Conference on Materials for Improved Fire Safety ,1971 Leaders in an impressive variety of industries and Government agencies were briefed for two days in May 1970 at the Manned Spacecraft Center near Houston on studies of combustion, tests of materials, and methods of curbing fires. The research and development work described was done as part of the National Aeronautics and Space Administration's Apollo program to land men on the Moon. The hazards were extraordinary, and both new procedures and new materials were developed to protect the astronauts in the spacecraft. This Special Publication was compiled from technical papers prepared for that Conference on Materials for Improved Fire Safety.--Preface.

Immunoregulatory Mechanisms of Interferon Jorg Hermann Fritz, Claudia U. Duerr, 2020-03-11 Interferons (IFN) belong to the family of cytokines and have been described first in the late 1950s as an inhibitory factor of viral replication. Since then, the impact of interferon has been greatly expanded and its function comprises a role not only in different types of infection, cancer and autoimmunity but importantly also in immune homeostasis. IFN have important anti-viral effects but it is becoming more and more evident that they are true immunomodulators and have an important impact on the development and maintenance of innate and adaptive immunity.

Enhancing the Regulatory Decision-Making Approval Process for Direct Food Ingredient Technologies Institute of Medicine,Food Forum,1999-04-29 The Institute of Medicine's (IOM's) Food Forum was established in 1993 to allow science and technology leaders in the food industry, top administrators in the federal government, representatives from consumer interest groups, and academicians to discuss and debate food and food safety issues openly and in a neutral setting. The Forum provides a mechanism for these diverse groups to identify possible approaches for addressing food and food safety problems and issues surrounding the often complex interactions among industry, academia,

regulatory agencies, and consumers. On May 6-7, 1997, the Forum convened a workshop titled Enhancing the Regulatory Decision-Making Process for Direct Food Ingredient Technologies. Workshop speakers and participants discussed legal aspects of the direct food additive approval process, changes in science and technology, and opportunities for reform. Two background papers, which can be found in Appendix A and B, were shared with the participants prior to the workshop. The first paper provided a description and history of the legal framework of the food ingredient approval process and the second paper focused on changes in science and technology practices with emphasis placed on lessons learned from case studies. This document presents a summary of the workshop.
