The volume is divided into three main sections: basic science, neuroendocrinology, and clinical science. Included are over 30 chapters on topics such as neuropharmacology, insomnia, depression, dementia, autism, and schizophrenia. Relevant questionnaires for the assessment of sleep disorders, including quality-of-life measurement tools, are provided. There is also a summary table of drugs for treating sleep disorders. This interdisciplinary text will be of interest to clinicians working in psychiatry, behavioral sleep medicine, neurology, pulmonary and critical care medicine.

The Grizzly Maze Nick Jans,2006-01-31 With a new introduction on Werner Herzog's film entitled The Grizzly Man Timothy Treadwell, self-styled "bear whisperer" dared to live among the grizzlies, seeking to overturn the perception of them as dangerously aggressive animals. When he and his girlfriend were mauled, it created a media sensation. In The Grizzly Maze, Nick Jans, a seasoned outdoor writer with a quarter century of experience writing about Alaska and bears, traces Treadwell's rise from unknown waiter in California to celebrity, providing a moving portrait of the man whose controversial ideas and behavior earned him the scorn of hunters, the adoration of animal lovers and the skepticism of naturalists. "Intensely imagistic, artfully controlled prose . . . behind the building tension of Treadwell's path to oblivion, a stunning landscape looms."—Newsday

Andean Cocaine Paul Gootenberg,2009-06-01 Illuminating a hidden and fascinating chapter in the history of globalization, Paul Gootenberg chronicles the rise of one of the most spectacular and now illegal Latin American exports: cocaine. Gootenberg traces cocaine's history from its origins as a medical commodity in the nineteenth century to its repression during the early twentieth century and its dramatic reemergence as an illicit good after World War II. Connecting the story of the drug's transformations is a host of people, products, and processes: Sigmund Freud, Coca-Cola, and Pablo Escobar all make appearances, exemplifying the global influences that have shaped the history of cocaine. But Gootenberg decenters the familiar story to uncover the roles played by hitherto obscure but vital Andean actors as well—for example, the Peruvian pharmacist who developed the techniques for refining cocaine on an industrial scale and the creators of the original drug-smuggling networks that decades later would be taken over by Colombian traffickers. Andean Cocaine proves indispensable to understanding one of the most vexing social dilemmas of the late twentieth-century Americas: the American cocaine epidemic of the 1980s and, in its wake, the seemingly endless U.S. drug war in the Andes.

Molecular Neurosurgery with Targeted Toxins Ronald G. Wiley, Douglas A. Lappi, 2007-10-10 Pioneers and leading researchers explain the theory and techniques of using targeted toxins experimentally. The highly successful use of the 192 IgG-saporin and ME20.4-saporin immunotoxins to lesion the cholinergic basal forebrain in order to model the behavior, anatomy, physiology, and pharmacology of Alzheimer's disease in animals is treated in detail to give a potential user the knowledge to comfortably use the techniques involved. The uses of important new lesioning agents such as anti-DBH-saporin immunotoxin to make remarkably selective lesions of catecholaminergic neurons, hypocretin-saporin that can produce narcoleptic animals, and other saporin conjugates, such as neuropeptide-saporin conjugates for pain research and cholera toxin B chain-saporin to produce a model of CNS demyelination are explained by experts in the field.

Biodiversity and Chemotaxonomy Kishan Gopal Ramawat, 2019-11-10 Plant classifications are based on morphological characters and it is difficult, particularly in small plants and grasses, to identify these below generic level on the basis of these characters using a dissecting microscope. Plant species have intra- and inter-specific variation in secondary metabolites which can be utilized as marker compounds for identification and classification of plants. Secondary metabolites are produced as a result of primary metabolism and the production of these compounds not only involves several genes but also it is an energy dependent process. Hence these products cannot be considered as insignificant for the plant and the environment. Modern tools of molecular biology and secondary metabolites present in them can definitively decide about classification of plants. Absence of correct identification of plant is associated to many problems of resource utilization. Due to wide availability of these tools, interest has revived in systematics and correct classification of plants based on these parameters for their sustainable utilization and resource management. The purpose of this book is to assess the potential of phytochemical and molecular tools in the systematic and classification of plants. The topics covered include species concept, barcoding and phylogenetic analysis, chemotaxonomy use of polyketides, carotenes, cuticular wax, volatile oils, biodiversity of corals, metazoans, Ruta and Echinocereus. It provides comprehensive and broad subject-based reviews, useful for students, teachers, researchers, and all others interested in the field. The field has been kept wide and general to accommodate the wide-ranging topics. This book will be useful to agriculturists, chemists, botanists, industrialists, and those involved in planning of crop plants.

Bulgaria International Monetary Fund, 1996-02-15 This paper reviews economic developments in Bulgaria during 1990-95. In 1993, GDP continued to contract, albeit more slowly than previously. Real GDP declined by 2.4 percent owing to a drought-induced collapse in agricultural output. As consumption-driven imports rose and exports fell, the lower real GDP in 1993 was accompanied by a large current account deficit. The adoption of restrictive fiscal and incomes policies in 1994 enabled Bulgaria to retain the gains in external competitiveness acquired from the nominal depreciation.
