and practice of translation. The author adapts linguistic approaches and methods in such a way that they may be usefully employed in the theory, practice, and analysis of literary translation. The author develops a more cultural approach through text analysis and cross-cultural communication studies. The book is a contribution to the development of translation studies as a discipline in its own right.
