*Math Lessons for a Living Education Level 1* Angela

O'Dell, 2016-04-06 Have you ever noticed that we tend to compartmentalize when teaching our children? In real life, there aren't artificial barriers between "subjects." For example, when you are cooking or baking, you have to use the skills of reading, logical thinking, and measuring, just to name a few. In driving a car, you see and read road signs, read maps, and count miles. It has become quite clear that there is an abundance of math curriculums available that are nothing but monotonous drill sheets dressed up in pretty colors. Pretty colors do not make a living book. Content, story, and the ability to show math in real life make a living math book. Math Level 1: Teach math lessons through the creative means of a life story Provides a link for the downloadable answer key Has a scope and sequence that contains learning numbers 0 to 100, circles and patterns, counting and addition, days of the week, and telling time. This book was written to be used by you and your young student together. It is the story of a twin brother and sister, Charlie and Charlotte, who are visiting their grandparents' farm. They soon learn that the farm is full of learning opportunities! As you read their story, your students will be drawn into the adventure along with the twins. They will learn about numbers, shapes, place value, adding, and subtracting. They will also learn about gardening, baby animals on the farm, nature, and the love of family. They will hear exciting stories from Grandpa and Grandma, and they will be invited to join the twins on their living math adventures. We hope you have a grand time on this adventure!

*The Verbal Math Lesson Book 2* Michael Levin, Charan Langton, 2014-04 Everyone thinks kids hate math. But the truth is, kids don't hate math they hate worksheets! Writing down equations takes fine motor skills that young children haven't yet developed, making the process of learning math difficult and tedious. Math done mentally, or verbal math, makes math fun. Children see math problems as a game and a challenge. In the second edition of this pioneering educational bestseller, handwriting is removed from math problems to help children cement fundamental mathematical skills so that they may solve problems without having to do any writing at all. Developed as a supplement to traditional math education, the lesson is completely comprehensive, step-by-step, and leaves no area undone. The second book of the series is meant for children between the ages of 7 and 8.

**Creative Math for Class 1** Gaurish Borkar, 2019-08-20 It's interesting to see and experience how kids learn. It's also interesting to develop something that kids enjoy. Mathematics is man made subject. Some kids get it quickly and some of them don't. When we were in school the learning was more Verbal and now a days it is more Visual. In fact, kids are more kinaesthetic and they enjoy doing and feeling something all the time. Due to this, some kids don't enjoy school. Math is an abstract topic and it's also challenging to develop interesting activities for math. Traditional Indian math was action based and has few activity-based methods. Therefore, I have also included few Vedic methods in this course without referring them as Vedic methods. Because such methods also link to Vedic math, this may help to transition easily to mental math. If your son or daughter is hyper active then he might enjoy activities more than anything else. Similarly, if your kid is Shy then she might want to experience more. Therefore, for both such kids, activity-based learning is essential. This book is totally activity based and may suit to such kids very well. Every arithmetic operation is done using some activity like drawing or acting. Some of the activities are also paper based. Caution has been taken to ensure that you may cover all the activities with things easily available at home so you need not buy anything specific for these activities. These methods can be introduced to kids at the age of 6 or more and they cover curriculum of class 1. The book mainly consists of simple and easy methods of addition and subtraction. I have also included few games to increase the fun during the learning. I am confident that this is fun and joyful

journey to all the students and their parents. I wish you all the best for more love towards mathematics.
