On To Mars! Vladimir PLETZER, 2017-11-27 This book introduces the Martian simulations of The Mars Society, the first one installed on Devon Island, an uninhabited island in the Canadian Arctic, well within the polar circle, and the second in the desert of Utah, several hundreds of kilometers South of Salt Lake City. The book is based on the diaries held during the simulations, by Vladimir Pletzer, a physicist-engineer, who was selected to participate in these simulations. It relates the details of everyday life in these Martian habitats and of the scientific and exploratory work conducted in these extreme environments in preparation for future manned missions to Mars. Through the real experiences described in the book, readers will find space explorations and living on Mars more tangible.

Once Upon a Time I Lived on Mars Kate Greene, 2020-07-14 When it comes to Mars, the focus is often on how to get there: the rockets, the engines, the fuel. But upon arrival, what will it actually be like? In 2013, Kate Greene moved to Mars. That is, along with five fellow crew members, she embarked on NASA's first HI-SEAS mission, a simulated Martian environment located on the slopes of Mauna Loa in Hawai'i. For four months she lived, worked, and slept in an isolated geodesic dome, conducting a sleep study on her crew mates and gaining incredible insight into human behavior in tight quarters, as well as the nature of boredom, dreams, and isolation that arise amidst the promise of scientific progress and glory. In *Once Upon a Time I Lived on Mars*, Greene draws on her experience to contemplate humanity's broader impulse to explore. The result is a twined story of space and life, of the standard, able-bodied astronaut and Greene's brother's disability, of the lag time of interplanetary correspondences and the challenges of a long-distance marriage, of freeze-dried egg powder and fresh pineapple, of departure and return. By asking what kind of wisdom humanity might

take to Mars and elsewhere in the Universe, Greene has written a remarkable, wide-ranging examination of our time in space right now, as a pre-Mars species, poised on the edge, readying for launch.

The Mars Project Wernher Von Braun, 1953 This classic on space travel was first published in 1953, when interplanetary space flight was considered science fiction by most of those who considered it at all. Here the German-born scientist Wernher von Braun detailed what he believed were the problems and possibilities inherent in a projected expedition to Mars. Today von Braun is recognized as the person most responsible for laying the groundwork for public acceptance of America's space program. When President Bush directed NASA in 1989 to prepare plans for an orbiting space station, lunar research bases, and human exploration of Mars, he was largely echoing what von Braun proposed in *The Mars Project*.

Mars Close to Home Gerald Driggers, 2015-04-24 This brief book is a call to common sense on issues of import for centuries to come. Politics have dictated the position NASA takes on almost every issue. The position of the Administration and the funding from the Congress have dictated decisions and actions that no good engineer could arrive at. It is time for a change. The author is a retired scientist and engineer with strong credentials and a heartfelt desire to see NASA step up to addressing the gravity issues, something that they have refused to do for 45 years. Drugs and exercise are not the answer for a three year trip to Mars.

Fundamentals of Real-Time Distributed Simulation John Nicol, 2011-08 This is the book that the simulation industry is missing! This is an introduction and reference for Real-Time Distributed Simulation. Distributed Simulation is the term describing connecting people, equipment and simulators together in a synthetic environment. If you are involved with any type of simulator and

want to connect it to another system, then you need to have this book. The book describes terrain in simulation, 3-D model structure, Simulator Qualification Levels, Distributed Interactive Simulation (DIS), High Level Architecture (HLA), Validation, Verification and Accreditation (VV&A) as well as providing a methodology and process for planning and implementing a Distributed Simulation project. The book also provides an invaluable Distributed Simulation Agreements Template. This is a very useful book for anyone involved with distributed simulation and was written by someone that has spent nearly 20 years in the industry: building simulators and connecting them to other simulators.

Mars One Erik Seedhouse, 2016-10-21 This book dissects the hype and hubris of the Mars One venture. Every aspect of the mission design is scrutinized, from the haphazard selection process to the unproven mission architecture. A controversial project, many professional astronauts consider Mars One a reckless attempt, yet it gained popular attention. This go-to reference guide provides the reader with insights into the myriad issues arising from the project's loss of funding, loss of sponsorship, loss of TV rights. It explains what contributed to an overly optimistic assessment of Mars One's mission-specific technology, and what captivated the public and the many willing candidates despite these flaws. From the author of *Survival and Sacrifice in Mars Exploration* (2015) among many more books on spacefaring, this is yet another up-to-the-minute account of an emerging player in the private space market from an expert on the subject.

The Mars Project Johnny Conkin, 2000 Evaluation of the risk of decompression sickness (DCS) since a significant proportion of a trinary breathing gas in the habitat might contain Ar. Draws on past experience and published information to extrapolate into untested, multivariable conditions to evaluate risk.

Complex Networks and Their Applications VII Luca Maria Aiello, Chantal Cherifi, Hocine

Cherifi,Renaud Lambiotte,Pietro Lió,Luis M. Rocha,2018-12-05 This book highlights cutting-edge research in the field of network science, offering scientists, researchers, students and practitioners a unique update on the latest advances in theory, together with a wealth of applications. It presents the peer-reviewed proceedings of the VII International Conference on Complex Networks and their Applications (COMPLEX NETWORKS 2018), which was held in Cambridge on December 11-13, 2018. The carefully selected papers cover a wide range of theoretical topics such as network models and measures; community structure and network dynamics; diffusion, epidemics and spreading processes; and resilience and control; as well as all the main network applications, including social and political networks; networks in finance and economics; biological and neuroscience networks; and technological networks.

Mars on Earth Robert Zubrin,2004 The dramatic story of a band of space pioneers, who simulated a mission to the Red Planet in the most desolate regions on Earth. Here is the incredible true story of a group of determined space voyagers who wouldn't wait for the space program to catch up with them. From 1999 to 2002, the stalwarts of the Mars Society undertook a virtual exploration of Mars in the most isolated spots on Earth, where they replicated and studied the real-life challenges of exploring the Red Planet.

Mars One: Humanity's Next Great Adventure Norbert Kraft,James R Kass,2016-02-23 Human curiosity has led us to explore our solar system, landing on the moon and sending spacecraft to study distant planetary objects. The next step in our great adventure is putting humans on Mars, but what will it really take to achieve this? In 2011, Mars One announced its intentions to establish a permanent human settlement on Mars beginning as early as 2024; in 2013 it launched its astronaut-selection program and received thousands of applications. The highly anticipated Mars One

documentary series will provide a window into the captivating details of the crew selection and training process, allowing the whole world to follow along as Mars' first settlers prepare for their mission. Now, with *Mars One: Humanity's Next Great Adventure*, you can step even further inside the experience of these astronaut pioneers and explore the various human dimensions of Mars One's planned expeditions. Edited by Norbert Kraft, MD, Mars One's Chief Medical Officer and head of crew selection and training, as well as crew selection and training committee members James R. Kass, PhD, and Raye Kass, PhD, this collection of essays from scientists, psychologists, and more provides a behind-the-scenes look at the process and criteria used to choose candidates, fascinating details about what they'll learn, and predictions about their future lives on Mars. Inside, you'll find in-depth discussions of: The essential skills and training the Mars One astronauts will need to journey to and then survive on Mars, from technical and medical know-how to the interpersonal skills necessary for working in confined quarters so far from home The challenges of going through the selection and training process while being watched by millions around the world, and what Mars One hopes watching the process will mean for viewers at home Inside information, including images, on the planned Mars One habitats and colonization timeline What settlers can expect on Mars, from daily work activities in a hostile environment to communication with Earth and options for leisure time The book also includes excerpts from candidate questionnaires, allowing readers to enter the minds of prospective Martians like never before.

Behavioral Health and Human Interactions in Space Nick Kanas, 2023-02-02 This textbook covers the range of psychological and interpersonal issues that can affect astronauts living and working in space. It deals with the three major risk areas cited by NASA's Behavioral Health and Performance Element: Behavioral Medicine, Team Risk, and Sleep Risk. Based on the author's more

than 50 years of experience in space-related activities writing, conducting research, and teaching undergraduate and graduate courses, the book follows a comprehensive range of topics that include: cognitive effects; psychiatric issues; cultural influences; salutogenic and positive aspects of space travel; autonomy and delayed communication; current plans to return to the Moon and Mars; analysis of study environments such as the polar regions, submersible habitats, and space simulation facilities; and more. It draws on research, literature, and case studies from the 1950s onward, showing readers in a natural and accessible way how the field has progressed over time. The book contains ample end-of-chapter summaries and exercises as well as a complete glossary of key terms. As such, it will serve students taking courses in aerospace psychology, psychiatry, sociology, human factors, medicine, and related social sciences, in addition to space industry professionals and others interested in the complexities of people living and working in space.

Humans in Space Nick Kanas, 2015-06-09 Awarded the 2016 International Academy of Astronautics Life Science Book Award! Using anecdotal reports from astronauts and cosmonauts, and the results from studies conducted in space analog environments on Earth and in the actual space environment, this book broadly reviews the various psychosocial issues that affect space travelers. Unlike other books that are more technical in format, this text is targeted for the general public. With the advent of space tourism and the increasing involvement of private enterprise in space, there is now a need to explore the impact of space missions on the human psyche and on the interpersonal relationships of the crewmembers. Separate chapters of the book deal with psychosocial stressors in space and in space analog environments; psychological, psychiatric, interpersonal, and cultural issues pertaining to space missions; positive growth-enhancing aspects of space travel; the crew-ground

interaction; space tourism; countermeasures for dealing with space; and unique aspects of a trip to Mars, the outer solar system, and interstellar travel.

Mars The Next Step Arthur E. Smith, 2021-02-27 The conquest of Earth's moon was merely a precursor to a more dramatic step forward, which will take men and women to an outpost that might eventually become a second home for the human race. *Mars: The Next Step* illustrates how the only feasible colonization of another planet in our solar system will be on Mars. The author addresses the various questions surrounding this theory with frank scientific caution that in no way obscures his vigorous enthusiasm and, above all, optimism for mankind's future in space. This vivid and entertaining book explores terraforming (planetary engineering), which could turn Mars into a more congenial environment for humans, both in terms of changing the harsh climate of the planet and the production of plants able to thrive there by means of genetic engineering. The book includes numerous diagrams of possible manned spacecraft, along with color pictures of Mars taken on previous unmanned missions.

Lunar Settlements Haym Benaroya,2010-02-12 Bringing together some of the most recognized and influential researchers and scientists in various space-related disciplines, Lunar Settlements addresses the many issues that surround the permanent human return to the Moon. Numerous international contributors offer their insights into how certain technological, physiological, and psychological challenges must be met to make permanent lunar settlements possible. The book first looks to the past, covering the Apollo and Saturn legacies. In addition, former astronaut and U.S. Senator Harrison H. Schmitt discusses how to maintain deep space exploration and settlement. The book then discusses economic aspects, such as funding for lunar commerce, managing human

resources, and commercial transportation logistics. After examining how cultural elements will fit into habitat design, the text explores the physiological, psychological, and ethical impact of living on a lunar settlement. It also describes the planning/technical requirements of lunar habitation, the design of both manned and modular lunar bases, and the protection of lunar habitats against meteoroids. Focusing on lunar soil mechanics, the book concludes with discussions on lunar concrete, terraforming, and using greenhouses for agricultural purposes. Drawing from the lunar experiences of the six Apollo landing missions to the many American and Soviet robotic missions to current space activities and research, this volume summarizes the problems, prospects, and practicality of enduring lunar settlements. It reflects the key disciplines, including engineering, physics, architecture, psychology, biology, and anthropology, that will play significant roles in establishing these settlements.

Project Genesis National Aeronautics and Space Administration (NASA), 2018-07-27 Project Genesis is a low cost, near-term, unmanned Mars mission, whose primary purpose is to demonstrate in situ resource utilization (ISRU) technology. The essence of the mission is to use indigenously produced fuel and oxidizer to propel a ballistic hopper. The Mars Landing Vehicle/Hopper (MLVH) has an Earth launch mass of 625 kg and is launched aboard a Delta 117925 launch vehicle into a conjunction class transfer orbit to Mars. Upon reaching its target, the vehicle performs an aerocapture maneuver and enters an elliptical orbit about Mars. Equipped with a ground penetrating radar, the MLVH searches for subsurface water ice deposits while in orbit for several weeks. A deorbit burn is then performed to bring the MLVH into the Martian atmosphere for landing. Following aerobraking and

parachute deployment, the vehicle retrofires to a soft landing on Mars. Once on the surface, the MLVH begins to acquire scientific data and to manufacture methane and oxygen via the Sabatier process. This results in a fuel-rich O₂/CH₄ mass ratio of 2, which yields a sufficiently high specific impulse (335 sec) that no additional oxygen need be manufactured, thus greatly simplifying the design of the propellant production plant. During a period of 153 days the MLVH produces and stores enough fuel and oxidizer to make a 30 km ballistic hop to a different site of scientific interest. At this new location the MLVH resumes collecting surface and atmospheric data with the onboard instrumentation. Thus, the MLVH is able to provide a wealth of scientific data which would otherwise require two separate missions or separate vehicles, while proving a new and valuable technology that will facilitate future unmanned and manned exploration of Mars. Total mission cost, including the Delta launch vehicle, is estimated to be \$200 million.
