Journey to the Center of Mars Robert Wilton Dale,2006-01-11 This, the first part of an adventure to surpass all adventures, takes you to the near, possible, future, to the far edges of hope and mankind's dreams. Why are we here and what are we to this vast universe that embraces us so tightly. An attempt to realize this is the bulk of this work. We begin with the near future of space commerce. We will seek material value in space, of course. We have and certainly will find great wonderment as we explore this new wilderness left to us by chance or divinity? This is the question we, secretly, seek most. Out past Mars, in the asteroid belt that encircles our sun, a scab mining ship picks out an asteroid to dig for what valuables it may contain. This orbiting mountain of rock is, as it turns out, a very exceptional find. Our mining crew of seven set out for normal operations, but normal is not to be. They are being watched by a hostile group of strict union bonded spacers looking to pirate our barely virtuous heroes. War between the factions involved, is but a minuscule mistake away, as always and the find made by the scab crew will change mankind's space capabilities forever. Join the adventure and experience the real hazards that humankind will endeavor to take possession of our new and open wilderness.

Hybrid Intelligent Systems Ajith Abraham,Tzung-Pei Hong,Ketan Kotecha,Kun Ma,Pooja Manghirmalani Mishra,Niketa Gandhi,2023-05-24 This book highlights the recent research on hybrid intelligent systems and their various practical applications. It presents 97 selected papers from the 22nd International Conference on Hybrid Intelligent Systems (HIS 2022) and 26 papers from the 18th International Conference on Information Assurance and Security, which was held online, from 13 to 15 December 2022. A premier conference in the field of artificial intelligence and machine learning applications, HIS-IAS 2022, brought together researchers, engineers and practitioners whose work involves intelligent systems, network security and their applications in industry. Including contributions by authors from over 35 countries, the book offers a valuable reference guide for all researchers, students and practitioners in the fields of Computer Science and Engineering.

Rough Sets, Fuzzy Sets, Data Mining and Granular Computing Hiroshi Sakai,Mihir Chakraborty,Aboul-Ella Hassanien,Dominik Slezak,William Zhu,2009-12-15 This book constitutes the refereed proceedings of the 12th International Conference on Rough Sets, Fuzzy Sets, Data Mining, and Granular Computing, RSFDGrC 2009, held in Delhi, India in December 2009 in conjunction with the Third International Conference on Pattern Recognition and Machine Intelligence, PReMI 2009. RSFDGrC 2009 is the core component of a broader Rough Set Year in India initiative, RSIndia09. The 56 revised full papers presented together with 6 invited papers and a report on the Rough Set Year in India 2009 project were carefully reviewed and selected from a total of 130 submissions. The papers are organized in topical sections on foundations of rough sets and beyond; rough set algorithms and applications; fuzzy set foundations and applications; data mining and knowledge discovery; clustering and current trends in computing; and information retrieval and text mining.

MARS Applications in Geotechnical Engineering Systems Wengang Zhang,2019-04-30 This book presents the application of a comparatively simple nonparametric regression algorithm, known as the multivariate adaptive regression splines (MARS) surrogate model, which can be used to approximate the relationship between the inputs and outputs, and express that relationship mathematically. The book first describes the MARS algorithm, then highlights a number of geotechnical applications with multivariate big data sets to explore the approach's generalization capabilities and accuracy. As such, it offers a valuable resource for all geotechnical researchers, engineers, and general readers interested in big data analysis.

Mining the Oort Frederik Pohl,1992 On Earth finishing his training to become an Oort Cloud ice miner, Dekker DeWoe uncovers a high-power interplanetary cover-up and conspiracy that might squash the Oort Cloud project and destroy Tokyo.

Intergalactic Travel and Asteroid Mining Daniel Mikelsten, Asteroid mining is the exploitation of raw materials from asteroids and other minor planets, including near-Earth objects. Based on known terrestrial reserves, and growing consumption in both developed and developing countries, key elements needed for modern industry and food production could be exhausted on Earth within 50 to 60 years. In response, it has been suggested that platinum, cobalt and other valuable elements from asteroids may be mined and sent to Earth for profit, used to build solar-power satellites and space habitats, and water processed from ice to refuel orbiting propellant depots. Looking beyond the Milky Way, there are at least 2 trillion other galaxies in the observable universe. Space colonization can roughly be said to be possible when the necessary methods of space colonization become cheap enough to meet the cumulative funds that have been gathered for the purpose, in addition to estimated profits from commercial use of space. Intergalactic travel would either have to involve voyages lasting millions of years, or a possible faster than light propulsion method based on speculative physics, such as the Alcubierre drive. There are, however, no scientific reasons for stating that intergalactic travel is impossible in principle. Uploaded human minds or AI may be transmitted to other galaxies in the hope some intelligence there would receive and activate them.

The Next Space Race Richard M. Harrison,Peter A. Garretson,2023-03-31 If China's space ambitions continue unchallenged, America will be seriously economically and militarily disadvantaged. This book provides a comprehensive strategy to secure U.S. primacy in the space domain. From Moon landings to plans for asteroid mining, China is beginning to exploit space to achieve its great power ambitions. Its strategy could, over time, severely and adversely impact U.S. economic and military security. The United States needs to structure its approach to space to ensure that it can meet or surpass PRC timelines. Authors Richard M. Harrison and Peter A. Garretson, both from the American Foreign Policy Council, review the literature on Chinese space ambitions and assess U.S. space-related initiatives across the government, military, and private sector to understand the maturity of technology available to support space initiatives. Their first-hand research and findings are supplemented by interviews with industry experts, corporate space leaders, and government and military officials. The Next Space Race describes and seeks to influence the development of American space policy to ensure the U.S. industrial base is ready to meet or surpass PRC milestones, empower and clarify the mission of the newly minted Space Force, provide guidance to NASA and other federal agencies, and incentivize private sector companies to contribute to ensuring American space primacy.

Practical Text Mining and Statistical Analysis for Non-structured Text Data Applications Gary Miner,2012-01-11 The world contains an unimaginably vast amount of digital information which is getting ever vaster ever more rapidly. This makes it possible to do many things that previously could not be done: spot business trends, prevent diseases, combat crime and so on. Managed well, the textual data can be used to unlock new sources of economic value, provide fresh insights into science and hold governments to account. As the Internet expands and our natural capacity to process the unstructured text that it contains diminishes, the value of text mining for information retrieval and search will increase

dramatically. This comprehensive professional reference brings together all the information, tools and methods a professional will need to efficiently use text mining applications and statistical analysis. The Handbook of Practical Text Mining and Statistical Analysis for Non-structured Text Data Applications presents a comprehensive how- to reference that shows the user how to conduct text mining and statistically analyze results. In addition to providing an in-depth examination of core text mining and link detection tools, methods and operations, the book examines advanced preprocessing techniques, knowledge representation considerations, and visualization approaches. Finally, the book explores current real-world, mission-critical applications of text mining and link detection using real world example tutorials in such varied fields as corporate, finance, business intelligence, genomics research, and counterterrorism activities--
