*The Arabian Parts Decoded* Lind Weber, 2007-03 An all-encompassing work on the ancient techniques of the Arabian parts, also called Points, Lots & Fortunes. The author thoroughly explains how to formulate the Arabian Parts for any event or question & their use in natal charts & in forecasting.

*The Fortunes of Astrology* Robert Hurzt Granite, 1985

*Astronomy and Astrology in the Medieval Islamic World* Edward S. Kennedy, Edward Stewart Kennedy, 1998 This collection of studies by Edward Kennedy looks first at questions of spherical astronomy, celestial mapping and planetary models, and then deals with astrological calculations. Throughout the author emphasises the importance of advances in mathematics for understanding the development of medieval Arabic sciences. This collection of studies based on previously unexploited manuscript sources in Arabic and Persian. They were written by authors from the 9th through the 15th centuries, whose locations reached from south China in the east through Central Asia, the Middle and Near East, and North Africa, to Spain in the west. The topics are predominately astronomical rather than astrological. The former include eclipse predictions, problems in spherical astronomy, non-ptolemaic planetary theory, and the achievements of Ulugh Beg and his observatory. Astrological subjects treated are the method of calculating the ascendant, and how to determine astrological houses and lots. An astrological history of the career of Genghis Khan is also described.

**Ancient Arabic Astrology** Angila Solomon, 2020-05-17 Ancient Arabic Astrology is a valuable book that designates and explains an ancient esoteric mystery tradition of foretelling that has been shrouded in mystery to most of the world. Arabic astrology is still quite unknown astrology, despite its antiquity. It's based, above all, on the idea that there are opportunities offered to us from our

birth to our advancement in life, and in the study of our real abilities, of our character, one can foretell the future. In recent years, the circumstances somewhat have changed, and a new passion has emerged in Arabic astrology and esoterics. Sadly, most of the literature concerning Arabic astrology came in a deformed and incomplete view of Arabic Astrology. A view that reduced the vastness of Arabic astrology signs to a mere date of the birth sign. In doing so it neglected most of what is peculiar to Arabic Astrology and which differentiates it from Chinese and western astrology.

The Lost Key to Prediction Robert Zoller, Guido Bonatti, 1980-01-01

*Works of Sahl & Masha'allah* Sahl Ibn Bishr, Masha'allah, 2008 Sahl bin Bishr (Zahel) and Masha'allah were two of the most influential medieval astrologers from the Arabic period. This essential work in medieval astrology translates 16 of their works, most for the first time, and includes many charts and lengthy introductory remarks and explanations by the translator.

**Arabic Astronomical and Astrological Sciences in Latin Translation** Francis James Carmody, 1956

**The Arabic Parts in Astrology** Robert Zoller, 1989-05-01 Dating from antiquity, the doctrine of the Arabic parts has been virtually lost to Western astrological practice since the 17th century. In his book, Robert Zoller retrieves this valuable key to prediction and provides a clear and simple guide to its practical application. The Arabic parts enable the astrologer to investigate the “inner” meaning of the horoscope and thus to go beyond the “outer” aspects expressed by the arrangement of the planets, signs, and houses. The first section of the book explains how fate, or karma, can be understood through the parts and the esoteric nature of number. The second section includes a translation of the 13th-century Latin text on the parts by the famed court astrologer, Bonatti; this work includes the basic ninety-seven parts, dealing with all areas of life--from war, commodities

speculation, and professional life to marriage and partnerships--in addition to the seventy-three parts from various medieval sources. In the third section of the book, the author illustrates the practical use of the parts in natal, horary, and mundane astrology. His understanding of the parts and their place in a comprehensive interpretation of any horoscope is presented with lucidity and insight , unraveling for the reader this fascinating and long-neglected astrological science.

A Compilation on the Science of the Stars Leopold of Austria, 2015-09-21 Leopold of Austria's 13th Century Compilation of the Science of the Stars is a well-known collection of numerous Arabic astrologers' works excerpted in Latin. Sometimes called a shorter Bonatti, Leopold discusses traditional astronomy, basic interpretive principles, Lots or Arabic Parts, natal astrology, questions or horary, mundane topics such as weather and wars, elections, and even material on using astrological talismans. This book was translated and edited by Benjamin Dykes, whose long experience with the source texts makes Leopold's text more readable and understandable, correcting many errors committed by the medieval editors and typesetters. With numerous special Comments, tables, and diagrams added by Dykes in addition to Leopold's own images, the Compilation is a handy resource for students and experts in medieval Western astrology.

*Astronomy and Astrology in Al-Andalus and the Maghrib* Julio Samsó, 2007 This new volume of papers by Julio Samsó deals with the development of astronomy and astrology in al-Andalus and the Maghrib between the 10th and the 19th centuries. Opening with a survey of the social history of the exact sciences in al-Andalus, the book then looks at astronomical tables in use during this period. The author also deals with theoretical astronomy, with the use of zijes for the calculation of horoscopes, and an experimental astrological method for the correction of mean motion planetary tables.

**The Sun of Knowledge (Shams Al-Ma'arif)** Ahmad ibn 'Ali al-Buni, 2021-10-31 The Sun of Knowledge (Shams al-Ma'arif) is one of the most revered historical grimoires of the Arabic corpus. Feared by some, hallowed by others, it is one of the most famous - or infamous - books in the Arabic-speaking and Islamic world. Written in Egypt in the thirteenth century by a Sufi mystic and mage of Algerian origin, the Shams presents the fundamentals of Arabic-Islamic occult work - from spiritual cosmology and astrology (including various particularly lunar magics) to working with spirits and jinn, magical employment of letters and numbers, and the occult applications of the Qur'an - thereby comprising a veritable encyclopedia of Islamic magical wisdom and formulae. Images and descriptions of amulets and talismans adorn it. Numerous beautiful manuscripts of the Sun of Knowledge have survived, various of which have been used as a basis for this present work. Never before published in English, this selected translation includes sections of the Sun of Knowledge on the mysteries of the letters, astrological timings, lunar mansions, the ancient Arab beliefs surrounding the stars, planetary matters, astronomy, the angels and workings pertaining to the four seasons, summoning the jinn, the employment of the names of God for many and varied purposes, the construction of the famed ring of Solomon, and a miscellany of tried-and-true talismans. This selected translation takes a general approach to a much vaster text, and features illustrations, original artwork, and commentary to assist those unfamiliar with Islamic magic and culture. This edition is also ideal for any student of magic or the occult, classical Arabic astrology and astronomy, Islamic esotericism, or Sufism.

**Astrology and Cosmology in Early China** David W. Pankenier, 2013-10-10 The ancient Chinese were profoundly influenced by the Sun, Moon and stars, making persistent efforts to mirror astral phenomena in shaping their civilization. In this pioneering text, David W. Pankenier

introduces readers to a seriously understudied field, illustrating how astronomy shaped the culture of China from the very beginning and how it influenced areas as disparate as art, architecture, calendrical science, myth, technology, and political and military decision-making. As elsewhere in the ancient world, there was no positive distinction between astronomy and astrology in ancient China, and so astrology, or more precisely, astral omenology, is a principal focus of the book. Drawing on a broad range of sources, including archaeological discoveries, classical texts, inscriptions and paleography, this thought-provoking book documents the role of astronomical phenomena in the development of the 'Celestial Empire' from the late Neolithic through the late imperial period.

**The Scientific Revolution in National Context** Roy Porter, 1992-09-25 The 'scientific revolution' of the sixteenth and seventeenth century continues to command attention in historical debate. Controversy still rages about the extent to which it was essentially a 'revolution of the mind', or how far it must also be explained by wider considerations. In this volume, leading scholars of early modern science argue the importance of specifically national contexts for understanding the transformation in natural philosophy between Copernicus and Newton. Distinct political, religious, cultural and linguistic formations shaped scientific interests and concerns differently in each European state and explain different levels of scientific intensity. Questions of institutional development and of the transmission of scientific ideas are also addressed. The emphasis upon national determinants makes this volume an interesting contribution to the study of the Scientific Revolution.

**Indonesian Syariah** M. B. Hooker, 2008 Discusses the creation a national school of Islamic law in Indonesia. Presents a complex range of references for syariah including the formal structures of a

'new fiqh', philosophies of law, transmissions of syariah through tertiary curricula and the Friday sermon in mosques, a bureaucratic form for conducting the Hajj, and contemporary debates on syariah values as expressions of public morality.

*Islamic Law, Epistemology and Modernity* Ashk Dahlen, 2004-03-01 This study analyses the major intellectual positions in the philosophical debate on Islamic law that is occurring in contemporary Iran. As the characteristic features of traditional epistemic considerations have a direct bearing on the modern development of Islamic legal thought, the contemporary positions are initially set against the established normative repertory of Islamic tradition. It is within this broad examination of a living legacy of interpretation that the context for the concretizations of traditional as well as modern Islamic learning, are enclosed.

**Investigations into Magic, an Edition and Translation of Martín Del Río's *Disquisitionum magicarum libri sex*** Peter Maxwell-Stuart, José Manuel García Valverde, 2022-06-13 The most comprehensive treatise on all aspects of magic, witchcraft, and allied subjects produced in the early modern period.

*Nativity: The Christmas Story, Which You Have Never Heard Before* Richard R. Racy, 2007-11 Sometimes reading like a historical novel, or a forensics detective story, a melodrama, or a scientific adventure, *Nativity* takes the reader on a fast, awesome ride of discovery into the real history and real people behind the birth of Christ. *Nativity* is the ideal reference for pastors, students, and laymen, combining scholarly depth and reliability in a popular writing style easily accessible to all with references for independent study. New elements of meaning and relevance to the *Nativity* Scientific evidence virgin births occur as often as identical twins but Jesus was one of a kind The life and death drama behind Joseph and Mary rarely told The real events of Bethlehem and Nazareth

Herod amazing genius whose architecture excelled Rome, and kept his murdered wife in a jar of honey! Was Jesus incarnated from the time of the Fall? Is the Christmas tree a pagan idol or a biblical image of the Tree of Life? While vigorously defending the traditional faith, Richard Racy gives new insights and new theological perspectives guaranteed to inform and provoke while entertaining in a major new work on the birth of Jesus Christ.

**The Making of Yeats's A Vision** George Mills Harper, 1987 According to Yeats, his wife surprised him on 24 October 1917, four days after their marriage, "by attempting automatic writing." Excited, he offered to spend the remainder of his life organizing and explaining the "scattered sentences." Over a period of approximately 30 months they collaborated in 450 sittings, he asking questions, she responding to fill a total of more than 3,600 pages. Quoting copiously from the Script, Harper has traced in two volumes these incredible experiments day by day as the Yeateses moved about England, Ireland, and America. He has also cited hundreds of parallel explanatory passages from many workbooks, notebooks, and the concordance arranged like a card index in which Yeats codified the System he projected in A Vision and numerous poems and plays. Harper also has examined the extensive personal revelations that were excluded from A Vision and carefully concealed in many passages of "personal Script." As Professor Harper demonstrates, Yeats had these often oblique, highly allusive passages in mind when he admitted "To Vestigia" that he had "not even dealt with the whole of my subject, perhaps not even with what is most important, writing nothing about the Beatific Vision, little of sexual love."

**Anatomy and Anatomists in Early Modern Spain** Bjørn Okholm Skaarup, 2016-03-09 Taking

the Vesalian anatomical revolution as its point of departure, this volume charts the apparent rise and fall of anatomy studies within universities in sixteenth-century Spain, focussing particularly on primary sources from 1550 to 1600. In doing so, it both clarifies the Spanish contribution to the field of anatomy and disentangles the distorted political and historiographical viewpoints emerging from previous research. Studies of early modern Iberian science have only been carried out coherently and collaboratively in the last few decades, even though fierce debates on the subject have dominated Spanish historiography for more than two centuries. In the field of anatomy studies, many uninformed and biased readings of archival sources have resulted in a very confused picture of the practice of dissection and the teaching of anatomy in the Iberian Peninsula, in which the highly complex conditions of anatomical research within Spain's national context are often oversimplified. The new empirical evidence that this book brings to light suggests a far more multifaceted narrative of Iberian Renaissance anatomy than has been presented to date.
