Advances in National Brand and Private Label Marketing Juan Carlos Gázquez-Abad, Francisco J. Martínez-López, Katrijn Gielens, 2023-05-19 The 2023 International Conference on National Brand & Private Label Marketing is a unique academic forum to present and discuss original, rigorous, and significant contributions from researchers around the world on marketing issues facing retailers, store brand managers and national brand managers. The two-day event covered a wide range of topics from varied fields including retailing, marketing, general business, psychology, economics and statistics. The conference addressed diverse areas of application such as branding strategies, innovation in private labels, private label consumers, customer databases, Covid-19 consequences, loyalty programs, sustainability, and online grocery retailing, among others. A wide variety of theoretical and methodological approaches have been used in these areas. This volume presents the proceedings of this 2023 NB&PL marketing conference in a collection of original, rigorous, and relevant contributions.

Social Psychology Robbie Sutton, Karen Douglas, 2019-11-12 The eagerly anticipated second edition of this popular textbook captures the excitement and relevance to everyday life of the fascinating and fast-moving field of social psychology. This book is a comprehensive and lively guide to the subject that extensively reappraises classic studies, highlights cutting-edge areas of research and provides fascinating examples of how social psychological theory and research apply to a wide range of real-world issues such as fake news, internet addiction and cyberbullying. Innovative interactive features, including 'exploring further' activities, 'applying social psychology' exercises and 'student project spotlights', place the student experience at the heart of this book. Its engaging and inclusive approach helps students to develop a strong and nuanced understanding of key topics in social psychology and also encourages broader skills that will help not only in their studies but their future careers. This is the ideal textbook for students studying social psychology. New to this Edition: - Thoroughly revised to highlight the most up-to-date research in the discipline and re-appraise classic studies, theories and perspectives on topics such as obedience, bystander intervention and the Stanford Prison Experiment. - The introductory chapter includes a new guide to critical thinking which outlines theory and research on what critical thinking involves and provides useful guidance for students on how to become effective critical thinkers. - Important coverage of the reproducibility of social psychological research. - More examples of how social psychological theory and research apply to current real-world issues such as fake news, internet addiction, human-animal relations, intergroup conflict, cyberbullying and politics. - Up-to-date coverage of the impact of online communication and social media on social psychological phenomena. - A distinctive final chapter summarising key points of wisdom in social psychology and skills that students can gain from their studies. The Handbook of Attitudes, Volume 1: Basic Principles Dolores Albarracín, Blair T. Johnson, 2018-10-10 Attitudes are evaluations of people, places, things, and ideas. They help us to navigate through a complex world. They provide guidance for decisions about which products to buy, how to travel to work, or where to go on vacation. They color our perceptions of others. Carefully crafted interventions can change attitudes and behavior. Yet, attitudes, beliefs, and behavior are often formed and changed in casual social exchanges. The mere perception that other people favor something, say, rich people, may be sufficient to make another person favor it. People's own actions also influence their attitudes, such that they adjust to be more supportive of the actions. People's belief systems even change to align with and support their preferences, which at its extreme is a form of denial for which people lack awareness. These two volumes provide authoritative, critical surveys of theory and research about attitudes, beliefs, persuasion, and behavior from key authors in these areas. The first volume covers theoretical notions about attitudes, the beliefs and behaviors to which they are linked, and the degree to which they are held outside of awareness. It also discusses motivational and cultural determinants of attitudes, influences of attitudes on behavior, and communication and persuasion. The second volume covers applications to measurement, behavior prediction, and interventions in the areas of cancer, HIV, substance use, diet, and exercise, as well as in politics, intergroup relations, aggression, migrations, advertising, accounting, education, and the environment.

Handbook of Research on Disruptive Innovation and Digital Transformation in Asia Ordóñez de Pablos, Patricia, Zhang, Xi, Almunawar, Mohammad Nabil, 2021-05-28 With new technologies constantly being created, implemented, and sold, it is a robust opportunity for companies to hop on board with the latest digital trends. With the business world undergoing rapid changes and advancements in current times, the transformation process has been rapid and the disruptions significant. This has created a culture of innovation and a plethora of available business opportunities, especially when focused on Central Asia, Southeast Asia, and East Asia. Along with these innovative technologies and new opportunities in the business world comes challenges and trends within the Asian region that require more attention and advanced research to fully understand this digital transformation era and the resulting

impacts, challenges, and solutions. The Handbook of Research on Disruptive Innovation and Digital Transformation in Asia addresses key topics for understanding business opportunities in Asia, covering a variety of challenges and nations in the Asian region from technological disruption and innovation to connectivity and economic corridors in Asia, Islamic finance and tourism, and more. Due to its innovative topics and approaches, geographical focus, and methodologies, the chapters provide readers with a unique value in bringing new perspectives to understanding emerging businesses and challenges in Asia. This book is ideal for professors in academia, deans, students, politicians, policymakers, corporate heads of firms, senior general managers, managing directors, information technology directors and managers, and researchers.

Parenting Matters National Academies of Sciences, Engineering, and Medicine, Division of Behavioral and Social Sciences and Education, Board on Children, Youth, and Families, Committee on Supporting the Parents of Young Children, 2016-11-21 Decades of research have demonstrated that the parent-child dyad and the environment of the family—which includes all primary caregivers—are at the foundation of children's well-being and healthy development. From birth, children are learning and rely on parents and the other caregivers in their lives to protect and care for them. The impact of parents may never be greater than during the earliest years of life, when a child's brain is rapidly developing and when nearly all of her or his experiences are created and shaped by parents and the family environment. Parents help children build and refine their knowledge and skills, charting a trajectory for their health and well-being during childhood and beyond. The experience of parenting also impacts parents themselves. For instance, parenting can enrich and give focus to parents' lives; generate stress or calm; and create any number of emotions, including feelings of happiness, sadness, fulfillment, and anger. Parenting of young children today takes place in the context of significant ongoing developments. These include: a rapidly growing body of science on early childhood, increases in funding for programs and services for families, changing demographics of the U.S. population, and greater diversity of family structure. Additionally, parenting is increasingly being shaped by technology and increased access to information about parenting. Parenting Matters identifies parenting knowledge, attitudes, and practices associated with positive developmental outcomes in children ages 0-8; universal/preventive and targeted strategies used in a variety of settings that have been effective with parents of young children and that support the identified knowledge, attitudes, and practices; and barriers to and facilitators for parents' use of practices that lead to healthy child outcomes as well as their participation in effective programs and services. This report makes recommendations directed at an array of stakeholders, for promoting the wide-scale adoption of effective programs and services for parents and on areas that warrant further research to inform policy and practice. It is meant to serve as a roadmap for the future of parenting policy, research, and practice in the United States.

Communication and Social Cognition David R. Roskos-Ewoldsen, Jennifer L. Monahan, 2009-03-04 Communication and Social Cognition represents the explosion of work in the field of social cognition over the past 25 years. Expanding the contribution made by Social Cognition and Communication, published in 1982, this scholarly collection updates the study of communication from a social cognitive perspective, with contributions from well-known experts and promising new scholars in diverse areas of communication. Organized into sections—message production, interpersonal communication, media, and social influence—the collection reflects the areas in which social cognition theories have become integral in understanding communicative processes, and in which a proliferation of scholarship has emerged. Readers are informed of the current major trends in social cognition research, and are introduced to its history. Throughout the text, chapter authors highlight both theoretical and methodological aspects of research, encouraging communication scholars to include social cognition in their research, and, likewise, promoting communication to social cognition researchers. The volume addresses the future of social cognition, including the most fitting directions in which to take scholarship, emerging theories in the field, and the methods currently yielding the most promising results. Communication and Social Cognition appeals to scholars, researchers, and advanced students in communication and psychology. It can be used as a textbook in graduate courses related to social cognition, social influence, message production, interpersonal communication, media effects, and message design.

The Handbook of Attitudes Dolores Albarracín, Blair T. Johnson, Mark P. Zanna, 2014-04-04 This new handbook presents, synthesizes, and integrates the existing knowledge of methods, theories, and data in attitudes. The editors' goal is to promote an understanding of the broader principles underlying attitudes across several disciplines. Divided into three parts: one on definitions and methods; another on the relations of attitudes with beliefs, behavior, and affect; and a final one that integrates these relations into the broader areas of cognitive processes, communication and persuasion, social influence, and applications, the handbook also features an innovative chapter on implicit versus explicit attitudes. With contributions from the top specialists, this handbook features unique collaborations between researchers, some who have never before worked together. Every writer was encouraged to work from as unbiased a perspective as possible. A must have for researchers in the areas of social, political, health, clinical, counseling, and consumer psychology, marketing, and communication, the handbook will also serve as an excellent reference for advanced courses on attitudes in a variety of departments.

Handbook of Trial Consulting Richard L. Wiener,Brian H. Bornstein,2011-05-06 This volume will be a handbook that treats trial consulting as applied psychology. The purpose of the volume will be to collect the viewpoints of leaders in the field of psychology and law who apply the discipline's theoretical models, methods, and ethics to assist litigators to try cases in the most effective way possible. As a whole, the collection of chapters will describe the theory, business, and mechanics of trial consulting for those interested in learning and practicing the profession. However, it will do so from the perspective of organized theories of jury-decision making. In other words, the work of juror researchers will inform the recommendations and suggestions in the handbook. The volume consists of six sections, each pertaining to a different topic. Multiple chapters with different authors will cover each topic. The topics and corresponding seven sections will be 1) An Introduction to the Theory and Psychology of Jury Decision-Making, 2) Applied Research Methodologies for Trial Consultants, 3) Education and Ethical Considerations for Trial Consultants, 4) Preparing and Cross Examining Witnesses, 5) Technology and Demonstrative Evidence at Trial, and 6) Special Topics in Trial Consulting. Each section will begin with the editors' short introduction reviewing that section and explaining its goals, objectives, and content. Separate individuals, recognized as leaders in their areas will write the remaining chapters in each section. These individuals come from the fields of both psychology and law, and represent viewpoints on these topics from a practice-oriented perspective, but a perspective that is emerges from research results. They are affiliated with a number of academic institutions, including University of Nebraska, John Jay College of Criminal Justice, University of Texas, University of Chicago Simon Fraser University, and private law firms.

Mediated Identities and New Journalism in the Arab World Aziz Douai,Mohamed Ben Moussa,2016-11-14 This book looks into the role played by mediated communication, particularly new and social media, in shaping various forms of struggles around power, identity and religion at a time when the Arab world is going through an unprecedented period of turmoil and upheaval. The book provides unique and multifocal perspectives on how new forms of communication remain at the centre of historical transformations in the region. The key focus of this book is not to ascertain the extent to which new communication technologies have generated the Arab spring or led to its aftermaths, but instead question how we can better understand many types of articulations between communication technologies, on the one hand, and forms of resistance, collective action, and modes of expression that have contributed to the recent uprisings and continue to shape the social and political upheavals in the region on the other. The book presents original perspectives and rigorous analysis by specialists and academics from around the world that will certainly enrich the debate around major issues raised by recent historical events.

Women in Mathematics Andrea Lenzner, Detlef H Rost, International statistics show that the percentage of women studying mathematics and natural sciences varies greatly between different countries and regions of the world. For example, it is much higher in Eastern and Southern European, Arab and South American countries than in the Scandinavian and Central European countries. This monograph explores the great extent to which the female enrollment rate in mathematics and mathematics-related fields varies in different countries and regions of the world, while also investigating the underlying cultural factors that affect women's differential enrollment rates. The analyses include historical, societal, and psychological variables at the level of culture and also suggest that the psychological constructs of attitude and self-concept play an important role in explaining cross-cultural differences in women's enrollment rates

Attitude Research in Science Education Dr. Issa M. Saleh,Dr. Myint Swe Khine,2011-02-01 The research into how students' attitudes affect their learning of science related subjects has been one of the core areas of interest by science educators. The development in science education records various attempts in measuring attitudes and determining the correlations between behavior, achievements, career aspirations, gender identity and cultural inclination. Some researchers noted that attitudes can be learned and teachers can encourage students to like science subjects through persuasion. But some view that attitude is situated in context and has much to do with upbringing and environment. The critical role of attitude is well recognized in advancing science education, in particular designing curriculum and choosing powerful pedagogies and nurturing students. Since Noll's (1935) seminal work on measuring the scientific attitudes, a steady stream of research papers describing the development and validation of scales have appeared in scholarly publications. Despite these efforts, the progress in this area has been stagnated by limited understanding of the conception of attitude, dimensionality and inability to determine the multitude of variables that made up such concept. This book makes an attempt to take stock and critically examine classical views on science attitudes and explore contemporary attempts in measuring science-related attitudes. The chapters in this book are a reflection of researchers who work tirelessly in promoting science education and highlight the current trends and future scenarios in attitude measurement.
